^a U. S. G. S., Min. Res. of U. S., 1886, p. 440, for quantities to and including 1886.
^b Values have been estimated for the years to and including 1886, after consulting a number of contemporaneous publications, including the Mining & Scientific Press, Reports of the State Mineralogist, and U. S. Reports. The figures for 1887 to date are from records of the State Mining Bureau.

Specific Gravities of Oils Produced.

The proportion of heavy and light oil produced in the various fields is shown in Table C, following, for which we are indebted to the Standard Oil Company. Under present practice, oil below 18° Baumé may be considered as largely refinable for fuel oil and lubricants, while the lighter oils yield varying amounts of the higher refined products with corresponding proportions of residuum and fuel oil. Specific gravities in California range from 8° Baumé in the Casmalia field, Santa Barbara County, to 56° Baumé in Ventura County.

California crude oils are all essentially of asphalt base, with a few notable exceptions. In the following localities are wells yielding crudes containing both asphalt and paraffine constituents: Oil City field, Coalinga; a few deep wells in East Side field, Coalinga; a considerable part of the Ventura County fields; Western Minerals area, south of Maricopa; Wheeler Ridge, Kern County.

TABLE C.
Production of Light and Heavy Oil, by Fields, 1923.

| | Under 18° (barrels) | 18° and over (barrels) | Total (barrels) |

Oil in 'Storage.'

Field, refinery, pipe-line and tank-farm stocks of crude, residuum and tops totaled 91,925,153 barrels¹ on December 31, 1923, compared with 61,384,164 barrels on December 31, 1922, distributed as follows:

| | Dec. 31, 1923 | Dec. 31, 1922 |
|--|---------------|---------------|
| Heavy crude, heavier than 20° A. P. I., including residuum..... | 43,614,271 | 40,857,761 |
| Refinable crude, 20° A. P. I. and lighter..... | 35,559,054 | 17,613,591 |
| Tops..... | 12,751,828 | 2,912,812 |
| Totals..... | 91,925,153 | 61,384,164 |
| Total quantity of above products held at refineries..... | 29,763,653 | 11,809,691 |
| Total quantity of above products held in fields, pipe-lines, and tank-farms..... | 62,161,500 | 49,574,473 |
| Total stocks as above..... | 91,925,153 | 61,384,164 |

Proved Oil Land.

The total proved oil land of the state increased to 116,868 acres in 1923, from the 112,761 acres of 1922. Kern County increased 3395 acres, and Los Angeles, 1089 acres. Of this 1923 total, 19,932 acres, being owned by federal, state and city governments or for other reasons, are not assessable for the support of the Department of Petroleum and Gas of the State Mining Bureau. The acreage in 1923 was distributed by counties as follows:

¹Standard Oil Bulletin, February 1924, p. 11.

TABLE D.

Proved Oil Land and Number of Wells, 1923.

| County | Land (acres) | Number wells |
|----------------------|--------------|--------------|
| Fresno..... | 14,600 | 883 |
| Kern..... | 72,371 | 5,817 |
| Los Angeles..... | 8,558 | 1,780 |
| Orange..... | 7,242 | 915 |

| Totals..... | 116,868 | 10,332 |

PUMICE AND VOLCANIC ASH.

The production of pumice and volcanic ash for the year 1923 amounted to 2936 tons valued at \$16,309 and came from properties in Imperial, Inyo and Kern counties. This is an increase both in tonnage and value over the 1922 shipments. The material from Imperial County is of the vesicular, block variety and was sold for abrasive purposes and for concrete aggregate; that from Inyo and Kern is the volcanic ash, or tuff, variety and was employed in making soap and cleanser compounds.

Total Pumice Production of California.

Commercial production of pumice in California was first reported to the State Mining Bureau in 1909, then not again until 1912, since which year there has been a small annual output, as indicated by the following table:

| Year | Tons | Value | Year | Tons | Value |
|-----------|-------|--------|-------------|--------|-----------|
| 1909..... | 50 | \$500 | 1917..... | 525 | \$5,295 |
| 1910..... | ----- | ----- | 1918..... | 2,114 | 28,669 |
| 1911..... | ----- | ----- | 1919..... | 2,388 | 43,657 |
| 1912..... | 100 | 2,500 | 1920..... | 1,537 | 25,890 |
| 1913..... | 3,590 | 4,500 | 1921..... | 406 | 6,310 |
| 1914..... | 50 | 1,000 | 1922..... | 613 | 4,248 |
| 1915..... | 380 | 6,400 | 1923..... | 2,936 | 16,309 |
| 1916..... | 1,246 | 18,092 | Totals..... | 15,935 | \$163,370 |

QUICKSILVER.

Quicksilver was produced in California in nine counties during 1923, to the amount of 5458 flasks, valued at \$332,851, being approximately a 60% increase both in amount and value over the 1922 output of 3466 flasks and \$191,851. The average price received during 1923, according to the producers' reports to the State Mining Bureau, was \$60.98 per flask, as against \$55.35 in 1922, and the record average of \$114.03 for the year 1918.

The average of San Francisco quotations for 1923 was \$65.68 per flask, the price declining from \$70.70 in the first week of January to \$59.75 in the last week of December. For the current year, 1924, the quotations are ranging somewhat higher.

According to the Bureau of Foreign and Domestic Commerce records, there was imported a total of 18,073 flasks of quicksilver in 1923, mainly from Spain and Italy; and there was 318 flasks exported.

The tariff act of 1922 provides for an import duty of 25 cents per pound, or \$18.75 per flask (75 pounds, net), which became effective September 21, 1922.

The U. S. Geological Survey reports the total production of the United States for 1923 at 7937 flasks, valued at \$521,302 (using the \$65.68 average of quotations). Outside of California, the principal yield was from Texas, with a few flasks from Nevada, Oregon and Idaho. California's contribution was 69% of the total.

The increase in 1923 was due to resumption of production at the New Idria mine, San Benito County. There was no production from the Guadalupe mine, Santa Clara County, nor from the Oceanic mine, San Luis Obispo County. A rotary furnace has been installed at the Rinconada mine, in the latter county, and production begun.

The 1923 quicksilver production of California was distributed by counties, as follows:

Quicksilver Production by Counties, 1923.

| County | Flasks | Value |
|---|--------|-----------|
| Lake..... | 17 | \$1,050 |
| Napa..... | 157 | 9,759 |
| Sonoma..... | 528 | 31,147 |
| Kings, Monterey, San Benito, San Luis Obispo, Santa Clara, Solano*..... | 4,758 | 290,895 |
| Totals..... | 5,458 | \$332,851 |

*Combined to conceal output of a single operator in each.

Total Quicksilver Production of California.

Total amount and value of the quicksilver production of California, as shown in available records, is given in the following tabulation:

| Year | Flasks | Value | Average price per flask | Year | Flasks | Value | Average price per flask |
|--------|--------|-----------|-------------------------|-------|-----------|---------------|-------------------------|
| 1850 | 7,723 | \$768,032 | \$99 45 | 1887 | 33,760 | 1,430,749 | \$42 38 |
| 1851 | 27,779 | 1,859,248 | 66 93 | 1888 | 33,250 | 1,413,125 | 42 50 |

SALT.

Most of the salt produced in California is obtained by evaporating the waters of the Pacific Ocean, plants being located on the shores of San Francisco, Monterey and San Diego bays, and at Long Beach. Additional amounts are derived from lakes and lake beds in the desert regions, mainly in Kern and San Bernardino counties. A small amount of valuable medicinal salts is obtained by evaporation of the water of Mono Lake, Mono County.

Distribution of the 1923 salt production of California, by counties was as follows:

| County | Tons | Value |
|--|---------|-------------|
| Alameda..... | 177,389 | \$585,585 |
| Kern..... | 18,921 | 97,336 |
| San Bernardino..... | 17,350 | 65,550 |
| San Mateo..... | 35,757 | 199,192 |
| Los Angeles, Mono ¹ , Monterey, San Diego*..... | 26,562 | 183,007 |
| Totals..... | 275,979 | \$1,130,670 |

¹Medicinal salts. *Combined to conceal output of a single operator in each.

The above returns show an increase both in tonnage and value over the 1922 figures, establishing a new record for this industry in California. There were eight plants operating in Alameda County, and a total of ten plants in the other counties tabulated, being a decrease of four from the total number operated in 1922. The outlook for the current year, 1924, is that there will be an overproduction in the San Francisco Bay district at least, due to the dry season.

Production of Salt in California, by Years.

Amount and value of annual production of salt in California from 1887 is shown in the following tabulation:

| Year | Tons | Value | Year | Tons | Value |
|-----------|---------|-----------|-------------|-----------|--------------|
| 1887..... | 28,000 | \$112,000 | 1906..... | 101,650 | \$213,228 |

SILVER.

Except for the silver mines of the Randsburg district in San Bernardino County the past five years, the production of silver in Cali-

ifornia is largely as a by-product from its association with copper, lead, zinc and gold ores. As explained under gold, the State Mining Bureau does not collect the statistics of silver production independently of the U. S. Geological Survey.

The average price of domestic silver during 1923 was 82¢ per ounce at New York as compared with \$1.00 (under the Pittman Act) in 1922 and 1921, and 54.8¢ in 1914. Purchases of silver by the government, under the Pittman Act ceased after June, 1923.

The following paragraph is quoted from the U. S. Geological Survey press bulletin, by courtesy of Mr. J. M. Hill,¹ statistician in charge of the San Francisco branch office:

"The output of silver in 1923 was 3,559,442 fine ounces, which was 459,377 ounces greater than in 1922. Due to the decline in prices from \$1.00 in 1922 to an average of \$0.82 an ounce in 1923, the value of the silver output was \$181,323 less. The output of silver from dry silver ores increased about 377,000 ounces, from copper ores about 20,000 ounces, and from lead ores 66,560 ounces, but from dry gold ores about 15,000 ounces less silver were recovered than in 1922."

The distribution of the 1923 silver yield, by counties, was as follows:

Silver Production by Counties, 1923.

| County | Value | County | Value |
|------------------------------|----------|---------------------|-------------|
| Amador..... | \$15,153 | Nevada..... | \$30,534 |
| Butte..... | 1,756 | Placer..... | 297 |
| Calaveras..... | 7,316 | Plumas..... | 243,970 |
| Del Norte..... | 9 | Sacramento..... | 2,566 |
| El Dorado..... | 185 | San Bernardino..... | 2,225,959 |

*Combined to conceal output of a single producer in each.

¹U. S. Geol. Surv. Press Bulletin, July, 1924.

Silver Production of California, by Years.

The value of the silver produced in California each year since 1880 has been as follows, the data previous to 1887 being taken from the reports of the Director of the Mint. There are no data available for the years previous to 1880:

| Year | Value | Year | Value |
|-----------|---------------|------------|--------------|
| 1880..... | \$1,140,556 | 1902..... | \$616,412 |
| 1881..... | 750,000 | 1903..... | 517,444 |
| 1882..... | 845,000 | 1904..... | 873,525 |
| 1883..... | 1,460,000 | 1905..... | 678,494 |
| 1884..... | (a) 4,185,101 | 1906..... | 817,830 |
| 1885..... | 2,568,036 | 1907..... | 751,646 |
| 1886..... | 1,610,626 | 1908..... | 873,057 |
| 1887..... | 1,632,004 | 1909..... | 1,091,092 |
| 1888..... | 1,700,000 | 1910..... | 993,646 |
| 1889..... | 1,065,281 | 1911..... | 673,336 |
| 1890..... | 1,060,613 | 1912..... | 799,584 |
| 1891..... | 953,157 | 1913..... | 832,553 |
| 1892..... | 463,602 | 1914..... | 813,938 |

^b Recalculated to 'commercial' from 'coining value,' as originally published.

LIBRARY.

E. A. LOWE, Librarian.

In addition to the numerous standard works, authoritative information on many phases of the mining and mineral industry is constantly being issued in the form of reports and bulletins by various government agencies.

The library of the State Mining Bureau contains some five thousand selected volumes on mines, mining and allied subjects, and it is also a repository for reports and bulletins of the technical departments of federal and state governments and of educational institutions, both domestic and foreign.

It is not the dearth of the latter publications, but rather a lack of knowledge of just what has been published and where the reports may be consulted or obtained, that embarrasses the ordinary person seeking specific information.

To assist in making the public acquainted with this valuable source of current technical information, 'Mining in California' contains under this heading a list of all books and official reports and bulletins received, with names of publishers or issuing departments.

Files of all the leading technical journals will be found in the library, and county and state maps, topographical sheets and geological folios. Current copies of local newspapers published in the mining centers of the State are available for reference.

The library and reading room are open to the public during the usual office hours, when the librarian may be freely called upon for all necessary assistance.

PRODUCERS AND CONSUMERS.

The producer and consumer of mineral products are mutually dependent upon each other for their prosperity, and one of the most direct aids rendered by the Bureau to the mining industry in the past has been that of bringing producers and consumers into direct touch with each other.

This work has been carried on largely by correspondence, supplemented by personal consultation. Lists of buyers of all the commercial minerals produced in California have been made available to producers upon request, and likewise the owners of undeveloped deposits of various minerals, and producers of them, have been made known to those looking for raw mineral products.

When the publication of MINING IN CALIFORNIA was on a monthly basis, current inquiries from buyers and sellers were summarized and lists of mineral products or deposits 'wanted' or 'for sale' included in each issue.

It is important that inquiries of this nature reach the mining public as soon as possible and in order to avoid the delay incident to the present quarterly publication of MINING IN CALIFORNIA, these lists are now issued monthly in the form of a mimeographed sheet under the title of 'Commercial Mineral Notes.'

EMPLOYMENT SERVICE.

Following the establishment of the Mining Division branch offices in 1919, a free technical employment service was offered as a mutual aid to mine operators and technical men for the general benefit of the mineral industry.

Briefly summarized, men desiring positions are registered, the cards containing an outline of the applicant's qualifications, position wanted, salary desired, etc., and as notices of 'positions open' are received, the names and addresses of all applicants deemed qualified are sent to the prospective employer for direct negotiations.

Telephone and telegraphic communications are also given immediate attention.

The Bureau registers technical men, or those qualified for supervisory positions, and vacancies of like nature, only, as no attempt will be made to supply common mine and mill labor.

A list of current applications for positions and 'positions open' is carried in each issue. Notices are designated by a key number, and the name and address corresponding to any number will be supplied upon request, without delay or charge of any kind. If desired, recommendations may be filed with an application, but copies only should be sent to the Bureau, to avoid possible loss. Registration cards for the use of both prospective employers and employees may be obtained at any office of the Bureau upon request, and a cordial invitation is extended to the industry to make free use of the facilities afforded.

POSITIONS WANTED.

- 21-32 Chemist or petroleum work. One and one-half years' experience. Age 24; single. References. Salary open.
- 21-33 Solution man. Cyanide Mill. Sixteen years' experience. Age 44; married. References. Salary open.
- 21-34 Mining or metallurgical work. Five and one-half years' general engineering experience, including assaying and mill work. Age 27; married. References. Salary open.
- 21-35 Mill construction or superintendent. Cyanide or oil flotation. Thoroughly experienced. Age 47; married. References. Salary open.
- 21-36 Assaying or helper. Two years' apprenticeship. Age 21; single. References. Salary wanted, \$100.
- 21-37 Petrographic work.
- 21-38 Shift boss or other supervisory position. Long experience from muck stick to management. Speaks Spanish fluently and can handle American or Mexican labor. Age 41. Salary open.

PUBLICATIONS OF THE CALIFORNIA STATE MINING BUREAU.

During the past forty-four years, in carrying out the provisions of the organic act creating the California State Mining Bureau, there have been published many reports, bulletins and maps which go to make up a library of detailed information on the mineral industry of the state, a large part of which could not be duplicated from any other source.

One feature that has added to the popularity of the publications is that many of them have been distributed without cost to the public, and even the more elaborate ones have been sold at a price which barely covers the cost of printing.

Owing to the fact that funds for the advancing of the work of this department have often been limited, many of the reports and bulletins mentioned were printed in limited editions which are now entirely exhausted.

Copies of such publications are available, however, in the Bureau's offices in the Ferry Building, San Francisco; Pacific Finance Building, Los Angeles; in Santa Maria; Santa Paula; Coalinga; Taft; Bakersfield, and Sacramento. They may also be found in many public, private and technical libraries in California and other states, and foreign countries.

A catalog of all publications of the Bureau, from 1880 to 1917, giving a synopsis of their contents, is issued as Bulletin No. 77.

Publications in stock may be obtained by addressing any of the offices of the State Mining Bureau and enclosing the requisite amount in the case of publications that have a list price. The Bureau is authorized to receive only coin, stamps or money orders, and it will be appreciated if remittance is made in this manner rather than by personal check.

The prices noted include delivery charges to all parts of the United States. Money orders should be made payable to the State Mining Bureau.

DETERMINATION OF MINERAL SAMPLES.

Samples (limited to three at one time) of any mineral found in the state may be sent to the Bureau for identification, and the same will be classified free of charge. No samples will be determined if received from points outside the state. It must be understood that no assays, or quantitative determinations will be made. Samples should be in lump form if possible, and marked plainly with name of sender on outside of package, etc. No samples will be received unless delivery charges are prepaid. A letter should accompany sample, giving locality where mineral was found and the nature of the information desired.

THE STATE MINING BUREAU
CORDIALLY INVITES YOU TO VISIT
ITS VARIOUS DEPARTMENTS MAINTAINED
FOR THE PURPOSE OF FURTHERING
THE DEVELOPMENT OF THE
MINERAL RESOURCES OF CALI-
FORNIA

At the service of the public are the scientific reference library and reading room, the general information bureau, the laboratory for the free determination of mineral samples found in the state, and the largest museum of mineral specimens on the Pacific Coast. The time and attention of the State Mineralogist, as well as that of his technical staff, is also at your disposal.

Office hours: 9 a.m. to 5 p.m. daily.

Saturday, 9 a.m. to 12 m.

LLOYD L. ROOT,

State Mineralogist.

Third floor, Ferry Building, San Francisco, Cal.

Branch Offices: Pacific Finance Building, Los

Angeles; Sacramento, Bakersfield, Taft, Coal-

inga, Santa Maria, and Santa Paula.

ALBERT CARTER, *Special Agent*-----Pacific Finance Building, Los Angeles

LETTER OF TRANSMITTAL.

Sacramento, California, January 2, 1924.

HON. FRIEND W. RICHARDSON,
Governor of the State of California,
Sacramento, California.

YOUR EXCELLENCY: Conforming with the provisions of section 2 of the Medical Practice Act of the State of California, Charles B. Pinkham, M. D., Secretary-Treasurer of the Board of Medical Examiners, has the honor of respectfully presenting for your consideration the annual report showing the activities of this branch of the state government.

The personnel of the Board has been enhanced by the appointment of Junius B. Harris, M. D., to succeed Cyrus J. Gaddis, D. O., term expired.

Attorney Adolphus Bianchi of San Francisco was appointed chief counsel on October 15, 1923, vice Harry A. Encell, resigned, effective July 1, 1923.

Former Associate Counsel Leo Rosecrans of Los Angeles also severed his connection with the Board by resignation effective June 20, 1923.

REPORT OF BOARD OF MEDICAL EXAMINERS, FOR THE YEAR 1923.

MEETINGS.

During the year just closed, the Board of Medical Examiners held three regular meetings and two special meetings. Oral examination of reciprocity applicants were held at each meeting, while four written examinations were held, *i.e.*, February and June in Los Angeles, July in San Francisco and October in Sacramento.

Between written examinations, oral examinations, legal hearings and routine business, the Board members have a most busy four days' session at each regular meeting.

APPLICATIONS.

California medical teaching institutions continue to graduate a goodly number of well educated doctors of medicine. These applicants for a written examination for a Physician's and Surgeon's certificate, are augmented by a large number of practitioners of medicine from other states that seek the allurements of residence in our glorious state.

The number of applications filed in 1923 compares favorably with those filed in 1922 despite the creation of the Osteopathic and Chiropractic Boards, having jurisdiction over the graduates of colleges granting osteopathic or chiropractic degrees.

| <i>Class of Applicant</i> | | <i>Filed 1921</i> | <i>Filed 1922</i> | <i>Filed 1923</i> |
|---------------------------|--|-------------------|-------------------|-------------------|
| A. | Physician and surgeon, written..... | 187 | 199 | 206 |
| D. | Physician and surgeon, government credentials..... | 14 | 37 | 26 |
| AB. | Physician and surgeon, oral, section 12½..... | 9 | 6 | 0 |
| BB. | Drugless practitioner, written..... | 16 | 83 | 0 |
| | Osteopathic..... | 22 | 0 | 0 |
| | Chiropractic..... | 61 | 83 | 19 |
| C. | Reciprocity, physician and surgeon..... | 447 | 442 | 632 |
| CB. | Osteopathic, reciprocity..... | 17 | 20 | 0 |
| CBB. | Drugless, reciprocity..... | 10 | 14 | 0 |
| CE. | Chiropodist, reciprocity..... | 0 | 1 | 3 |
| E. | Chiropodist, written..... | 20 | 1 | 13 |
| F. | Midwife, written..... | 7 | 28 | 11 |
| | | 727 | 831 | 910 |

The above table discloses: 1. That the Medical Practice Act requires the Board to conduct written examinations for physicians and surgeons, for drugless practitioners, for chiropodists and for midwives.

2. That provision is made for licensing those presenting satisfactory credentials showing commission in the U. S. A., U. S. N. or U. S. P. H. Service.

3. That applications for certificates to practice in California may be filed on credentials from other states (reciprocity) by physicians and surgeons, drugless practitioners, chiropodists and midwives.

The Osteopathic Act passed at the November, 1922, election takes from the Board of Medical Examiners all jurisdiction over graduates of osteopathic schools. After midnight of December 21, 1922, all jurisdiction passed to the Board of Osteopathic Examiners, hence the Board of Medical Examiners can not receive applications from graduates of osteopathic schools. The chiropractic initiative in effect the same date requires graduates from chiropractic schools or colleges to file application with the Board of Chiropractic Examiners created thereunder and not with the Board of Medical Examiners.

CERTIFICATES ISSUED.

The total number of certificates issued during 1923 compares favorably with those issued in 1921 and 1922 as disclosed by the following table:

CERTIFICATES ISSUED IN 1921, 1922 AND 1923.

| <i>Class of Applicant</i> | | | | |
|---------------------------|---|------|------|------|
| A. | Physician and Surgeon: | 1921 | 1922 | 1923 |
| | (a) Written examination..... | 174 | 197 | 183 |
| | (b) Government credentials..... | 11 | 26 | 18 |
| AB. | Physician and surgeon, section 12½..... | 13 | 0 | 0 |
| C. | Reciprocity—Physician and Surgeon: | | | |
| | (a) Direct..... | 294 | 322 | 404 |
| | (b) Oral..... | 95 | 85 | 86 |
| BB. | Drugless, written..... | 23 | 43 | 3 |
| CB. | Reciprocity, osteopathic..... | 13 | 24 | 0 |
| CBB. | Reciprocity, drugless..... | 11 | 12 | 0 |
| E. | Chiroprody, written..... | 19 | 1 | 13 |
| CE. | Reciprocity, chiroprody..... | 0 | 1 | 2 |
| F. | Midwife..... | 3 | 14 | 4 |
| Total..... | | 656 | 747 | 713 |

EXAMINATION STATISTICS FOR 1923.

| <i>Physicians and Surgeons—California schools.</i> | | <i>Percentages</i> | | | |
|--|---------------|--------------------|---------------|---------------|--|
| | <i>Passed</i> | <i>Failed</i> | <i>Passed</i> | <i>Failed</i> | |
| University of California Medical School..... | 38 | 0 | 100.0 | 0 | |
| Stanford University Medical School..... | 20 | 0 | 100.0 | 0 | |
| *College of Physicians and Surgeons, Medical Department, University of Southern California.. | 0 | 4 | 0 | 100.0 | |
| College of Medical Evangelists..... | 35 | 0 | 100.0 | 0 | |
| Cooper Medical College..... | 1 | 0 | 100.0 | 0 | |
| Extra state schools..... | 88 | 23 | 79.2 | 20.7 | |
| Totals..... | 182 | 27 | 87.0 | 12.9 | |

*Closed 1920. Undergraduate unfinished education completed in another school but diploma of parent school issued.

| <i>Drugless—California schools</i> | | <i>Percentages</i> | | | |
|---|---------------|--------------------|---------------|---------------|--|
| | <i>Passed</i> | <i>Failed</i> | <i>Passed</i> | <i>Failed</i> | |
| California College of Chiropractic..... | 0 | 3 | 0 | 100.0 | |
| Eclectic College of Chiropractic..... | 0 | 1 | 0 | 100.0 | |
| Kinetic Drugless College..... | 0 | 3 | 0 | 100.0 | |
| Los Angeles College of Chiropractic..... | 0 | 1 | 0 | 100.0 | |
| Western College of Chiropractic..... | 13 | 14 | 48.0 | 51.0 | |
| Extra state schools..... | 0 | 1 | 0 | 100.0 | |
| Totals..... | 13 | 23 | 36.1 | 63.0 | |
| <i>Chiroprody.</i> | | | | | |
| California College of Chiroprody, San Francisco.. | 10 | 0 | 100.0 | 0 | |
| Extra state schools..... | 3 | 0 | 100.0 | 0 | |
| Totals..... | 13 | 0 | 100.0 | 0 | |
| <i>Midwives</i> | | | | | |
| Extra state schools..... | 3 | 10 | 23.0 | 76.0 | |

Reciprocity.

The operation of chiropractic and osteopathic initiatives has in no way lessened the income of the Board by decreasing the annual number of reciprocity applications filed or certificates issued, as may be seen by the following table:

COMPARISON OF APPLICATIONS FILED FOR RECIPROCITY CERTIFICATES
WITH THE NUMBER OF CERTIFICATES ISSUED.

| | Applications filed | | | Certificates issued | | |
|-------------------------------------|--------------------|------|------|---------------------|------|------|
| | 1921 | 1922 | 1923 | 1921 | 1922 | 1923 |
| Physician and surgeon (C)..... | 447 | 442 | 602 | 389 | 407 | 490 |
| Osteopathic (CB)..... | 17 | 20 | 0 | 13 | 24 | 0 |
| Drugless (CBB)..... | 10 | 14 | 0 | 11 | 12 | 0 |
| Chiroprody (CE)..... | 0 | 1 | 3 | 0 | 1 | 2 |
| Total reciprocity certificates..... | 474 | 477 | 605 | 413 | 454 | 492 |

The following tabulation by states showing the reciprocity certificates issued by the California Board to individuals licensed by other state examining boards manifests that the majority have been issued to applicants from those states that show the largest registration of practitioners of the healing art:

| | | | |
|---------------------------|----|---------------------|-----|
| Alabama..... | 6 | Hawaii..... | 3 |
| Alaska..... | 0 | Idaho..... | 12 |
| Arizona..... | 7 | Illinois..... | 77 |
| Arkansas..... | 1 | Indiana..... | 20 |
| Colorado..... | 10 | Iowa..... | 27 |
| Connecticut..... | 2 | Kansas..... | 19 |
| Delaware..... | 0 | Kentucky..... | 6 |
| District of Columbia..... | 1 | Louisiana..... | 8 |
| Florida..... | 1 | Maine..... | 1 |
| Georgia..... | 4 | Maryland..... | 8 |
| Massachusetts..... | 8 | Pennsylvania..... | 28 |
| Michigan..... | 6 | Rhode Island..... | 2 |
| Minnesota..... | 14 | South Carolina..... | 1 |
| Mississippi..... | 2 | South Dakota..... | 8 |
| Missouri..... | 17 | Tennessee..... | 6 |
| Montana..... | 19 | Texas..... | 14 |
| Nebraska..... | 30 | Utah..... | 7 |
| Nevada..... | 3 | Vermont..... | 2 |
| New Hampshire..... | 3 | Virginia..... | 1 |
| New Jersey..... | 1 | Washington..... | 22 |
| New Mexico..... | 1 | West Virginia..... | 3 |
| New York..... | 27 | Wisconsin..... | 10 |
| North Dakota..... | 10 | Wyoming..... | 1 |
| Ohio..... | 15 | Total..... | 492 |
| Oklahoma..... | 6 | | |
| Oregon..... | 12 | | |

But few licentiates of the Board of Medical Examiners of California have sought registration in other states during 1923 as will be seen by the following group of California practitioners listed with the name of the state where registration was sought and the date indorsed.

Arizona—
Cox, Edward R., M. D., June 14, 1923.

District of Columbia—
Scoles, Hudspeth E., M. D., August 9, 1923.

Georgia—
Schneider, Julius F., October 10, 1923.

Iowa—
Yates, Walter S., January 4, 1923.

Kansas—
Matthews, Adelbert C., January 18, 1923.

Kentucky—
Balkins, Almon J., October 31, 1923.

Maryland—
Scoles, Hudspeth E., August 9, 1923.
Truman, A. W., April 25, 1923.

Michigan—
Ahlem, Judith, September 16, 1923.
Potts, Enos A., April 25, 1923.

Minnesota—
Crane, Wm. Whitfield, July 19, 1923.
Delamere, Granville, April 5, 1923.
Matthews, Adelbert C., January 18, 1923.
Mentzer, Stanley H., September 20, 1923.

Nevada—

 Palmer, May McKinney, September 20, 1923.
 Thomas, William L., June 7, 1923.

West Virginia—

Bailey, John H., October 31, 1923.

Wisconsin—

Buerki, Robert C., October 7, 1923.

HEARINGS.

At each regular meeting, the Board has conducted hearings of complaints filed against those licensed under the Medical Practice Act of this state who have been charged of violation of the provisions of section 14 thereof. These complaints are classified as follows:

| | |
|-------------------------------|----|
| 1. Narcotic violations..... | 10 |
| 2. Abortions..... | 5 |
| 3. Habitual intemperance..... | 1 |
| 4. Miscellaneous..... | 6 |
| Total..... | 22 |

Decisions of the Board following the hearings of these complaints show as follows:

| | |
|-----------------------------|----|
| Guilty (revoked)..... | 3 |
| Guilty (probation)..... | 7 |
| Guilty (not penalized)..... | 3 |
| Cases continued..... | 7 |
| Dismissed..... | 2 |
| Total..... | 22 |

| Name | February meeting | July meeting | October meeting |
|--------------------------------------|-------------------------|---|---------------------------------|
| Adams, Charles B., M. D. (1)..... | Guilty—probation 1 year | | |
| Bell, David R., M. D. (1)..... | Guilty—penalty deferred | | |
| Caesar, Wm. J., M. D. (4)..... | Continued to July | Continued to October..... | Dismissed. |
| Charles, Harvey, M. D. (1)..... | | Guilty—5 years probation | |
| Deacon, George, M. D. (1)..... | Guilty—penalty deferred | | |
| Dietrich, Curt O., M. D. (2)..... | Continued to July | Continued to Feb., 1924. | |
| Dutcher, Willis, M. D. (1)..... | | | Continued to Feb., 1924. |
| Elliott, Charles R., M. D. (3)..... | | Continued to October..... | Revoked. |
| Grisso, Davis, M. D. (4)..... | Continued to July | Continued to October..... | Revoked—writ of review pending. |
| Hadley, Fred H., M. D. (4)..... | | Guilty—probation; Superior Court reversed Board | |
| Haigh, Frederick, M. D. (2)..... | | | Continued to Feb., 1924. |
| Haruki, Rinhei, M. D. (4)..... | | | Guilty—probation 1 year. |
| Holsman, Charles K., M. D. (4)..... | Continued to July | Continued to October..... | Continued to Feb., 1924. |
| Hummel, Heinz Geo., M. D. (2)..... | | | Continued to Feb., 1924 |
| Jolley, John E., D. C. (4)..... | Revoked | | |
| Kvello, Olaf A., M. D. (1)..... | Continued to July | Guilty—probation 5 years | |
| McDannell, Wm. R., M. D. (1)..... | Probation 5 years | | |
| Meredith, Charles H., M. D. (1)..... | | Continued to Feb., 1924. | Continued to Feb., 1924. |
| Mueller, Otto H., M. D. (1)..... | | Guilty—5 years probation | |
| Mutchmor, John T., M. D. (2)..... | | | Dismissed. |
| Stone, Augusta, M. D. (2)..... | | | Continued to Feb., 1924. |
| Wright, T. B., M. D. (1)..... | Guilty—penalty deferred | | |

Petitions for restoration of certificates heretofore revoked have been filed and action taken as follows:

Card, Wm. S., M. D., revoked February 18, 1919, denied.
 Marsh, Charles E., Naturopath, revoked February 15, 1922, denied.
 Sanders, Alfred T. A., M. D., revoked March 20, 1919, restored July 11, 1923.

DIPLOMA MILLS AND FRAUDULENT STATE LICENSES.

Nation wide interest has recently been aroused through disclosures of the credential and "diploma mills" in Missouri, grossly exaggerated statements having been made that there are approximately 15,000 physicians practicing in the United States on fraudulent credentials. The Council of Education of the American Medical Association, which keeps a card index of all students as well as graduates of medical colleges in this country, positively states there cannot possibly be anywhere near such a number of fraudulent medical diplomas in use in the entire United States. (Journal American Medical Association, December 22, 1923, page 2120.)

The medical schools mentioned in the St. Louis *Star's* diploma expose are all located in the State of Missouri and are four in number, namely:

1. *The National University of Arts and Sciences, Medical Department*, which is reported as having come into existence in 1912 through the absorption of the "American Medical College." In 1915 the "St. Louis College of Medicine and Surgery," also joined the Medical Department of the National University of Arts and Sciences. The Medical Department of the National University of Arts and Sciences ceased existence in 1918.

2. The St. Louis College of Physicians and Surgeons organized 1869, suspended 1873. Reorganized 1879 and in 1915 merged with the Medical Department of the National University of Arts and Sciences. The institution was re-established in 1916 and has since continued. Dean Waldo Briggs, M. D. Graduates reported as not recognized by the licensing Board of its home state Missouri, and the forty-six other states.

3. The Kansas City College of Medicine and Surgery was organized in 1915 as an off shoot of the Eclectic Medical University, and although claiming to be an eclectic institution, is reported not recognized by the National Eclectic Association as well as the licensing board of its home state Missouri, and the licensing Boards of forty-two other states, including California. Dean D. R. Alexander, M. D., is reported as one of the principals in diploma ring scandal.

In October, 1923, it was reported throughout the United States that a "clique" consisting of Robert Adcox, M. D., D. R. Alexander, M. D., Ralph A. Voigt, M. D. and Professor W. P. Sachs for some time has been reporting as operating in Missouri as a "clearing house" for the sale of fraudulent high school credentials, university degree and medical diplomas.

For several years modern educational standards have demanded that prospective medical students must have documentary evidence of a high school or higher education in order to enter medical college. It is reported that credentials of this nature have been purchasable from Professor W. P. Sachs, former dean of the National University of Arts and Sciences, and for many years state examiner for public schools in Missouri, whose alleged confession was printed in the St. Louis *Star* of October 19, 1923, wherein he relates that during the past ten years he

had dealt in fraudulent high school certificates, college credits, degree Bachelor of Science and medical diplomas; that, while serving as state examiner of Missouri he had printed some 2500 high school certificates "for future use," disposing of about 1000 to 1500 at \$5.00 each.

The St. Louis *Star* of October 23, 1923, prints a similar confession made by B. H. Jolley, Superintendent of Public Schools, St. Charles County, Missouri, who relates, as a part of the diploma ring operation in Missouri, the fraudulent issue of high school credentials at \$10.00, estimating that he had sold about 57 of these official documents to Dr. Adeox during the past year.

It is believed that Professor Sachs and B. H. Jolley are not the only individuals who have issued fraudulent preliminary education certificates so essential for matriculation in medical colleges and it is quite possible that some medical colleges of good repute have been imposed upon in accepting similar fraudulent preliminary education certificates. The so-called "diploma mill" operators offer the greatest market for purchase and sale of these preliminary education certificates as a part of their scheme to turn out "half baked" doctors of medicine with little, if any, professional training.

A State Board of Medical Examiners that is painstaking in its examination of an applicant's credentials, soon learns that there are different classes of undesirable diplomas, namely:

1. Diplomas from reputable schools that through theft or otherwise, have come into possession of unscrupulous individuals who change their name to conform with that engrossed on the diploma. Such a case was uncovered by the Colorado Board in Charles Fox (Ill. State Reformatory No. 2865), alias A. Edward Rytzel, who posed as Dr. Geo. A. Elliott, having stolen the credentials of the original Geo. A. Elliott, M. D., University of Toronto, 1896. Fox later erased the name "Elliott" from the diploma, wrote in Geo. E. Cooke, assumed that name and was so licensed in Illinois. Some two years ago it was related that an individual known in California for several years as Galen R. Hickok (now serving time in San Quentin Prison), was suspected as having some years ago surreptitiously come into possession of medical diploma of the genuine Galen R. Hickok granted by the St. Louis College of Physicians and Surgeons and dated April 26, 1899. It is said that the individual long known as Hickok had assumed the name Galen R. Hickok engrossed on said diploma; that on the basis of this diploma he obtained a Nevada license to practice medicine and surgery and was later licensed as a Naturopath in this state by Special Act of California Legislature in 1909. In a letter commenting on the commitment of the California Galen R. Hickok to San Quentin Prison, the original Galen R. Hickok, M. D., Santante, Kansas, stated, "By the way, I recently received my old diploma—it was sent me by the man who stole it. I presume we are rid of him now, for a while at least."

2. In the second group are listed diplomas from reputable schools that have been stolen or otherwise come into possession of unscrupulous individuals who erase the original name and insert another. This fraud is disclosed not only by careful scrutiny of each diploma filed but as well by either requiring on the application blank the indorsement of the medical college as to the authenticity of said diploma or by requiring a

certified copy of the applicant's registration record from another state wherein will appear the name of the individual applicant, name of Medical School that granted him his medical degree and date of same.

3. In the third group we place the diplomas of reputable medical schools that have some way fallen into the hands of the unscrupulous "diploma brokers"¹ who sell to the highest bidder. The Bulletin of the Federation of Medical Examining Boards, April and May, 1916, relates how diplomas of Marquette University Medical School² have fallen into the hands of diploma merchants then said to be conducting a "medical course" in Chicago. It is related that Marquette Medical College is not the only reputable institution whose diplomas, signed in blank, have been fraudulently disposed of by unscrupulous individuals.

4. In the fourth group are placed those diplomas from a reputable medical college earned by one who for hire, enters a medical college under the name of his employer, earns the diploma which is issued in the name of his employer and later delivered to him. Such was the case of Sidney H. Knowles, who matriculated and graduated some years ago from the University of New York under the name of A. H. Warren. Knowles thereafter delivered the diploma to Warren who paid all costs. It is evident that Warren who had not attended medical college, could not pass a State Board examination unless the Board operated by fraud as is reported does the Eclectic Board of Medical Examiners of Connecticut, where, according to reports, the examination questions are obtained and answers distributed to applicants prior to entering the examining room. Governor Templeton of Connecticut is reported in the Literary Digest of December 22, 1923, to have read the examination papers of some twenty successful applicants and found "that all twenty read precisely alike down to the last word. The impostors were not even smart enough to change the phrasing." One of the products of this unscrupulous procedure is reported as Geo. Sutcliffe, made a doctor by the diploma mill and for \$100 purchased his license to practice in Connecticut. He is now reported as charged with manslaughter following the death of Albert C. Hoddy, war veteran, on the operating table in Sutcliffe's office overdosed with ether during the removal of a finger. The authorities of Connecticut are quoted as revoking about thirty licenses to practice obtained in that state by fraud and about 150 additional physicians of said state, whose records may be questionable, are to be called before the Grand Jury.

5. In the fifth group are placed the diplomas from extinct colleges issued and dated after the college has closed. The Harvey Medical College³ of Chicago, according to reports, closed in 1903, yet Victor Richard Ratten presented a Harvey Medical College diploma dated March 8, 1907 at which time, according to reports, Harvey Medical College was not giving any medical instruction. Diplomas of the Southern College of Medicine and Surgery were reported sold in 1917 although the college was closed in 1914. (Fed. Bulletin, Sept., 1915, page 69; Nov., 1917, page 223; Jan., 1918, page 9, 12, 18; Nov., 1918, page 8). These spurious diplomas were reported as recognized by the Eclectic Examining Boards of Florida and Georgia and what of these Boards? In the former state the Eclectic Board was reported ousted by the Governor of Florida for alleged sale of diplomas from extinct colleges at from \$300 to \$500

¹ Federation Bulletin, 1916, page 52.

² Federation Bulletin, April, 1916, pages 3 to 26.

³ Journal American Medical Association, August 2, 1919, page 356.

each. (Fed. Bulletin, 1917, page 126). A statement was published in 1917 of the gigantic issuance of fraudulent certificates to practice medicine and surgery in Florida, Georgia and Tennessee.

6. In the sixth group are classed diplomas of extinct colleges disposed of long after the college closed its doors yet each diploma is dated prior to said closing date. In our own state the Pacific Medical College was incorporated in 1913 with limited quarters at 338½ South Hill street, Los Angeles, reported organized for the purpose of granting Doctor of Medicine diplomas to Osteopathic school students or graduates. Many diplomas were reported as issued to graduates of Osteopathic schools who had not spent a day in the Pacific Medical School.

The diploma of the Pacific Medical College has never been recognized by the Board of Medical Examiners in California and the institution on the eve of threatened prosecution for fraudulent issuance of diplomas reported disincorporation proceedings in January, 1918¹ but evidently a surplus lot of diplomas *remained on hand* for frequent reports from various states relate possession of these diplomas by those who, 'tis stated, have never been in the City of Los Angeles. The recent diploma mill expose in Missouri connects the Pacific Medical School with the sale of diplomas to aspirants for graduation from the Kansas City College of Medicine and Surgery. Reporter Harry Thompson Brundage of the *St. Louis Star*, who under the name of Harry Thompson, purchased diplomas through Ralph A. Voigt, M. D., reported Chief of the diploma mill ring, Kansas City, Missouri, relates that he received a letter from Voigt which contained this cryptic statement: "I have gone to the West Coast for completed stock" (diploma) "so you can have less trouble I will send you a wire as soon as it arrives" Thompson also refers to a telegram sent to Dr. Adcox signed "Ralph" containing the statement: "Alex. (Alexander, Dean of Kansas City Coll. of Med. and Surg.) agrees to issue final paper (diploma²) on Pacific Can arrange through personal friends sit in Arkansas and complete Thompson." According to Thompson's statement, Dr. Adcox explained this telegram as meaning that Dr. Alexander has agreed to give you (Thompson) a diploma based on credits obtained for you (Reporter Thompson) by Ralph (Voigt) from the college on the Pacific Coast (Pacific Medical College, Los Angeles²)" Thompson relates he called on Voigt who stated: "I am looking for your diploma in every mail, haven't seen it yet. That bird in California certainly works slow but he's certain and the stuff he puts out is A1. Dr. Alexander has promised to issue another diploma to back up the California (Pacific Medical College²) degree."

The Kansas City, Mo. Journal of October 20, 1923, published an interview with Charles A. Johnson, a student and helper at the Kansas City College of Medicine and Surgery who relates, "In the room I used as an employee of the college, I (Charles Johnson) heard the sale of two diplomas discussed by Dr. Alexander and pupils in the School (Kansas City College of Medicine and Surgery). These diplomas were to be purchased for \$300 each and were to be on the Pacific Medical College of Los Angeles, Cal., which went out of business in 1916, I understood."

¹ Decree of Dissolution is dated June 7, 1918.

² The parenthetical portions are interpolated explanation.

Thus the "paper" goes out "from the college on the Pacific Coast" which reported to the Examining Board of this State that they had disincorporated in January, 1918. How appalling that the corporate laws of California are so lax that any group of individuals for a paltry sum, can incorporate medical schools and sell diplomas without fear of punishment. For several years we have diligently struggled in legislative halls to correct this evil but without success.

The Federation Bulletin of June, 1923, page 132, published a partial list of spurious diplomas of various schools.

To a less extent have questionable diplomas granting the degree of "Doctor of Osteopathy" been issued by unrecognized Osteopathic schools, such as the International College of Osteopathy¹ operates by Chas. E. Murray, reported as conducting a correspondence course at Elgin, Illinois.

It is reported that the diploma of the Illinois College of Osteopathy is not recognized by the American Osteopathic profession.

The Journal of the American Medical Association, October 27, 1923, page 1463, relates that Harry Thompson Brundage, a reporter on the *St. Louis Star*, purchased, under the name of Harry Thompson, an Osteopathic diploma issued by the "American College, Department of Osteopathy" dated February 24, 1923. This institution was reported as incorporated in Illinois in 1916 as the "Metropolitan College" changing to the American College in 1919 and said to be a correspondence diploma mill.

Atlanta School of Osteopathy issued an Osteopathic diploma to Otis Chas. Warburton dated Camden, N. J., June 22, 1904, "endorsed by the Atlantic College of Osteopathy, Wilkesbarre, Pa.," whereas Warburton, in writing the California Board on April 8, 1922, stated he graduated from "The Atlantic School, Buffalo, N. Y." Strange Warburton would study in Buffalo (where no such school existed), obtain his diploma in New Jersey and have it indorsed in Pennsylvania by a school of the same name.

A vast number of chiropractic diplomas have been acquired with ease. Practically all the well known chiropractic schools, in their early existence, have offered "mail order" courses and issued a diploma thereafter. Although this procedure has been stopped by the three leading chiropractic schools in the United States, it is reported as still continued by others. The "American University"² of Chicago has long been reported as an institution "making doctors while you wait" (*Fed. Bulletin*, Sept., 1915, page 71), and the Oriental University,³ Washington, D. C., was recently subject to a fraud order issued against it by the post office authorities.

But why should one waste time on a correspondence course when chiropractic diplomas may be easily obtained as related by Reporter Harry Thompson of the *St. Louis Star* who also reported that under the name of Thompson he had purchased a diploma from the Progressive College of Chiropractic, Chicago, Illinois, dated March 1, 1923.

Many and diverse are the Chiropractic diplomas obtained after a perfunctory course of study by mail order course or by purchase.

¹ Federation Bulletin, December 18, page 265.

² Federation Bulletin, April, 1917, page 15.

³ Federation Bulletin, October, 1916, page 60; May, 1917, page 37; January, 1918, page 13; August, 1920, page 215; July, 1921, page 153; August, 1922, page 184; December, 1922, page 293.

The Davenport School of Chiropractic, Davenport, Iowa, was reported, about 1916, to have sold a number of diplomas granting the degree Doctor of Chiropractic (Fed. Bulletin, March, 1917, page 292).

The diploma from Naturopathic sources has been reported for sale and so the story goes, interwoven with every branch of the healing art.

Boards of Medical Examiners may come and Boards will go but traffic in fake diplomas probably as old as the history of the healing art, will continue to invade the realm of medicine and surgery, osteopathy, chiropractic, et al., as long as cupidity appeals to man, and so long as lax state laws permit the incorporation of "sun down" institutions clothed with statutory authority to grant professional degrees without exaction of capable teaching force, satisfactory equipment and honest management. What care the incorporators of such institutions for honor, what care they for human sacrifice so long as they line their pockets with ill gotten gains through sale of degrees? The average state laws offer no safeguard against the incorporation of fake schools and sad to relate, California is one where any group of individuals with about \$25.00 to spend, can incorporate any kind of school and issue any kind of degree without molestation.

Little do the public appreciate the value of a strong Medical Practice Act administered by an unprejudiced yet fearless Board of Examiners for 'tis such a barrier that stems the tide of the product of these "diploma mills," best accomplished if there be a provision in the Medical Act granting the Board power to "approve" schools and investing the Board with the authority to accept applications from graduates of soundly reliable colleges while rejecting the product of the "mushroom" institutions. Power of disapproval affords an incentive for the proper conduct of a school. When questionable procedures are indulged in, a state Board is then empowered to refuse to recognize graduates of such schools.

That some degree of success may be attained in a general policy of the product of the "diploma mills," each State Board must keep in close touch with the policies of the professional schools as well as the procedures adopted by the various licensing boards throughout the United States. The longer the service of members on a Board of Medical Examiners, the better protected is the population of such state from the "fakir" with fraudulent credentials or the undesirable with an unsavory record from another state. A state is indeed unfortunate that finds its Examining Board frequently upset and its membership changed by political exigencies. This is emphatically true when the executive officer is changed, particularly in those states where such a change necessitates the transfer of the Board's records from one city to another with the invariable resultant loss of most important documents.

The question as to what is to be done to correct the evil of the fraudulent diploma and the fraudulent certificate, has afforded the newspapers opportunity to offer suggestions, some of which we quote.

The Boston *Transcript*, rather than presenting a means of curbing the evil, offers the suggestion that, "The quack to be sure we shall no doubt always have with us. . . . No state can endow its citizens with common sense, but the state can at least prevent such wholesale exploitation of the credulity of the ignorant as now prevails."

The Pottstown (Pa.) *News* says: "In rounding up the quack doctors who are practicing under the diplomas of fake medical schools, the state authorities are doing the public an important service, when the

state permits an illegal or fake practitioner to practice right under their nose, there's something wrong. . . . " This seems applicable to Missouri, home of the "diploma mills" and the reported haven of the illegal practitioner where so far as we have heard, no organized movement has been made to stop the manufacture of "fake doctors" or the practice of the unlicensed.

U. S. Senator Royal Copeland, M. D., former Dean of the New York Homeopathic College, later Health Commissioner of New York, has caused a resolution to be introduced in congress calling for a federal investigation into the fake diploma and fraudulent license situation, specifically directing investigation as to whether the United States mails have been fraudulently used by self-styled medical institutions for the purpose of fraud in connection with the sale of degrees or diplomas in preparation for medical practice. He urges that the states adopt an annual registration as a check on illegal practice. Since 1917, California has had such a requirement in our Medical Practice Act which has proven of inestimable value.

The New York *Times* suggest the remedy for correcting the diploma evil, fraudulent license menace and illegal practice situation lies in the advisability of setting up a single examining board, commenting that the difficulties now faced by Connecticut are due to a multiplicity of boards "with a resultant lack of responsibility."

California practitioners of the healing art have been under the administrative jurisdiction of a single Board of Medical Examiners for many years until the general election of November 7, 1922, created two additional boards so that we now have the healing art in California under the jurisdiction of (1) Board of Medical Examiners, (2) the Board of Osteopathic Examiners, (3) the Board of Chiropractic Examiners.

We hope that this experiment in distributing administrative and enforcement obligations between three boards in California will not result in "lack of responsibility" but will operate to the satisfaction of our electorate.

LEGAL REPORT OF THE NORTHERN DISTRICT.
VIOLATIONS OF SECTION 17 OF THE MEDICAL PRACTICE ACT.

San Francisco, California, January 2, 1924.

DR. C. B. PINKHAM, *Secretary-Treasurer,*
Board of Medical Examiners,
Sacramento, California.

DEAR DOCTOR: Enclosed herewith is the annual report of the Legal Department of the North for the year ending December 31, 1923.

| Name of case | Location | Date initiated | Disposition |
|-----------------------|--------------------|--------------------|--|
| Bong, Lee Tai | Stockton | March 14, 1923 | Dismissed, May 1, 1923. |
| Bong, Lee Tai | Stockton | July 21, 1922 | Dismissed, March 31, 1923. |
| Brown, H. H. | Rio Vista | October 12, 1922 | Pending trial. |
| Brown, W. R. | Haywards | May 16, 1922 | Pending hearing. |
| Bleschmidt, E. C. | Williams | July 26, 1921 | Reserve calendar (Chiropractor). |
| Cho, Lau Yit | San Francisco | May 16, 1922 | Dismissed, June 7, 1923. New complaint filed. Hearing had pending disposition. |
| Cho, Lau Yit | San Francisco | November 5, 1923 | Dismissed, December 27, 1923. New complaint filed. Hearing had pending disposition. |
| David, T. H. | Sacramento | April 25, 1922 | Pending hearing. |
| David, T. H. | Sacramento | July 18, 1922 | Pending hearing. |
| Foster, H. A. | Oakland | December 28, 1922 | Reserve calendar (Chiropractor). |
| Foster, June | Oroville | October 30, 1920 | Reserve calendar (Chiropractor). |
| Foster, Marie H. | Stockton | July 12, 1923 | Reserve calendar (Chiropractor) |
| Fowler, R. Thompson | Oakland | September 31, 1922 | Pending trial |
| Fowler, Wiley | San Francisco | October 18, 1923 | Guilty, December 10, 1923. 60 days. |
| Francis, A. F. | Oroville | December 30, 1920 | Reserve calendar. |
| Hash, Blanche | Oroville | December 30, 1920 | Reserve calendar (Chiropractor). |
| Him, Wong | Oakland | February 1, 1923 | Pending trial. |
| *Hing, Chew | Stockton | March 14, 1923 | Guilty, May 1, 1923. Fine \$100. |
| Hing, Chew | Stockton | July 21, 1922 | Dismissed March 31, 1923, following affirmance of judgment by Appellate Court re jurisdiction. |
| Hing, Chew | Stockton | May 16, 1922 | Dismissed March 31, 1922, following affirmance of judgment by Appellate Court re jurisdiction. |
| Hing, T. Wah | Sacramento | November 24, 1922 | Information dismissed. |
| Hollenback, H. E. | Woodland | July 21, 1922 | Reserve calendar (Chiropractor). |
| Hoque, M. | San Jose | March 9, 1921 | Reserve calendar. |
| Johnson, G. D. | Stockton | November 1, 1923 | Guilty, December 3, 1923. Fine \$150; paid December 11, 1923. |
| *Kam, Wong | Fresno | December 14, 1922 | Guilty, January 10, 1923. Fine \$150. |
| Keel, Fannie | Antioch | February 16, 1922 | Reserve calendar (Chiropractor). |
| Kim, Wong | Fresno | May 24, 1922 | Pending trial. |
| King, F. J. | Yuba City | December 20, 1922 | Pending trial. |
| Lau, Harry Sun | Oakland | February 1, 1923 | Pending trial. |
| Lancelle, Rose | Stockton | December 20, 1923 | Pending hearing. |
| Leather, S. S. | Lodi | May 6, 1922 | Reserve calendar |
| LeRoy, F. J. M. | Yuba City (No.100) | | Convicted on fraudulent check charge. |
| Low, Harry S. | Oakland | February 1, 1923 | Pending trial. |
| McCurdy, Lucy Shirley | Sacramento | November 8, 1923 | Pending hearing. |
| Mar, M. T. | Stockton | March 14, 1923 | Dismissed, May 1, 1923. |
| Miller, Orlando E. | San Francisco | March 1, 1923 | Dismissed, March 16, 1923. |
| Minaker, May R. | San Francisco | May 17, 1923 | Guilty, September 5, 1923; probation 6 months. |
| Nam, Wong | Fresno | December 14, 1922 | Pending hearing. |
| On, Poo | Modesto | May 11, 1923 | Pending trial. |
| On, Poo | Modesto (No.1460) | September 19, 1922 | Guilty, February 8, 1923. Fine \$500, paid February 13, 1923. |
| Reorda, Catrina | San Jose | May 26, 1923 | Dismissed, August 7, 1923. |

*Due Board.

LETTER OF TRANSMITTAL

SACRAMENTO, CALIFORNIA, January 2, 1925.

HON. FRIEND WM. RICHARDSON,
Governor of the State of California,
Sacramento, California.

YOUR EXCELLENCY:

Conforming with the provisions of section 2 of the Medical Practice Act of the State of California, Charles B. Pinkham, M.D., Secretary-Treasurer of the Board of Medical Examiners, has the honor of respectfully presenting for your consideration the annual report showing the activities of this branch of the state government for the year 1924.

The financial report for the seventy-fifth fiscal year ending June 30, 1924, shows that the Board of Medical Examiners has successfully operated well within its budget allotment, closing with a goodly balance carried over into the seventy-sixth fiscal year.

Respectfully submitted.

CHARLES B. PINKHAM, M.D.,
Secretary-Treasurer, Board of Medical Examiners.

REPORT OF BOARD OF MEDICAL EXAMINERS, FOR THE YEAR 1924.

MEETINGS.

During the year just closed, the Board of Medical Examiners held three regular meetings. Written examinations as well as oral examination of reciprocity applicants were held at each meeting; *i. e.*, February in Los Angeles, July in San Francisco and October in Sacramento.

Between written examinations, oral examinations, legal hearings and routine business, the Board members have a most busy session of at least four days at each regular meeting.

APPLICATIONS.

California medical teaching institutions continue to graduate a goodly number of well educated doctors of medicine. These applicants for a written examination for a Physician's and Surgeon's certificate, are augmented by a large number of practitioners of medicine from other states that seek the allurements of residence in our glorious state.

The total number of applications filed in 1924 is slightly in excess of those filed in the year 1921, but less than 1922 or 1923. However, there were more graduates from medical colleges who filed applications for a written examination in 1924 than in any prior year. Reciprocity applications were less than those filed in 1923, although exceeding in number those filed in either of the two prior years.

| <i>Class of Applicant</i> | | <i>Filed 1922</i> | <i>Filed 1923</i> | <i>Filed 1924</i> |
|---------------------------|---|-------------------|-------------------|-------------------|
| A. | Physician and surgeon, written----- | 199 | 206 | 262 |
| D. | Physician and surgeon, government credentials | 37 | 26 | 12 |
| AB. | Physician and surgeon, oral, Section 12 $\frac{1}{2}$ | | | |
| | Osteopathic ----- | 6 | 0 | 0 |
| BB. | Drugless practitioner, written | | | |
| | Osteopathic ----- | 0 | 0 | 0 |
| | Chiropractic ----- | 83 | 19 | 0 |
| C. | Reciprocity, physician and surgeon----- | 442 | 632 | 452 |
| CB. | Osteopathic, reciprocity ----- | 20 | 0 | 0 |
| CBB. | Drugless, reciprocity ----- | 14 | 0 | 1 |
| CE. | Chiropodist, reciprocity ----- | 1 | 3 | 2 |
| E. | Chiropodist, written ----- | 1 | 13 | 14 |
| F. | Midwife, written ----- | 28 | 11 | 10 |
| | Midwife, reciprocity ----- | 0 | 0 | 1 |
| | | <hr/> 831 | <hr/> 910 | <hr/> 756 |

The above table discloses: 1. That the Medical Practice Act requires the Board to conduct written examinations for physicians and surgeons, for drugless practitioners, for chiropodists and for midwives.

2. That provision is made for licensing those presenting satisfactory credentials showing commission in the U. S. A., U. S. N. or U. S. P. H. Service.

3. That applications for certificates to practice in California may be filed on credentials from other states (reciprocity) by physicians and surgeons, drugless practitioners, chiropodists and midwives.

The Osteopathic Act passed at the November, 1922, election took from the Board of Medical Examiners all jurisdiction over graduates of osteopathic schools. After midnight of December 21, 1922, all jurisdiction passed to the Board of Osteopathic Examiners, hence the Board of Medical Examiners can not receive applications from graduates of osteopathic schools. The chiropractic initiative, in effect the same date,

requires graduates from chiropractic schools or colleges to file applications with the Board of Chiropractic Examiners created thereunder, and not with the Board of Medical Examiners.

CERTIFICATES ISSUED.

The total number of certificates issued during 1924 were less than those issued in either of the two previous years, as disclosed by the following table:

CERTIFICATES ISSUED IN 1922, 1923 AND 1924.

| <i>Class of Applicant</i> | | 1922 | 1923 | 1924 |
|---------------------------|------------------------------------|------|------|------|
| A. | Physician and Surgeon: | | | |
| | (a) Written examination | 198 | 183 | 249 |
| | (b) Government credentials | 26 | 18 | 16 |
| AB. | Physician and surgeon, Section 12½ | 0 | 0 | 0 |
| C. | Reciprocity—Physician and Surgeon: | | | |
| | (a) Direct | 322 | 404 | 313 |
| | (b) Oral | 85 | 86 | 62 |
| BB. | Drugless, written | 43 | 3 | 0 |
| CB. | Reciprocity, osteopathic | 24 | 0 | 0 |
| CBB. | Reciprocity, drugless | 12 | 0 | 0 |
| E. | Chiropody, written | 1 | 13 | 11 |
| CE. | Reciprocity, chiropody | 1 | 2 | 1 |
| F. | Midwife | 14 | 4 | 9 |
| Totals | | 725 | 713 | 661 |

EXAMINATION STATISTICS FOR 1924.

Physicians and Surgeons, California Schools.

| <i>Medical School</i> | <i>Applicants</i> | | <i>Percentages</i> | |
|--|-------------------|---------------|--------------------|---------------|
| | <i>Passed</i> | <i>Failed</i> | <i>Passed</i> | <i>Failed</i> |
| University of California Medical School | 43 | 0 | 100.0 | 0 |
| Stanford University Medical School | 24 | 0 | 100.0 | 0 |
| *College of Physicians and Surgeons, Medical Department, University of Southern California | 1 | 3 | 25.0 | 75.0 |
| College of Medical Evangelists | 60 | 3 | 95.24 | 4.76 |
| College of Physicians and Surgeons, S. F. | 0 | 1 | | 100.0 |
| Extra state schools | 122 | 23 | 84.14 | 15.86 |
| Totals | 250 | 30 | 89+ | 10+ |

*Closed, 1920. Undergraduate unfinished education completed in another school but diploma of parent school issued.

| <i>Chiropody</i> | <i>Applicants</i> | | <i>Percentages</i> | |
|--|-------------------|---------------|--------------------|---------------|
| | <i>Passed</i> | <i>Failed</i> | <i>Passed</i> | <i>Failed</i> |
| California College of Chiropody, San Francisco | 11 | 2 | 84.62 | 15.38 |
| <i>Midwives</i> | | | | |
| Extra state schools | 11 | 7 | 61.11 | 38.89 |

COMPARISON OF APPLICATIONS FILED FOR RECIPROCITY CERTIFICATES WITH THE NUMBER OF CERTIFICATES ISSUED.

| | <i>Applications Filed</i> | | | <i>Certificates Issued</i> | | |
|---------------------------|---------------------------|------|------|----------------------------|------|------|
| | 1922 | 1923 | 1924 | 1922 | 1923 | 1924 |
| Physician and Surgeon (C) | 442 | 602 | 452 | 407 | 490 | 375 |
| Osteopathic (CB) | 20 | 0 | 0 | 24 | 0 | 0 |
| Drugless (CBB) | 14 | 0 | 1 | 12 | 0 | 0 |
| Chiropody (CE) | 1 | 3 | 2 | 1 | 2 | 1 |
| Midwife (CF) | 0 | 0 | 1 | 0 | 0 | 1 |
| | 477 | 605 | 456 | 444 | 492 | 377 |

The following tabulation by states showing the reciprocity certificates issued to Physicians and Surgeons by the California Board to individuals licensed by other state examining boards manifests that the

majority have been issued to applicants from those states that show the largest registration of practitioners of the healing art:

| | 1923 | 1924 | | 1923 | 1924 |
|----------------------|------|------|--------------------|------|------|
| Alabama | 6 | 3 | Nevada | 3 | 6 |
| Alaska | 0 | 0 | New Hampshire | 3 | 1 |
| Arizona | 7 | 2 | New Jersey | 1 | 1 |
| Arkansas | 1 | 2 | New Mexico | 1 | 1 |
| Colorado | 10 | 9 | New York | 27 | 26 |
| Connecticut | 2 | 0 | North Carolina | 0 | 1 |
| Delaware | 0 | 0 | North Dakota | 10 | 3 |
| District of Columbia | 1 | 0 | Ohio | 15 | 12 |
| Florida | 1 | 0 | Oklahoma | 6 | 7 |
| Georgia | 4 | 3 | Oregon | 12 | 9 |
| Hawaii | 3 | 1 | Pennsylvania | 28 | 16 |
| Idaho | 12 | 5 | Philippine Islands | 0 | 2 |
| Illinois | 77 | 61 | Rhode Island | 2 | 1 |
| Indiana | 20 | 15 | South Carolina | 1 | 2 |
| Iowa | 27 | 21 | South Dakota | 8 | 4 |
| Kansas | 19 | 11 | Tennessee | 6 | 7 |
| Kentucky | 6 | 4 | Texas | 14 | 5 |
| Louisiana | 8 | 5 | Utah | 7 | 9 |
| Maine | 1 | 1 | Vermont | 2 | 1 |
| Maryland | 8 | 7 | Virginia | 1 | 2 |
| Massachusetts | 8 | 12 | Washington | 22 | 8 |
| Michigan | 6 | 8 | West Virginia | 3 | 1 |
| Minnesota | 14 | 16 | Wisconsin | 10 | 5 |
| Mississippi | 2 | 1 | Wyoming | 1 | 1 |
| Missouri | 17 | 16 | | | |
| Montana | 19 | 19 | Totals | 492 | 375 |
| Nebraska | 30 | 22 | | | |

But nineteen licentiates of the Board of Medical Examiners of California have sought registration in other states during 1924, as against forty-one in 1923, as will be seen by the following list showing the name of the state where registration was sought, and the date California endorsed the application of her licentiate seeking entry in a sister state:

Arkansas—

Holt, Wm. Leland, M.D., March 13, 1924.

Iowa—

Williams, Geoffrey, M.D., April 18, 1924.

Scoles, Hudspeth E., M.D., May 29, 1924.

Michigan—

Kopp, Anna, M.D., March 13, 1924.

Cottrell, Martha S., November 20, 1924.

Minnesota—

Muldoon, Madeline A., October 6, 1924.

Missouri—

Abbott, Le Roy Chas., M.D., January 17, 1924.

Reno, Vincent, M.D., February 28, 1924.

New Jersey—

Bernheim, Louis, M.D., December 3, 1924.

New York—

Hamilton, Gilbert V., M.D., November 20, 1924.

North Dakota—

Seibel, John J., M.D., December 18, 1924.

Ohio—

Higbee, Annie S., M.D., September 11, 1924.

Locke, Charles E., Jr., M.D., November 12, 1924.

Oregon—

Haysmer, Clyde A., M.D., September 25, 1924.

Pennsylvania—

Bailey, John Holeman, M.D., October 3, 1924.

Virginia—

Edwards, Herbert R., M.D., March 27, 1924.

Washington—

Van Orden, Kate P., M.D., July 17, 1924.

Wisconsin—

Crawford, Albert Sturges, M.D., September 18, 1924.

Hager, Benjamin Harry, M.D., September 24, 1924.

HEARINGS.

At each regular meeting, the Board has conducted hearings of complaints filed against those licensed under the Medical Practice Act of this state who have been charged with violation thereof.

Those called before the Board during 1924 and action thereon are as follows:

| Name | February meeting | July meeting | October meeting |
|---------------------------------|---------------------------|-------------------|--------------------|
| (b) Adcox, R., M.D. | | Revoked July 7. | |
| (e) Berry, John Lafayette, M.D. | Dropped; prior revocation | | |
| (d) Coleman, Stuart, M.D. | | Cont'd to October | Cont'd to Feb. '25 |
| (a) Dietsch, Curt O., M.D. | | Revoked July 8. | |
| (b) *Dymont, Philip, M.D. | | Revoked July 9. | |
| (d) Dutcher, Willis W., M.D. | Guilty | | To appear Feb. '25 |
| (d) Fisher, James T., M.D. | | | Cont'd to Feb. '25 |
| (a) Haigh, Frederick, M.D. | Dismissed Feb. 20. | | |
| (e) Holsman, Chas. K., M.D. | Continued | Continued | Cont'd to Feb. '25 |
| (a) Hummel, Heinz Geo. A., M.D. | Revoked Feb. 21. | | |
| (d) Kvello, Olaf A., M.D. | | Revoked July 10. | Pro. Oct. 20, '24 |
| (e) Mace, Robt., M.D. | | Continued | Revoked Oct. '23 |
| (d) Macmillan, Hugh Allen, M.D. | Guilty Feb. 19. | | To appear Feb. '25 |
| (d) Martin, James J., M.D. | | | Cont'd to Feb. '25 |
| (d) Meredith, Charles, M.D. | Probation one year. | | |
| (e) Reawick, Robt., M.D. | | Continued | Cont'd to Feb. '25 |
| (d) Rice, Newton J., M.D. | | | Cont'd to Feb. '25 |
| (b) *Rinaldo, Eugene, M.D. | | Revoked July 9. | |
| (e) Sanford, James, D.C. | | | Cont'd to Feb. '25 |
| (e) Smith, Frank L., M.D. | Revoked Feb. 20. | | |
| (a) Stone, Augusta, M.D. | Revoked Feb. 20. | | |
| (d) Sturges, Roy L., M.D. | | Probation July 8. | |
| (d) Thwaites, Geo. Edwin, M.D. | Revoked Feb. 2. | | |
| (e) Viereck, Henry C., M.D. | | Revoked July 8. | |
| (e) Wyman, George H., M.D. | | | Revoked Oct. '23 |
| (b) *Young, Frank P., M.D. | | | Revoked Oct. '22 |

*Writ of review pending.

The violations for which the above licentiates were called before the Board of Medical Examiners are classified as follows:

| | |
|-----------------------------|----|
| (a) Abortions | 4 |
| (b) Diploma Mill conspiracy | 4 |
| (c) Habitual Intemperance | 1 |
| (d) Narcotic violations | 11 |
| (e) Miscellaneous | 7 |
| Total | 27 |

Decisions of the Board, following hearing of the evidence, were recorded as follows:

| | |
|-----------------------------|----|
| Guilty—certificates revoked | 12 |
| Guilty—probation | 3 |
| Guilty—no penalty imposed | 2 |
| Dismissed | 3 |
| Pending | 7 |
| Total | 27 |

LEGAL REPORT OF THE NORTHERN DISTRICT—1924.

Violations of Section 17 of the Medical Practice Act.

| Name | Location | Date initiated | Disposition |
|-------------------------------|---------------|----------------|--|
| Adgar, Joseph | Oakland | 12/3/24 | 12/7/24. Entered plea of guilty. Sentence suspended for six months. To discontinue practice. |

| Bail forfeitures | 1 |
| Dropped from calendar | 3 |

Total fines and bail forfeitures..... \$1,350 00

On July 25, 1924, indictments were returned charging all of the following individuals with a conspiracy to violate the Medical Practice Act.

These indictments were the result of a special session of the grand jury of San Francisco County, held on July 9, 1924. All of these cases are now pending trial in Department No. 6 of the Superior Court of San Francisco.

LEGAL REPORT OF SOUTHERN DISTRICT.

LOS ANGELES, California, January 1, 1925.

DEAR DR. PINKHAM:

Submitted herewith is an annual report of the Investigation Department for the Southern District of the Board of Medical Examiners of the State of California for the year ending December 31, 1924.

Cases for Violation State Medical Practice Act, pending January 1, 1924.

(There are omitted from the following list all cases initiated against chiropractors which were included in the 1924 annual report as pending, and in which we have no information of any action having been taken subsequently. The greater part of these omitted cases have for a long time been pending in the Los Angeles Police Court, and request has been made that such of these cases as are pending in said court be dismissed.)

Change of Name.

Eighteen licentiates of the California Board have recorded their change of name during 1924, and corresponding entries made on our records:

| Date | Present name | Former name |
|--------------------|----------------------------|-------------|
| February 14, 1924 | Adams, Hovsep Garo | Adamian |
| October 30, 1924 | Barnett, Anna F. | Franklin |
| February 28, 1924 | Beetham, Grace S. | Simon |
| October 30, 1924 | Bowles, Ethel H. | Havenner |
| October 30, 1924 | Brown, Isabel D. | De Young |
| February 28, 1924 | Cottrell, Martha S. | Sanderson |
| July 31, 1924 | Davis, Elizabeth J. | Jamieson |
| February 14, 1924 | Fate, Margaret W. | Wilson |
| October 3, 1924 | Franklin, Frances I. K. | Klingberg |
| January 9, 1924 | Franks, Helen Lucille W. | Williamson |
| February 28, 1924 | Heald, Elizabeth S. | Schulze |
| September 11, 1924 | Higbee, Annie E. C. | Carveth |
| June 26, 1924 | Hutchins, Millicent L. H. | Huckins |
| June 26, 1924 | Kronkowski, Casemyra C. S. | Swantek |
| July 17, 1924 | Kulaev, Antonia A. M. | Maximova |
| February 28, 1924 | Mann, Allen Isaac | Isaacman |
| October 9, 1924 | Melson, Madeline M. | Muldoon |
| December 24, 1924 | Steffen, Julia B. | Bopp |

DECEASED.

The year 1924 marked a decided increase in deaths of those licensed in the healing art in the State of California as compared with prior years.

In the list below, those names marked with an asterisk indicate the individuals reported as graduates of medical colleges, not licensed to practice in this state:

OUR MEDICAL PRACTICE ACT.

In October, 1923, the country was startled to learn the magnitude of the traffic in fraudulent medical credentials, diplomas and state licenses, as disclosed by the St. Louis Star, which financed an energetic reporter named Harry Thompson Brundidge, who, under the name of Harry Thompson, by his purchase of a medical diploma from the National University of Arts and Sciences, St. Louis, Mo., a diploma from the Progressive College of Chiropractic, and a license to practice medicine in the state of Tennessee, unravelled the whole nefarious scheme.

Thompson's story, as related in the St. Louis Star, also in the issue of Collier's Weekly April 5, 12 and 19, 1924, is strikingly interesting from the standpoint of crooked dealings, yet horrifying when considered from the standpoint of human sacrifice, for the result of the traffic was the placing of human lives in the hands of diploma-mill products, many of whom without professional training, are said to have fraudulently obtained in certain states a license to practice as a physician and surgeon.

Where shall we place the blame for the existence of such conditions? Shall we blame (1) the state which permits the incorporation and operation of questionable schools? (2) The laxity of state laws which permit the granting of a license on fraudulent credentials? (3) The cupidity of man, or (4) the carelessness of state officials in enforcing the provisions of its Medical Practice Act?

The fact that such a nefarious scheme could be so universally carried out makes us pause to consider the Medical Practice Act of California, enacted for the protection of the public and for the suppression of the charlatan, of which California has a goodly number.

A model Medical Practice Act has been fully and ably discussed by representatives of the various medical examining boards, the medical authorities and educators, all of whom for years have made an intensive study of the subject. All conclude that it is practically an impossibility to create a model Medical Practice Act that will dovetail into the statutes of each state. It is conceded, however, that there are certain basic principles to be included in all medical acts and on this foundation a satisfactory act may be framed to accord with the statutes of each state.

An ideal medical act should be constructed around six basic features; namely—

(I) Minimum educational standard, both preliminary and professional, required of each applicant for an unlimited license. He who seeks a limited license should be required to have the same minimum of preliminary and the same professional training for two years that is required of the applicant for an unlimited license.

(II) Power of approval over schools seeking to qualify applicants for any form of license or certificate to practice any system of the healing art.

(III) The provisions for the examination of the applicant should be sufficiently searching to test his qualifications.

(IV) Disciplinary authority over those who have been licensed.

(V) Comprehensive provisions for adequate enforcement, with penalties sufficiently severe to effectively stop violation of law.

(VI) Annual reregistration.

California may well feel proud that our Medical Practice Act embraces all the desirable features mentioned. As vulnerable points have been found in our act, the weakness has been corrected by amendment until now we have a law that, despite onslaughts from every angle, has been declared constitutional by some sixteen state and federal Appellate and Supreme Court decisions.

One of the first attacks was *P. L. Crane vs. Hiram W. Johnson, Governor* (242 U. S. 339), wherein it was alleged that the Medical Act discriminated between forms of healing the sick and the use of prayer and other drugless methods, and it sought to revoke the equal protection clause of the fourteenth amendment of the constitution of the United States, as an argument for a review of the decree of the District Court of the U. S., Southern District of California, which **DENIED AN INTERLOCUTORY INJUNCTION** to restrain the enforcement of a State Statute (California) requiring drugless practitioners to have completed a prescribed course of study and thereafter to have passed an examination before obtaining legal authority to practice in this state. The plaintiff appealed and the U. S. Supreme Court affirmed the judgment.

The constitutionality of the act was again attacked in *Ex Parte Chow Juan* (235 Fed. 1014) wherein a chinese herbalist having been convicted of violation of the Medical Act, petitioned the federal court for a writ of habeas corpus, alleging unconstitutionality of the act, claiming:

(1) That the title of the act was defective, but the court ruled that the courts of California have already declared the title valid:

(2) It was further contended that the act was unconstitutional because of its provisions regulating drugless healers, in that it defines the drugless practitioner as one who treats diseases without the use of drugs and without in any manner severing * * * any tissues of human beings, etc., arguing that such practitioners do continuously "sever" the tissues of human beings in their particular mode of treatment.

(3) It was further contended the Act was unconstitutional because it gives to the Board of Medical Examiners the power arbitrarily to determine the fitness of applicants for certificates and the *standard of colleges*—without regard to any standard fixed by the legislature.

(4) That the act interferes with interstate commerce, because it prohibits or unduly burdens the sale of imported herbs.

After a careful consideration of all the legal arguments, the court **DENIED THE APPLICATION FOR THE WRIT OF HABEAS CORPUS** and thereby sustained the constitutionality of the act.

There are many other decisions establishing the constitutionality of various sections of the act, approximating in all over fifty important decisions, including state and federal, supporting the present Medical Act and its administration by the Board of Medical Examiners.

The California Medical Practice Act has weathered the storm and its constitutionality is well established.

II—APPROVAL OF SCHOOLS.

The power of approval of schools is a vitally essential factor in every medical practice act. Lax corporation laws in the majority of states permit the creation, legal recognition and operation of nondescript schools. In practically every state in the Union, including California,

it is possible to incorporate a "sundown" institution, and without demanding any showing of adequate financial responsibility, physical equipment or teaching personnel, the state grants authority to irresponsible individuals to grind out diplomas of all sorts.

The enactment of laws safeguarding the chartering of medical teaching institutions is quite as important as the enactment of laws that fix the standards of medical licensure.

One of the ringleaders in the "diploma mill" in Missouri boasted he could furnish any one of 640 degrees. Some of these were outright forgeries, while others were signed by dishonest individuals formerly operating questionable medical schools, or by dishonest officials.

The removal of the power of approval from the Medical Practice Act of Missouri by legislative enactment of 1921 is held accountable for the wholesale traffic in medical diplomas recently reported in that state.

Let us present a brief survey of the Missouri situation:

(1) The nefarious traffic of the diploma mill was made public in October 1923;

(2) The questionable medical schools soon thereafter were inspected by the Missouri board;

(3) Attorney General Jesse W. Bartlett is quoted in the *Federation Bulletin* of November, 1923, p. 275, as saying:

"The State Board of Health has made charges against certain medical schools which are of a most serious nature. If even half of the state board's allegations can be proved, the schools ought to be put out of business. The practices which are alleged are intolerable.

"In order to give the State Board of Health and the defendants an opportunity for placing their evidence fully before the Court, I shall probably file *quo warranto* proceedings asking for the forfeiture of the corporate charters, that form of action being the quickest and most direct. Our action, of course, will be taken promptly."

(4) Jackson (Missouri) grand jury reported in January, 1924, to have indicted:

Date R. Alexander, M.D., secretary and reported owner of the Kansas City College of Medicine and Surgery;

Robert Adcox, M.D., alleged principal in the diploma mill frauds;

Ralph A. Voight, M.D., alleged chief and brains of the diploma mill.

So far as we can learn, other than the conviction of Robert Adcox and the revocation of his Missouri license, there has been no other definite action, so it would seem that the whole affair has been a mere "flash in the pan" so far as the state of Missouri is concerned.

The power of approval of schools incorporated in the California Medical Practice Act will keep from our confines the product of the questionable schools reported in Missouri and other states.

Continuing the consideration of the six basic features of an ideal medical practice act, we will touch upon:

III—EXAMINATIONS.

Some state boards require that a portion of the examination of an applicant shall be at the bedside. We have always felt our examinations sufficiently searching to accurately determine an applicant's

fitness. Our law demands ten questions to be answered in the written examination on each of nine subjects, with a general average of 75 per cent and that the applicant shall not fall below 60 per cent in more than one subject.

IV—CITATIONS.

Section 14 of the California Medical Practice Act sets forth the causes for calling a licentiate before our Board to show cause why his license should not be revoked for unprofessional conduct, and the causes for citation are far more comprehensive than are found in the laws of a majority of the states. One day of each regular meeting of the California Board is set aside for legal hearings, which invariably last until midnight and not infrequently continue to the following day. After hearing the evidence the board either dismisses, places on probation, suspends the license for a specified time or revokes.

Now that the "diploma mill" expose has unearthed the consummate arrogance with which certain licentiates of our state not only defy punishment but glory in their "protection," it is apparent that section 14 must be strengthened by incorporating a subdivision making the "peddling" of fraudulent medical diplomas, etc., a cause for revocation of the right to practice under the Medical Act.

The penalty for selling fraudulent diplomas or other credentials used to obtain the right to practice in this state, must be made a felony rather than a misdemeanor. The public is entitled to protection against the product of those harpies engaged in the wholesale peddling of fraudulent credentials, which, under our present reciprocity law, occasionally allows one with fraudulent credentials to gain the right to practice in California.

V—ENFORCEMENT.

Our law, with one exception, provides sufficient penalties for violation. If the judiciary feel inclined, sentences amply severe to discourage violation may be imposed.

The problems of enforcement are numerous, varying according to the political complexion of each county in our state. In some the authorities are zealously active in enforcing the law, while in other counties we have no success whatever in arousing enforcement officials to even a partial realization of their duty. The game of "passing the buck" played by the authorities in some of our counties would be amusing were it not such a sad reflection on our ideals of government. The problems of enforcement were discussed in the 1920 annual report of the Board of Medical Examiners, published in our 1921 directory.

With all our handicaps we are accomplishing far better enforcement results than many of the other states. "There are states in which there has not been a single prosecution under the Medical Practice Act in years, yet this is not because there are no violations. (*Federation Bulletin*, February 1919, p. 34.) In the same article we read with interest that "in the city of Chicago, Illinois, out of eighty cases brought into court, seventy-eight convictions were had." The secretary of the Michigan board is quoted in the *Federation Bulletin* of August, 1916, as stating "In case of a prosecuting attorney who refuses to take notice of a complaint, the governor writes him a letter and asks why no prosecution is had, and if he does not give a proper reason he is liable to

be dismissed from office, and that has a tremendous influence for good in our state."

VI—ANNUAL REGISTRATION.

Much has been said in favor of annual registration and California may well be proud of her acumen when in 1917 the legislature enacted the provision for the annual reregistration fee of \$2. This enactment, for the first time since 1878 when medical licensing became effective in California, provided a means for accurately determining who of the many thousands of licentiates were living and where they could be found. Until 1916 no directory had been published by the California Board of Medical Examiners for years; however, the Medical Society had published an annual directory, which was both inaccurate and non-official. Many names of deceased were carried, as were also the names of individuals who had no license to practice in California, this for the purpose of protecting the "copyright" according to reports. On the other hand, the names of many who were licensed to practice medicine and surgery under the laws of California were omitted. Non-licensed practitioners operated throughout the state, quacks were prevalent and charlatans rampant, because information regarding licentiates was chaotic.

Other states had the same experience.

In 1906 when the American Medical Association began compilation of its directory, many of the state boards were unable to produce lists of legally qualified physicians which were in any way complete, while practically in every state I referred to the Secretary of the Board the names of a large number of physicians reported as being in practice in the state and having been practicing for years, whose names did not appear on their records at all. The discrepancies, errors and omissions in the official records were such as to make the accurate compilation of the first edition of the directory impossible.—(*Federation Bulletin*, February 1919, p. 34.) SUCH A CONDITION AS JUST DESCRIBED IS NOT POSSIBLE IN STATES THAT HAVE AN ANNUAL REGISTRATION LAW.

The advantages of annual registration may be briefly stated as follows:

1. It affords opportunity for keeping constantly in touch with the licensed individuals. An individual once licensed would drift away and never be heard of again were the annual tax not operative. This "loss" of the individual would necessitate carrying thousands of names in a directory, a large proportion of which might be deceased.
2. Annual registration is invaluable as a means of keeping accurate addresses.
3. It enables immediate discovery of individuals who may be practicing on the licenses of deceased.
4. It gives certain control over discreditable practitioners.
5. The annual registration plan is favored by many of the leaders of the medical profession throughout the country who are familiar with the difficulties in stabilizing a medical practice act.

Mr. Francis Shepardson, former director of the Department of Registration, State of Illinois, decried the fact that Illinois did not have an annual registration. He stated that in 1918 there were 29,936 medical men licensed in Illinois, but that the department had no check

on some 17,000 as to whether they were alive or dead; that imposters were using the licenses of dead practitioners; that fakers, quacks, and irregular practitioners were unchecked for the lack of legal machinery. Mr. Shepardson offered as a further argument, "The advantages of an annual registration as an effective weapon for protecting the profession and for aiding in the prosecution of pretenders and offenders." He further states that he had heard but two objections, namely:

(1) The alleged superior dignity of the medical profession when compared with others, and in answer to this says "as a disinterested layman it is my frank opinion * * * there is absolutely no basis, except perhaps a historic one for such pretension."

(2) The other objection might be the inconvenience of having each year to send a small check in response to official notice from the office of the board. This is hardly a logical objection, inasmuch as practically all of us fulfill the same obligation as members of various civic or fraternal orders.

David Strickler, M.D., president of the Federation of Medical Examining Boards, urges the annual registration of practitioners, stating "in no other way can boards of licensure and registration keep in close touch with its licentiates, which is necessary for their successful supervision."

U. S. Senator Royal Copeland, for several years Health Commissioner of New York and familiar with the difficulties in checking up irregular practitioners, made the statement in the *St. Louis Star* of November 27, 1923, "There can be no certainty of relief from this situation (diploma mill frauds) UNTIL THERE IS A REGISTRATION LAW IN EACH STATE requiring every doctor to register annually. I can not think of any better way to check up on the quacks."

The *New York Medical Journal* is quoted in the *Bulletin* of the Federation of Medical Examining Boards, November, 1922, as strongly urging annual registration.

Delaware, where the plan has been in successful operation for eighteen years, reports the results highly beneficial. (*Federation Bulletin*, 1919, p. 206.)

District of Columbia, Florida, Georgia, Indiana, Iowa, Maryland, Massachusetts, Mississippi, Rhode Island, South Dakota and Wisconsin strongly favor annual registration.

A bill recently defeated in the New York legislature, sponsored by the Medical Society of the state of New York and the State Board of Regents, called for annual registration. This bill, "strongly opposed by certain physicians" arose from the fact that there are hundreds of illegal practitioners reported as practicing in the state of New York without the possibility of accurate check.

Frederick F. Van De Water, writing in the *Ladies Home Journal* of July and August, 1924, on "Fake Doctors," wherein he exposed the diploma mill operations, relates Pennsylvania legislation as follows: "The law provides for the *annual* registration of all licensed physicians in the state. This would make it easy to tell the qualified doctor from the fake. The line of demarcation would be clear. * * *" The article relates New York's attempt (which failed) to pass an annual registration law, which had aroused much protest. "The most fervent objections arising not from the quacks, but from certain physicians of

irreproachable standing. They objected to the measure as an invasion of the sacred rights of the medical fraternity and when they finished dwelling upon these, they say in addition that it would be a nuisance, which only goes to show that the quack is not entirely responsible for the prevalence of quackery. The public, which steadfastly refuses to distinguish between science and fraud, must bear a large share of the burden, and the orthodox physician himself carry a little of its weight." Such is the viewpoint of a disinterested layman.

The ANNUAL REGISTRATION is particularly necessary in California since the creation of the chiropractic and osteopathic boards under the initiative acts of 1922. Each of these acts requires annual registration on payment of a \$2 fee. The Osteopathic Board has issued a directory of its licentiates, but so far none has been published by the Chiropractic Board.

A copy of the directory published by the Board of Medical Examiners is mailed gratis to every licentiate who has paid his annual tax, and we are convinced that our 7000 copies so distributed are appreciated, particularly by those who have experienced the inaccuracies of the years preceding the era of California's annual registration.

In 1924 our sale of directories at \$2.50 each (just 50 cents more than charged for the inaccurate directories published prior to 1917, when the cost of printing, material and labor was far less than at present) netted \$474.50. Among those that purchased the directory of 1924 are city governments for their health work, numerous hospitals, Industrial and Compensation Insurance Commission, over twenty insurance companies, various pharmacies, federal enforcement officers, etc. Surely these can hardly be classed (as mentioned in a recent medical journal) as "dishonest vendors of service and things sold to cure disease."

It would be deplorable should California take a backward step by repealing the annual registration feature of the Medical Practice Act.

LIST OF APPLICATIONS PENDING AS OF DECEMBER 31, 1924.

LETTER OF TRANSMITTAL.

VETERANS' HOME, CALIFORNIA,
October 31, 1923.

To the Honorable FRIEND WM. RICHARDSON,
Governor of California,
Sacramento, California.

SIR: I have the honor to address to you this, my twenty-second annual report as president of the Board of Directors of the Veterans' Home of California, covering the seventy-fourth fiscal year.

The personnel of the directorate and of the officers of the home has remained unchanged during the fiscal year.

I hand you herewith reports of the commandant, secretary-treasurer, chief surgeon, engineer and adjutant.

On August 1st the directors elected Captain J. P. Edmunds as quartermaster-commissary of the home, a post he is eminently fitted to fill. Due to the change in this position there is no report covering the department as the former incumbent failed to file one.

Owing to lack of funds we have not been able to give the veterans under our care the small luxuries and comforts we would like to furnish them; but, on the whole, they have been well cared for and everything possible done to meet their needs. We are endeavoring to give to these men who offered their lives in the hours of the country's need every care and to do everything possible to make them happy and contented.

The needs of the hospital are increasing, due to the infirmities of advancing years and illness incident to service for the country.

The Civil War veterans grow more feeble as time passes and the younger men in our care are, as a rule, very sick and need the best of food and attention.

We feel that this home is unique in the state and is not to be classed with the institutions. Therefore, it should have special consideration. It is not a penal institute and it is not a hospital for insane, but is a home earned by those who were brave and self sacrificing enough to answer their country's call in the dark days of war.

Respectfully submitted.

SAMUEL W. BACKUS,
President, Board of Directors.

REPORT OF COMMANDANT.

From: Russell C. Martin, Colonel-Commandant.

To: President and Members of the Board of Directors.

Subject: Report for fiscal year ended June 30, 1923.

The commandant has the honor to submit the reports of the secretary-treasurer, chief surgeon, chief engineer and adjutant for the fiscal year ended June 30, 1923. These officers cover in detail the work of the different departments for the year. The commandant's report will refer to the general business of the home. This being my second year in command of the home I wish to report that many improvements have been completed with the generous appropriations allotted us by the 1921 legislature. Looking forward to 1923 the legislature appropriated money for two miles of six-inch iron water pipe to complete, or nearly so, our main water line to Rector Canyon, and when this is installed in place of the wooden pipe our water supply will be secure.

Since the fire in July, 1921, we have been without a horse barn but in the 1923 appropriations we have been allowed money to replace the barn.

The feeding of the members has been improved with only slight increase in cost, which tends to contentment. There is a continual change in membership though the total remains about the same. The admission of World War veterans is becoming a vital question. The United States has built and is conducting special hospitals for the care and rehabilitation of those who were disabled either in camp or trench. Specialists are provided who should give these veterans better care than can be given in national or state homes where these extra services and accommodations are not provided. We are asked to provide for this class of patients and as far as the law will allow we accept them and are glad to do so for this home and its officers are provided to assist these veterans.

There has been fine cooperation among the different departments which has resulted in a considerable economy. The accounting department under the secretary-treasurer has been efficiently conducted. The work of the secretary-treasurer has been increased from time to time by the addition of cashing pension checks; the office being a depository and issuing books of deposit for members of the home makes her position one of great responsibility in addition to the work of accounting.

The chief surgeon has conducted the hospital in an able manner and to the satisfaction of those under his care. The hospital is always a source of complaints as the men who are aged and ill are nervous and have many troubles and it requires a great deal of patience to satisfy.

The adjutant has kept the records of the home in excellent condition and has made many changes for the betterment of the service.

The chief engineer has one of the principal parts in the work of the home. The electrical, plumbing, steam heating, etc., coming under his supervision, it has required great study and tact to do the work required. This has been efficiently and satisfactorily done.

During the year there have been many entertainments for the members and employees including the three picture shows per week, and dances for the young people. All national and state holidays have been observed and special services on Memorial Day. At this service veterans of all wars participated. Owing to the enfeebled condition of a majority of our members the memorial services were held at the flag staff on the lawn. The home band has attended all the funeral services and has given daily concerts at the main and hospital band stands. Every member buried in the home cemetery is given a soldier's burial.

Our membership remains about the same total of present and absent as for the past five years. The number of Civil War veterans are decreasing with Spanish War and others increasing. We have only a limited number of World War veterans. It is the wish of the government that World War veterans go to United States disabled veterans' hospitals where special treatment can be given them. The treatment of these veterans is in a different class from old age veterans. During the summer months many aged veterans leave the home on passes or furloughs and return later for the winter. All Civil War veterans receive a pension of \$50 per month and a few an invalid pension of \$72 which allows them an opportunity to visit their friends during the good weather of summer.

Each succeeding year makes a great change in the physical and mental condition of our members. Not only are a great percentage failing fast physically but mentally and these latter are the most troublesome and require the greatest patience in trying to please them. It does not require any ability or effort to discharge a member of the home for any infraction of the rules but our mission is to try and learn the cause that we may remove the obstacles which confront these people and cause them to commit these errors and make life more pleasant and agreeable for them.

It is hoped the administration of the affairs of the home may be continued by those who originated the idea and have a direct interest in the care of these veterans.

Books are being added to the library every month, which keeps it up to date. The picture shows are a diversion for the members and are well attended.

My association with the board of directors, Board of Control, Engineering Department, State Purchasing Department as well as the official staff of the home has been very pleasant. I wish to thank everyone for their support and assistance and to have them know it is fully appreciated. We hope the coming year will find us united in doing service for these veterans.

Respectfully submitted.

R. C. MARTIN,
Colonel-Commandant.

REPORT OF SECRETARY-TREASURER.

VETERANS' HOME, October 31, 1923.

*To the President and Board of Directors,
Veterans' Home of California.*

(Through COLONEL RUSSELL C. MARTIN, *Commandant*.)

GENTLEMEN: I have the honor to submit herewith statement of receipts, disbursements and transactions in this department of the Veterans' Home of California for the seventy-fourth fiscal year, ended June 30, 1923.

REPORT OF HOSPITAL.

From: Major J. J. France, Surgeon, Veterans' Home, California.
 To: Colonel R. C. Martin, Commandant Veterans' Home, California.
 Subject: Annual Report of Hospital for the fiscal year ended June 30, 1923.

The following report is submitted for your approval:

| | |
|--|----------|
| Number of patients in hospital July 1, 1922..... | 135 |
| Number of patients treated during fiscal year 1923..... | 528 |
| Number of patients discharged from hospital during fiscal year 1923..... | 314 |
| Number of patients remaining in hospital at close of fiscal year 1923..... | 143 |
| Number of patients treated at "sick call" (out patients)..... | 12,868 |
| Number of deaths..... | 89 |
| Average age at death of Civil War veterans..... | 78 years |
| Average age at death of Spanish-American War veterans..... | 60 years |

We find in the fiscal year just ending that the men, as a rule, are better physically and a great deal more contented, not withstanding their ages and in many cases their generally enfeebled condition, which is very clearly demonstrated in Wards 5 and 6. This is primarily due to the increasing efficiency of the nurses, attendants and general hospital staff. The turnover in help has been very small compared to other years.

The number of deaths have been decreased by 19. A large number of these, I believe, have been prevented due to proper food and improved sanitary conditions.

I view with a great deal of satisfaction, the personal interest, taken by all those connected with the hospital in their duties relative to all the departments, and especially in the patients.

I wish to thank the board of directors for the loyal support they have given me at all times, also their constant and devoted interest in all things pertaining to the hospital.

J. J. FRANCE.

ANNUAL REPORT OF THE ENGINEER'S DEPARTMENT FOR 1922-1923.

GENERAL SAMUEL W. BACKUS, *President, and*
the Board of Directors,
Veterans' Home of California.

(Through COLONEL RUSSELL C. MARTIN, *Commandant.*)

GENTLEMEN: I have the honor to present herewith an annual report of the work performed by the various departments under my supervision as well as the work of the State Department of Public Works, Division of Architecture, for the fiscal year ended June 30, 1923:

OFFICES AND SHOPS.

New Cascade laundry machine installed in laundry; new electric motor installed in Lincoln theater for piano; sink made for carpenter shop; shoe shop reshingled; phone wires in S. P. depot have been insulated; electric light installed in hay loft at horse barn; feeding trough made for hog ranch; card tables made for G. A. R. hall; new door and box for library mail installed in post office; door made for dairy barn and one for paint shop; nine window sash for post store; picture frame for treasurer's office; truck and mixing base for bakery; a supply of plant boxes for florist; table for home chapel; desk and drawing board for adjutant's office; wash tray frame for post office; paint locker for paint shop; 2 meat boards and 6 meat boxes for butcher shop; car step for electric depot; step ladder and saw platform for carpenter shop; 2 lockers for G. A. R. hall; 2 screen doors for post office; packing case for adjutant's office; table for quartermaster's department; record filing case for Lincoln theater; casters placed under altar at G. A. R. hall; new copper slop sink installed at post store and new top placed on counter; new hydrants installed at hog ranch, post office and bowling alley; steam lard rendering kettle installed for new butcher shop; porch at foreman's cottage at chicken ranch screened; screened sleeping porch installed at post office.

BARRACKS AND QUARTERS.

Window and door screens and broom rack made for Company "D"; new lattice work placed at porch of south ward Company "G"; hardwood box made for Company "C"; hat and coat hooks placed in Companies "D" and "F".

RESIDENCES.

Foot stool made and culvert placed at commandant's residence; clothes closet, frame for laundry trays made and window shades made and installed in new residences of plumber and baker; step ladder made

for adjutant's residence; outlet cut in partition, serving shelf installed, table made and skylight screens installed at director's cottage; porch at farm foreman's residence remodeled and enclosed; shed erected in chicken yard at treasurer's residence; posts for new fence placed at chief surgeon's residence; hot water storage tank has been changed to a new location, bread board made and new shelf installed at director's cottage.

HOSPITAL.

Glazed bulletin board made; meat rack and metal guard for temperature regulator made and installed in refrigerating room; new top placed on kitchen range; new diaphragm placed in water regulator in refrigerating plant; electric fans overhauled and repaired where possible; new band stand erected on plot between main building and tubercular ward; work has been started on the installation of a new system of electric lighting in main building.

CARPENTER SHOP.

Seventy-two burial caskets made and a 10'' x 24'' light of glass placed in top of same; all repairs to buildings, etc., made as needed.

PAINT SHOP.

Checker board varnished and glazed for billiard hall; home band stand painted; foreman carpenter's cottage painted and glazed where needed; nine window sash painted and glazed for post store and counter painted and shellacked; table in home chapel painted and enameled; six meat boxes painted for butcher shop; chairs in band stand cleaned and varnished; interior of new laundry painted; three tables painted for post store; truck and mixing base painted for bakery; toilet in Company "A" painted; new band stand at hospital painted; wardrobe in captain's office Company "C" stained and varnished; porch steps at commandant's residence painted; twelve window and two door screens painted for Company "D"; tin roof of toilet at Company "C" given a coat of red lead paint; three screen doors painted for Company "G"; table painted for director's cottage; 245 dining chairs cleaned and varnished and 29 tables and 3 food carriers painted and enameled for main dining room; 83 headboards painted and lettered; 72 burial caskets stained and varnished; 131 lights of glass renewed around camp; repairs to furniture, etc., made as needed as well as all new work painted or stained and varnished where necessary.

TIN SHOP.

Galvanized iron trough made for new laundry; seven tin filing cases for treasurer's office; galvanized iron switch box for engineer's department; galvanized iron sink for baggage room; ten galvanized iron leader heads and galvanized iron chute for pouring concrete for engineer's

department; four lead roof plates, two 2-compartment galvanized iron wash trays made for baker's and plumber's residences; galvanized iron sink for foreman carpenter; two tin scoops for post store; wire shelving for refrigerator for plumber's residence; eight roof safes for new power house; three oil cans for tractor; fireplace shield made and sideboard lined with tin for commandant's residence; flush tank made for engineer's department; new strainer made and installed at septic tanks; sprinkler made for disinfecting can at hog ranch; strips for boiler front and collar for smoke stack made and installed at power house; serving table at director's cottage lined with zinc; spout made for new coffee mill at commissary; oil drip pans made for engine for refrigerating plant; new garbage wagon assembled and cover made for same; shelf and lining placed over sink in new butcher shop; two switch box covers made for engineer's department; five-gallon soup kettle made for director's cottage; 100-foot galvanized iron ridge roll and top ornament made and installed at new band stand at hospital; two 175-gallon soap mixing tanks made for laundry; galvanized iron wash tray made for foreman carpenter's cottage; three covered buckets made for paint shop; special oil can made for picture machine at Lincoln theater; copper strainer made for lard rendering kettle at butcher shop; smoke stacks and stove pipes made for band leader's cottage; blacksmith's, police sergeant's quarters, police quarters, farm foreman's residence, paint shop, adjutant's residence, chief surgeon's residence and cottage at cemetery; ten $\frac{1}{2}$ -gallon and one 1-gallon milk can, twelve 2-quart dippers, six flour scoops, thirty-nine garbage cans and twenty-four galvanized iron buckets made for quartermaster's department; two dippers, pie fruit cutter and two flour scoops made for bakery; three dishpans, two steamers, two copper strainers, three large meat pans, twin smoke stacks made and kitchen table covered with zinc for main kitchen; one quarter measure, one sprinkler, twelve large milk cans and milk tank and stand made for the dairy; hopper for refrigerating plant; shelving for meat room; drainage gutters for refrigerating plant; twelve 4-quart galvanized iron buckets; two steam cooker pans, forty-eight soup tureens, two dippers, sterilizer for tuberculosis wards; seven garbage cans; three tin bread boxes; wire shelving for refrigerator; two bake pans; seventy-two transom catches; two copper ladles; two biscuit cutters; eight square milk cans; four mush pans; six skimmers and five galvanized iron junction switch boxes made and pot stool and serving table covered with galvanized iron for hospital; repairs made to tin and ironware as needed.

ICE PLANT.

Three hundred twenty-six thousand, seven hundred twenty pounds of ice made and delivered and refrigeration furnished to meat and storage rooms in butcher shop and for milk rooms.

STATE WORK.

Repairs—Chap. 391-21.

Work Order No. 11.

Two cottages, five rooms and bath, one each for home plumber and home baker, have been erected under this work order, all work on same having been done by day labor; all work completed and cottages are now being occupied.

Work Order No. 13.

Interior painting of Companies "E," "G," "D," "F," "A" and "B," living rooms in administration building, farm foreman and florist's cottages, main dining room and hospital waitresses' quarters, tubercular ward at hospital and power house employees' quarters has been completed; tile roof of home band stand has been repaired; steps at west side of Chabot cottage have been torn out and replaced with new ones; concrete floors have been placed in lavatories in Companies "A," "B" and "D" and fixtures replaced and walls painted; the electric wiring system in the director's cottage has been overhauled and remodeled, wires placed in conduit, new switches placed and new fixtures installed, interior of building painted, wood work and linoleum varnished, plastering repaired where needed and new flooring placed at main entrance; roof of south annex to main dining room has been covered with tin, gutters placed and new down spouts installed; plastering in hospital and barracks has been repaired where needed; new wash bowl installed in Company "G"; steam sterilizer connected up in Ward 3 and concrete runways placed at entrances to Wards 3 and 5 of hospital; fibrestone floors have been laid in kitchen, pantry and hallways and trench dug, connections made and line run for oil supply for new range burner in director's cottage; new motor-driven dry tumbler has been installed in laundry; tin roof at hospital and main dining room waitresses' quarters has been repaired; interior of Lincoln theater painted, ceiling and rafters cleaned and oiled, walls and ceiling of men's toilet painted and seats in hall varnished; floor in G. A. R. hall painted and windows frosted; excavations made and concrete poured for foundations for new band stand at hospital.

Work Order No. 65.

A new automatic refrigerating machine has been installed at hospital, interior of refrigerating rooms painted and enameled, and cement finish placed on steps leading down to machine room.

Work Order No. 186.

Bull pens and corral fence around same have been erected at cow barn; dropping boards, laying boxes, etc., have been installed at new

chicken house; post holes dug, new posts placed and fencing erected for new chicken yards at east side of chicken ranch; posts set and timbers placed for new gate at entrance to chicken yard.

Power House—Chap. 679-21.

Work Order No. 201.

Three new boilers have been set up in power house, replacing boilers that had become unserviceable on account of age and new pumps both for water and fuel oil installed and hot water heating system installed to be used with boiler feed pumps; all boilers have been connected up and placed in service and are working satisfactorily; a concrete sump has been placed under steps at north entrance to Company "A" barracks for return water from steam lines and a motor-driven automatic pump installed to pump return water from sump to receiving tank in power house; new low pressure steam line to north end of camp has been installed in a concrete conduit, pipe laid and covered and top placed on conduit, new air compressor installed in power house for supplying air for automobiles. Excavations have been made in floor of old engine room in power house for a tank to be used for manufacture of ice for home use and tank and coils installed in same; refrigerating plant has been moved to new location in old engine room in power house and same is now in use for the manufacture of ice and for supplying refrigeration to new butcher shop meat and storage rooms and for milk room.

A new reinforced concrete addition has been placed on the north end of power house and is used as a laundry, butcher shop, meat room and storage room for salt meats, milk room, chicken room and a storage room that is being used as a room for lard rendering, all work in connection with this project has been completed and electric driven laundry machinery installed in laundry and same is now operating satisfactorily.

Respectfully submitted.

E. C. BOWMAN,
Chief Engineer.

REPORT OF THE ADJUTANT.

VETERANS' HOME, July 1, 1923.

To the President and Board of Directors,
Veterans' Home of California.

(Through COLONEL RUSSELL C. MARTIN, Commandant.)

GENTLEMEN: I have the honor to submit herewith statement showing statistics of membership of the Veterans' Home of California together with descriptive list of all members present and absent on June 30, 1923, for the fiscal year ended June 30, 1923.

STATISTICS.

| | |
|---|------------|
| Membership of Home June 30, 1922 | 816 |
| New admissions during the year: | |
| Survivors of the Civil War | 47 |
| Survivors of the Indian Wars | 15 |
| Survivors of the Spanish-American War | 123 |
| Survivors of the World War | 7 |
| Survivors of the Foreign Service | 3 |
| Total admissions | 195 |
| By readmission | 168 |
| Total gain | 363 |
| Losses during the year: | |
| By discharge, own request | 243 |
| By discharge, committed to insane asylum | 3 |
| By dropped, absent without leave | 18 |
| By dropped, not renewing furlough | 25 |
| By death | 89 |
| Total loss | 378 |
| Net loss | 15 |
| Membership of Home June 30, 1923 | 801 |
| Segregation as to Wars: | |
| Civil War | 363 |
| Indian Wars | 53 |
| Spanish-American War | 365 |
| World War | 11 |
| Foreign Service | 9 |
| Total | 801 |
| Average present during the year | 552.3 |
| Average present and absent during the year | 806 |
| Average absent with leave | 250.2 |
| Average absent without leave | 3.5 |
| Average sick in hospital (members) | 135 |
| Average age of members admitted | years 59.3 |
| Average age of Civil War veterans | years 80.2 |
| Average age of Indian War veterans | years 71 |
| Average age of Spanish-American War veterans | years 55.4 |
| Average age of World War veterans | years 30.2 |
| Average age of Foreign Service veterans | years 59.3 |
| Average age of all living members | years 59.2 |
| Average age of all members dying during the year | years 72.3 |
| Total admissions to June 30, 1923, inclusive | 8,312 |
| Highest number present during the year | 608 |
| Highest number present and absent during the year | 828 |
| Average temporary at post | 13.9 |

Average number sick, with leave, without leave, present, present and absent, whole number cared for, gain and loss, at Veterans' Home of California from June 30, 1890, to June 30, 1923.

LETTER OF TRANSMITTAL.

VETERANS' HOME, CALIFORNIA,
September 12, 1924.

To the Honorable FRIEND WM. RICHARDSON,
Governor of California,
Sacramento, California.

SIR: I have the honor to address to you this my twenty-third annual report as president of the Board of Directors of the Veterans' Home of California, covering the seventy-fifth fiscal year.

I submit to you herewith reports of the commandant, secretary-treasurer, chief surgeon, quartermaster-commissary, chief engineer and adjutant.

In December, 1923, the Home sustained a severe loss in the death of Colonel John C. Currier, who passed away while on a visit with his daughter in Massachusetts. Colonel Currier had been a director for many years and his services were of great value to the Home. His passing is deeply regretted by his associates on the Board, and by the officers, members and employees of the Home.

Mr. W. D. Wagner, State Director of Institutions, was appointed by the Governor to fill the vacancy occasioned by Colonel Currier's death. Mr. Wagner is eminently fitted to fill this office, both on account of his experience and because he is in close touch with state affairs and institutional work.

Mr. Harry E. Speas resigned from the directorate of the Home in September, 1923. Mr. Speas' services were valuable to the Home and his resignation was regretted by all.

The appropriations allowed us by the last legislature together with our government aid have been ample to provide for the veterans in the Home. It has been our effort to improve the food and to have as much variety as possible. We feel we have accomplished much in this line, but there is still a great deal to be desired. Good clothing is provided and issued as needed. Our allowance in the past, however, has not been sufficient for the clothing needed, and we are asking for an increase for the next biennium.

The sleeping quarters are not what we would like to have for the veterans. The buildings are very old and mostly in a delapidated condition. We are having a plot plan made of the grounds and it is our suggestion that a new building program be inaugurated and the oldest buildings be, in time, torn down. Our idea would be to ask the legislature for an appropriation for at least two buildings for each biennium until the building program is completed.

We have recently rehabilitated the library, adding new linoleum, chairs, tables and steel book cases. The veterans enjoy the library, spending many comfortable hours there, reading the numerous papers, periodicals and some five thousand books furnished for them.

The library is entirely furnished and run through the post fund, as are also the entertainments, picture shows, etc. Extras for the tables are also purchased from the post fund. This fund is entirely separate from the maintenance and support fund and is derived mostly from estates of deceased members which have remained unclaimed in the posthumous fund for five years, in accordance with the United States government regulations and the state laws. There is also some revenue from post store profits which goes to the post fund.

The special appropriations for permanent improvements as allowed by the last legislature have been employed for the purposes appropriated, with the exception of some of the work not yet completed.

The wheel chairs for the hospital patients have been purchased and we feel gratified to have been able to make this much needed improvement in the hospital.

The purchase of the Ford fire truck has been made and we feel this was a very wise provision.

The five thousand dollars allowed for painting buildings not being sufficient, an additional five thousand has been used from the unbudgeted reserve to complete the work. The painting is now about completed and the buildings present a neat, pleasing appearance.

In conclusion, I desire to express the thanks of the president and Board of Directors to the Governor, the state legislature, the State Board of Control, and all other state departments with which we have come in contact, for their uniform courtesy at all times and their assistance in administering the affairs of the Veterans' Home of California to the end that everything possible may be done for the veterans who have given to the country the best that was in their power to give.

Respectfully submitted.

SAMUEL W. BACKUS,
President.

REPORT OF COMMANDANT.

From: Russell C. Martin, Colonel-Commandant.
To: President and Members of the Board of Directors.
Subject: Report for Fiscal Year ended June 30, 1924.

As commandant of the Veterans' Home of California, I have the honor to submit the reports of the secretary-treasurer, chief surgeon, quartermaster-commissary, chief engineer and adjutant for the fiscal year ended June 30, 1924. These officers in their reports cover the work of the different departments of the Home for the year.

This being my third year in command, I wish to report the continuation of improvements. In my report of last year mention was made of the appropriation for two miles of additional six-inch iron pipe for our main line water supply. This was received and installed. With the dry summer just passing, if this improvement had not been made we would have been very short of water. The former wooden pipe would have been inadequate. I would recommend that we estimate to complete the whole line with iron pipe. I would also recommend that a survey of Rector Canyon, where the dam is located, be made to determine the under flow or seepage under the dam which is wasted.

For fire protection there has been installed a fire truck with 800 feet of hose, chemical tank and hose with all accessories, which makes an up-to-date fire protection. All fire hose has been tested and unsafe hose discarded. A fire alarm system has been purchased and is being installed, which will complete the recommendations of the state fire marshal. One of our worries is fire, as all our buildings are of wood construction and a dangerous risk.

The feeding of the members has required many hours of study to give proper food with the appropriation allowed for conducting the Home. The subsistence end of the problem is what leads to the members being contented. We have a great variety of people of all ages and conditions which taxes the ability of the officers of the Home to prepare a menu which is pleasing to all. Our average membership has slightly increased over 1923 and has every prospect of materially increasing in the future. The Home is admitting a few World War veterans and is working in harmony with the United States Veterans' Bureau.

The care of all veterans becomes a more vital question every year. I would recommend that our budget for the next biennium include a complete survey of the plot plan, which is nearly completed, to locate new buildings. Then ask for appropriations to build at least one building each two years, which in ten years would complete a proper Home. In doing this it would not be a great burden for any one year, but be divided so as to not create any hardship on the taxpayers.

There has been a fine cooperation by the officers of the different departments which has resulted not only in economy but pleasant working conditions. The accounting department conducted by the secretary-treasurer has been a model of efficiency and unfailing courtesy,

not only with the state officials but our members, who in their failing health are very critical and find fault at trifles. The secretary-treasurer is guardian for many of our incompetent members who have no friends, or if they have are too far away to take the guardianship. These duties make the office one of great responsibility as well as added work.

The chief surgeon has conducted the hospital in an able manner and has given those under his care excellent service. The hospital becomes a partial byword among our members for the reason they all think if they go there they are nearing the end. For this reason they do not like to accept care at the proper time, which would prolong their lives and perhaps return them to quarters for a long time, but remain in quarters too long refusing to accept the recommendations of the chief

Administration Building and Company A Barracks.

surgeon or commandant. This condition and feeling has been overcome to a great extent by our chief surgeon and a much better thought exists in this regard throughout the Home.

The adjutant's office has kept the records of the Home in fine condition and has completed changes for the betterment of the service. We made a requisition for headstones in August, 1922, which have not yet been delivered and we are now making another one to complete the death list to June 30, 1924.

The quartermaster-commissary's office has been efficiently conducted. His office covers a variety of duties which requires tact and ability as

well as experience. Our quartermaster-commissary has all these qualities and is doing wonderful work which the Home and its officers appreciate.

The chief engineer has one of the principal parts in the work of the Home. The electrical, plumbing, steam heat, etc., being under his supervision. There have been many repairs to the buildings which have been done economically as well as quickly, keeping all work up to date. The work of installing the new iron water pipe was done under his supervision.

The outsides of all the buildings have been painted which adds very much to the appearance of the Home and its grounds. The painting and cleaning of the buildings creates an interest in the members who become more contented as they see an interest in their care and welfare. This work was supervised by the chief engineer.

During the year many entertainments have been given for the members and employees. For several years there have been given three picture shows a week at Lincoln theater. A nominal charge is made for those who get pensions or employees who are working but any member without funds has a pass. All national and state holidays have been observed. There are special services on Memorial Day. At this service veterans of all wars participate. For several years these services have been held on the lawn at the flag staff as a majority of our members are not able to walk to the cemetery. The United Spanish War Veterans from about northern California held services at the Home in honor of Manila Day.

The Home band has attended all funeral services and has given daily concerts at the main and hospital band stands. Every member buried in the home cemetery is given a soldier's honors.

Our membership is higher this year than last but the average for the past five years is about the same. The Civil War veterans decreasing and the Spanish War veterans increasing. During the summer months some of the members visit among their friends which reduces the average present in those months. Every year makes a change in the mental as well as the physical conditions of our members. Though our death list has been much less during the past two years than years before with same number present, our great obstacle to the improvement of our Home and its members is the "bootlegger," who is not only present on the grounds but is always in evidence whenever our members go off the premises. The sheriff of the county has raided the different places about the valley but the restraint is only temporary. The laws of our state do not cover one of our critical situations which causes the officers of the Home many hours of worry. When our members get intoxicated or are addicts of narcotics we have no authority to control them and give them the care the Home is intended to give. Comparatively few are addicted to these habits but those are the ones who are troublesome. We get severely criticised by the outsiders who think we should care for these members and not let them drift about the community. The Home or its officers are powerless to do this and have to sit idle and allow conditions to exist which they can not correct. If we discharge one of these members he only goes out as a public charge to be cared for by the county or sent back to the Home again. I think this question should be given careful thought by your Board.

It is hoped the Home affairs may be conducted by the veterans who instituted the Home and their successors as they have an interest in the veterans. We employ veterans whenever they are available.

The library has recently been overhauled and improvements of additional metal book racks, tables, chairs, lights, as well as many books added. This makes the library one of the finest in this part of the state. Many daily papers, magazines and reading matter other than books are furnished. We are very proud of our library. Many improvements have been made in the amusement hall and others are being arranged for the coming year. The old billiard tables were exchanged for new ones including racks, cues, balls, etc.

My association and work with the Board of Directors, State Board of Control, State Engineering Department, State Purchasing Department, as well as all state officials has been very pleasant. To the officers of the Home personally, I have only words of thanks for their effort in assisting in the cooperation and conduct of the Veterans' Home of California. We hope the coming year will find us equally as united in the service for veterans of all wars as well as the state.

Respectfully submitted.

R. C. MARTIN,
Colonel-Commandant.

REPORT OF SECRETARY-TREASURER.

VETERANS' HOME, August 21, 1924.

*To the President and Board of Directors,
Veterans' Home of California,*

(Through COLONEL RUSSELL C. MARTIN, *Commandant*.)

GENTLEMEN: I have the honor to submit herewith statement of receipts and disbursements and transactions in this department of the Veterans' Home of California for the seventy-fifth fiscal year, ended June 30, 1924.

Companies E and G barracks.

REPORT OF HOSPITAL.

From: Major J. J. France, Surgeon, Veterans' Home, California.
 To: Colonel R. C. Martin, Commandant, Veterans' Home, California.
 Subject: Annual Report of Hospital for the fiscal year ending June 30, 1924.

The following report is submitted for your approval:

| | |
|--|----------|
| Number of patients in hospital July 1, 1923..... | 143 |
| Number of patients treated during fiscal year 1924..... | 553 |
| Number of patients discharged from hospital during fiscal year 1924..... | 325 |
| Number of patients remaining in hospital at close of fiscal year 1924..... | 142 |
| Number of patients treated at "sick call" (out-patients)..... | 13,168 |
| Number of deaths..... | 69 |
| Average age at death of Civil War veterans..... | 81 years |
| Average age at death of Spanish-American War veterans..... | 57 years |

Reviewing the progress made the last year in the hospital there are several prominent features to be considered. The most conspicuous being the death rate, which was again decreased this year, it being twenty less than the year before, while the number of patients actually treated in the hospital and those attending sick call (or out-patients), have increased. Taking up the separate months we find, that not since 1905 has the record been so low as June, 1924. This is especially gratifying in the face of advancing years and large number of incurable cases that have to be cared for.

Another point worthy of mention is, that for the first time in its history the hospital has been recognized by the College of American Surgeons.

The good results being obtained are due to the ever increasing personal interest taken by the ex-service men and other employees. It is our policy to employ at all times, when possible, ex-service men only. Many of these are doing valuable work, even though their former occupation was different.

The quality and quantity of food on the whole has been up to standard.

The cost of drugs is being kept at a minimum because of the personal supervision by the different department heads, especially in the Dispensary, where the quantity of each prescription has been cut to one-third and repeated as necessary.

I want to thank the Board of Directors, especially the hospital committee, for their loyal support which makes it possible to obtain good results.

J. J. FRANCE.

QUARTERMASTER-COMMISSARY REPORT.

GENERAL SAMUEL W. BACKUS,
President, Board of Directors.

(Through COL. R. C. MARTIN, *Commandant.*)

SIR: I have the honor to submit herewith a report of the quartermaster-commissary for the fiscal year ended June 30, 1924.

The quartermaster's department embraces the commissary, main kitchen, bakery, farm, chicken and hog ranches, dairy, transportation, laundry, clothing, and every feature pertaining thereto.

SUPPLIES.

The contractors furnishing supplies to this institution have all conformed closely to the state specifications with the exception of a very few who attempted to send inferior goods, which goods were at once refused and returned to them at their expense.

Our supplies are purchased by the State Purchasing Department at Sacramento, California, and, after being received at the institution, samples are forwarded to the State Board of Health at Berkeley for analysis, and if not found up to the standard are rejected.

EMPLOYEES.

The departments employ regularly 41 male and 20 female help (40 civilians and 21 members of the Home), total 61. During the season of production a few more men are employed on the farm. The proportion of members to civilian help varies slightly but the general average is about the same. Every effort is made to obtain and keep good employees. Where the service rendered is exceptionally good, and beyond what the employee is supposed to render increase of pay is recommended after six months of employment.

A set of quarters for married employees (6), has been constructed and furnished. They are now occupied, and are very satisfactory.

Employees of the quartermaster's department (farm and transportation) are too often called upon to perform duties other than the regular assignment. While the cooperation is given most heartily, it nevertheless works a detriment to the desired and expected efficiency of the department.

WASTE.

All garbage from the kitchen, dining rooms, and restaurant is sent to the hog ranch, materially reducing the cost of feeding.

Old sacks, scrap iron, rubber or junk of any nature are sold to the junk dealers for the best prices obtainable.

KITCHEN.

The food is well cooked and of a very good variety. Our menu shows a very nicely balanced ration for both the older men and the working men, the tables are supplied daily with fresh vegetables and fresh fruit in season.

The work in the kitchen has been very closely supervised to prevent waste.

FRUITS.

The orchard has furnished an abundance of fresh fruit during the season; also, a splendid yield of prunes, enough being stored to furnish the institution with all prunes needed until the next crop is available, and a large surplus will be sold through the State Purchasing Agent to other state institutions.

FARM.

The feed produced during the year has been especially good, both as to weight and quality.

The soil has been enriched with manure and lime, this being well worked into the ground, and by intensive cultivation the yield has been above the average.

DAIRY.

The herd is in splendid condition. The milk produced during the past year has been of exceptional quality, admitting a good test at all times. Served with butter-fat and cream intact. This insures a perfect table milk.

CHICKEN RANCH.

This department is doing very good work and getting splendid results from the 2519 white leghorns that supply the Home with the necessary eggs and a great many fricassee dinners for the main mess and the Hospital. (2763 chicks on hand.)

The improvements to the fences and buildings that we hope to make this fall and spring will give a great capacity, and the birds will do even better than in the past, by having more and roomier quarters.

During the year 29,736 dozen eggs are consumed. At present writing we have on hand: Hens, 1440; pullets, 1079; chicks, 2763; total 5282.

During the past six months 15,660 dozen eggs were produced, a very creditable showing. Every effort is being made to produce the required amount of eggs needed for consumption as noted (29,736 dozen). A rabbitry has been established; also an initial start in raising turkeys.

HOG RANCH.

This drove has supplied the Home with all of the fresh and salt pork and a great deal of the hams and bacon which is cured and smoked by the butcher department.

VEGETABLE GARDEN.

The Home has been supplied by an abundance of first class vegetables of all varieties.

CLOTHING.

A uniform of exceptional good material (dark blue $\frac{3}{4}$ standard cloth in coat, and sky blue kersey in trousers) has been furnished the members of the Home.

Improvement has been made in the matter of dress (uniform) for the dead. A very fine burial robe, made of blue kersey, uniform pattern, with white collar, is now being furnished.

THE LAUNDRY.

A dry cleaning plant should be installed in connection with laundry, to be used exclusively for uniforms of the men; while the present method of wet scrubbing and dry pressing of uniforms is employed, it could be greatly improved upon through the use of dry cleaning and pressing, conserving the life of the cloth materially. Request for special appropriation to meet the cost of installing a dry cleaning plant is recommended.

TRANSPORTATION.

The rolling stock is in good condition, except the Federal truck, which is in fair condition, but will have to be replaced within the next year. Efforts are now in progress to secure a government truck, and if successful will provide the department with an excellent truck, without the necessity of purchasing a high priced truck. Present truck is now in service for about ten years.

POST STORE.

The post store, under the supervision of the quartermaster, is a profitable adjunct to the Home, besides being a great convenience to members, officers and employees. A careful inventory of stock is taken every month, a complete report of expenditures and receipts made and the profit ascertained. For the twelve months ended June 30, 1924, the cash profit was \$3,362.97.

For kindly consideration and cooperation the thanks of this department are due the Board of Directors, the commandant and other officers, and to a corps of earnest, intelligent employees.

Respectfully submitted.

J. P. EDMUNDS.

VETERANS' HOME OF CALIFORNIA.

Bill of Fare for the Main Dining Room for the Week.

SUNDAY.

- BREAKFAST:** Soft Boiled Eggs, American Fried Potatoes, Graham Muffins, Apple Sauce, Bread, Butter, Coffee.

R. C. MARTIN,

Colonel-Commandant.

ANNUAL REPORT OF ENGINEER'S DEPARTMENT FOR 1923-24.

GENERAL SAMUEL W. BACKUS, *President,*
and the Board of Directors,
Veterans' Home of California.

(Through COLONEL RUSSELL C. MARTIN, *Commandant.*)

GENTLEMEN: I have the honor to present herewith an annual report of the work performed by the various departments under my supervision as well as the work of the State Department of Public Works, Division of Architecture, at this Home, for the fiscal year ended June 30, 1924.

OFFICES AND SHOPS.

Laundry machinery in old laundry has been removed and set up in new laundry and all equipment is now motor driven; all steam and hot water pipes in laundry have been covered with insulation. Frames for bread pans have been made for bakery; new night latch placed in door in new butcher shop; work bench made for carpenter shop; mattress horses for mattress shop; potato masher for quartermaster's department; screened porch at treasurer's office has been overhauled and repaired and new screen cloth put in where needed; platform and hose rack made for laundry; step ladder for dairy barn; six meat boxes for butcher shop; three coffee boxes for commissary department; new flooring laid in barber shop at Company "A" and screen door and window shades placed in same; window shades installed and two laundry trucks made for laundry; tool cabinet made for carpenter shop; window shades installed in telephone office; bulletin boards made for administration building and electric depot; transom at treasurer's office has been frosted; interior of barber shop at Company "A" has been painted; twenty-five flower stakes painted for florist; food carrying tray made for firemen in power house; strainer made for the large milk tank at dairy barn; oil drip can made for ice plant; new awnings erected on west windows of new laundry; twenty feet of galvanized iron gutter made for commissary department; scrubbing table in tailor shop has been covered with galvanized iron; new smoke stack made for the paint shop; two milk buckets for dairy barn; two 3-gallon buckets for bakery; roof safe and smoke stack made and installed at electric depot; three oil drip pans made for use in power house; oven canopy made for bakery; two galvanized iron buckets for engineer's department; ventilator for dairy barn; ventilator and extension made for milk pasteurizing room; two five-gallon square milk cans made for dairy; five-gallon gasoline can and water cooler made for tin shop; soda scoop for laundry; galvanized iron seed cabinet for vegetable garden; funnels made for laundry, tin shop and bakery; ventilator and extension made and installed at new butcher shop; fender and hose basket for chemical hose made for new fire truck; tin record filing case made for bakery; 450-gallon galvanized iron tank made for Home water wagon; thirty-six soup tureens, twenty-four galvanized iron buckets,

twenty-four garbage cans, two 1-gallon milk cans, four dippers, one bread box and three soap and bottle holders made for Quartermaster's department.

BARRACKS AND QUARTERS.

New radiator installed in bathroom at Company "E" barracks; new three-compartment galvanized iron wash tray installed at hospital waitresses quarters replacing old one that was worn out; new smoke stack placed in Home restaurant; Crane trap placed in steam line at Lincoln theater; new diaphragm placed in steam regulator at post store; two-compartment galvanized iron wash tray installed at new quarters for married employees at Company "C;" new slop sink installed at billiard hall; new shelf placed in library; stand for show case made for post store; book case made for library; new screens placed in Lincoln theater; new window shades installed in billiard hall; new inside lock

Main Dining Room.

set placed in door at Company "E;" grating made for bathroom Company "B;" bolts placed on toilet doors Company "E;" platform made for toilet at Company "G;" new shades and window and door screens placed in married employee's quarters; frame made for skylight at post store; new window shade and screen door placed in Company "G;" slop sink made for billiard hall; skylight at post store has been repainted; flag pole painted for Company "C;" bathrooms at Companies "E" and "G" barracks have been painted and enameled; zinc drip pans made for post store; six roof safes and two ventilators made for married employee's quarters; two flush tanks relined for Company "G."

RESIDENCES.

New bowl installed in toilet at Home restaurant; new pipeless heating furnace installed at engineer's residence; new compression bath cocks placed in bath tub at administration building; drain board made for treasurer's residence; stand made for engineer's residence; clothes closet and window sash made for quartermaster's residence; coal box,

drain board and door made and screens placed in skylight at guest house; step ladder made for treasurer's residence; bed frame made for treasurer's clerk's cottage; screen door made and installed at adjutant's residence; two doors made for garage at baker's residence; window shades placed in new addition to chief surgeon's residence; floor, hallway, bathroom, pantry and closet painted and ten trays painted and enameled for guest house; skylight for engineer's residence; sanitary toilet bucket and three radiator drip pans made for commandant's residence; 15-gallon ham boiler made for guest house; two-gallon soup kettle, two 1-gallon milk cans, and one 3-gallon copper kettle made for quartermaster's residence; galvanized iron gutters made for new addition to chief surgeon's residence; dish pan and mould for brown bread made for guest house; double roaster made for quartermaster's residence.

MAIN DINING ROOM AND KITCHEN.

New steam roaster installed in main kitchen; two meat boards and frame for bread cutter made for main dining room; dining tables in main dining room have been painted and enameled and chairs have been cleaned and varnished where needed; dish shelf in dishwashing room relined with galvanized iron; valley gutter made for main dining room roof; iron smoke stack made and placed at main kitchen; twelve galvanized iron dish trays and safeguard for bread cutter made for main dining room; frame for coffee urn and two potato steamers made for main kitchen.

HOSPITAL.

A new electric lighting system has been installed in the hospital and is giving good satisfaction; new electric fan installed in kitchen; heavy iron top placed on kitchen range; covering has been removed from steam mains in blind ward for additional heat; hot water storage tank has been covered with asbestos insulation; hose bibb cut in to water line at blind ward; nine radiator guards made; cover for steam boiler made for kitchen; frames made and canvas fitted for awnings for new band stand and same placed in position; four heavy tin mush boilers; thirty special night buckets; two 3-gallon coffee pots, six tin dippers, twenty-four galvanized iron buckets, one vent hood, six food-carrying buckets with covers, incinerator for Ward 4, one 5-gallon syrup can and one $\frac{1}{2}$ -gallon pressure tank and stand made for hospital.

POWER HOUSE.

Ray automatic burners have been installed under boilers and same are working in a very satisfactory manner and are proving to be a saving in the consumption of fuel oil; a new motor driven air compressor has been installed in power house for the purpose of supplying air for automobiles; the bottom and sides of sump for return water from steam lines has been plastered with a cement plaster to make same watertight and motor has been connected up for the purpose of pumping water from sump to tank in boiler room at Power House.

ICE PLANT.

One hundred sixty-two tons of ice were made and delivered as well as supplying sufficient refrigeration for meat rooms and milk storage room.

CARPENTER SHOP.

Forty-eight burial caskets were made and a supply of casket covers and headboards for cemetery, new work and repairs to buildings, etc., was done as needed.

PAINT SHOP.

Sixty-three headboards were painted and lettered; eighty-one lights of glass were renewed around camp; all burial caskets were stained, varnished and glazed with 10 x 24 glass; all new wooden construction was painted as made and repairs to furniture, etc., made as needed.

STATE WORK.

Chapter 391-21.

Work Order No. 108.

New feeding shed has been erected along side of hay barn in the pasture.

WORK ORDER No. 188.

A wooden flume has been placed above dam in Rector Canyon for an additional water supply.

Work Order No. 474.

The administration and main dining room buildings have been reshingled and roofs of other buildings have been repaired where needed.

Cottage No. 5 at Company "C" has been remodeled into a five-room and bath quarters for married employees and same is now being occupied.

Work Order No. 570.

An addition has been erected on the south side of chief surgeon's residence, upper floor is being used as a sleeping porch and lower floor for cook's quarters with toilet and bath.

CHAPTER 121-23.

Work Order No. 490.

Excavations were made and approximately 12,000 feet of 6-inch double-dipped iron pipe was laid to replace wooden pipe in the Rector Canyon pipe line that had become old and unserviceable. This pipe, with what was previously laid, gives the Home a continuous line of 6-inch iron pipe from a point in the Home grounds at Treasurer's residence to a point about one-third mile out on back road.

Work Order No. 492.

Interior of bakery has been remodeled, ceiling placed, bread mixer moved to a new location, new flour-receiving platform erected, doorway cut for entrance for flour, cement wainscoting placed in side walls, sink placed in new location, glazed skylight placed in roof and all interior has been painted with a washable wall paint.

Roof of head farmer's cottage has been reshingled.

Steps at entrance to Company "A" barracks have been torn out and rebuilt with concrete lower steps, new stepping put in where

needed and pipe rails placed, wooden rails on porches have been removed and replaced with pipe rails and porches repaired where needed.

Old building removed from rear of guard house and remodeled and concrete floor placed in same and is now being used as a garage at treasurer's residence. Ceiling of kitchen at treasurer's residence has been painted.

Track scales installed in butcher shop.

Concrete gutter placed in rear of power house and laundry.

Galvanized iron gutters have been placed at administration building.

Window at south side of main kitchen has been made to swing outward and fly screen placed over same for ventilation purposes.

Work Order No. 508.

Plastering in kitchen and on lower floors of hospital has been

Fire Truck.

repaired where same had become loose and broken; plaster on columns on lower floor has been removed and replaced with cement plaster; porch floor at old Annex building has been renewed; painting at hospital was started but owing to lack of funds this work has been suspended.

Work Order No. 539.

Roofs of administration and main dining room buildings have been given two coats of mineral paint; roofs of Companies "A," "E" and "G" barracks one coat, this work was done with a paint spraying machine. Exteriors of administration building, main dining room building, Companies "A," "E" and "G" barracks have been painted.

Respectfully submitted,

E. C. BOWMAN,
Chief Engineer.

REPORT OF THE ADJUTANT.

VETERANS' HOME, July 1, 1924.

To the President and Board of Directors,
Veterans' Home of California.

(Through COL. RUSSELL C. MARTIN, Commandant.)

Gentlemen: I have the honor to submit herewith statement showing statistics of membership of the Veterans' Home of California together with descriptive list of all members present, and absent, on June 30, 1924, for the fiscal year ended June 30, 1924.

STATISTICS.

| | |
|--|-------|
| Membership of Home June 30, 1923..... | 801 |
| New admissions during the year— | |
| Survivors of the Civil War | 60 |
| Survivors of the Indian Wars | 12 |

LETTER OF TRANSMITTAL.

*To His Excellency, HON. FRIEND WM. RICHARDSON,
Governor of the State of California.*

DEAR SIR: The Board of State Harbor Commissioners herewith submits its biennial report for the fiscal years commencing July 1, 1922, and ending June 30, 1924, with complete statements showing all moneys by them received and disbursed, stating specifically for what the same was received and for what purpose expended; also, a concise account of all improvements made and the general condition of the property under charge of the Commission.

Very respectfully.

CHAS H. SPEAR, *President,*

J. B. SANFORD,

M. F. COCHRANE,

Board of State Harbor Commissioners.

October 30, 1924.

The "Shenandoah" Dipping Easterly Over San Francisco October 20, 1924, on Return Course to the East. Black Dots Above the Dirigible are Army Escorting Airplanes. Southern Pacific Building in Left Foreground.

THE PORT OF SAN FRANCISCO.

Californians have built up in San Francisco Bay the largest and best harbor in the world from revenues in commercial operations without taxation of the public through a period of sixty years, dating from the creation of the Board of State Harbor Commissioners in 1863. The state properties thus accumulated have an appraised value of \$50,000,000 and that valuation is increasing with further development of the harbor.

This great state-owned property, extending from the United States military reservation on the north to the boundary line between San Francisco and San Mateo County, a distance of about ten miles of waterfront, of which about one-half is improved, is in the control of the Board of State Harbor Commissioners, a state business agency of three members appointed by the Governor.

"The Port of San Francisco may be described as the port that has found itself," a noted writer says, "and as such it is unique among the ports of all the world.

"The developments of the waterfront itself, The Embarcadero, the seawall and piers, the Belt Railroad and the seawall lots, could not have been carried out under private or municipal auspices in the manner so beneficial, so efficient, and so economical withal as is now apparent."

The jurisdiction of the Board of State Harbor Commissioners covers all state properties on the waterfront and extends easterly to the pier-head line. The Embarcadero, or waterfront street, is state property and under the control of the Harbor Commission.

Chief Engineer Arnold, in report to the Board in 1873, made the statement that the area of the Bay of San Francisco reckoned to the line of high water, without measuring San Pablo and Suisun bays, is 257 square miles, of which 79 square miles are within the three-fathom contour line and navigable for large sea-going vessels. The anchorage basin proper, within city lines, embraces 59 square miles. He gave the width of the Golden Gate as nine-tenths of a mile and water depth on the bar at low tide, 33 feet. It is significant that at this date, fifty-one years later, the bar conditions are improved, showing no shoaling from river carried silt. The shallowest bar channel today is 37 feet at low water. The north channel is always 54 feet in depth and 2000 feet in width.

Later surveys give the harbor area as 420 square miles, the shore line 350 miles and San Francisco Bay alone, a shore line of 100 miles with a depth of water at pier-head line 40 to 60 feet.

In 1923 the War Department of the United States, acting through the Corps of Engineers in the First California District, and operating under federal authorization for improvement of bar conditions, brought here the great ocean dredge "Culebra," which was used with wonderful success in building the Panama Canal, and started work on the San Francisco bar project. This giant dredge worked here intermittently from January to the latter part of May, 1924, when she was transferred for emergency work in Gray's Harbor, and was returned to San

Fisherman's Cove at North Beach Where 200 Fishermen's Boats Land Every Day.

Francisco in October, 1924, to continue the planned work on the outer bar. Before the "Culebra" was employed on the bar the uniform depth of low water in 1924 was 35 feet.

Colonel Herbert Deakynne, U. S. Corps of Engineers, in charge of the harbor work, is authority for this interesting statement of San Francisco harbor conditions in October, 1924:

The project for the San Francisco Outer Bar provides for a channel following the line of the Main Ship Channel with the Fort Point and Alcatraz lighthouses as the centre line sailing range, 2000 feet wide and 40 feet deep at mean lower low water.

The present project is about 13 per cent completed on this date (October 30, 1924). The total estimated cost of the work including the cost of the dredge, is \$1,000,000. Annual maintenance is estimated at \$100,000. If funds are made available, it is expected to complete the project channel by June 30, 1926. The last survey of the channel was made in May, 1924, when the controlling depth was found to be 37 feet at mean lower low water.

The Bonita, or North Channel, has a controlling depth of 54 feet at mean lower low water and a minimum navigable width at that depth of 730 feet abreast of Centissima Rock. At 40 feet depth there is a minimum width of 2000 feet at Sears Rocks, and a maximum width of about 4000 feet near Tennessee Point.

The improved waterfront assigned to commercial uses is five miles in length. There are 15 miles of berthing space and 5,000,000 feet of cargo area. There is at present berth space for 250 average-size vessels. When commerce demands larger shipping space waterfront development can be extended to 50 miles of piers and bulkhead landings.

There are now in service on the waterfront 15,000 feet of completed seawall, 41 piers, some of them extended during the year, new bulkheads and smaller open wharves rebuilt, 28 seawall lots of land having an area of 5,000,000 square feet and the tract of 25 acres leased to The Atchison, Topeka and Santa Fe Railway Company for its terminal on China Basin. The state also owns 280 acres of submerged lands on Islais Channel, part of it partially reclaimed and in commercial use and another section to be reclaimed immediately for commerce.

The Belt Railroad with trackage of 58.35 miles connecting three transcontinental lines with the piers and more than 100 industrial plants on the waterfront is owned by the state and operated by the Harbor Commission to the satisfaction of all shipping and industrial interests.

The Harbor Improvement Fund is a separate fund in the State Treasury, into which all moneys received by the Board of State Harbor Commissioners are paid and from which costs of operations and improvements, interest and bond redemptions are paid. Monthly statements of harbor receipts of every nature are made to the State Treasurer and the moneys are transmitted to the Treasurer at the end of each month. Moneys received from sales of bonds are maintained in separate funds.

Complete statements of all transactions of the Board are included in the financial report herein, to which reference is made for particulars. It will be seen therein that the total receipts of the Board of State Harbor Commissioners for the fiscal year June 30, 1923, to July 1, 1924, were \$2,786,512.11. The expenditures were \$1,168,283.46, the surplus for the year being \$1,618,228.65. Receipts for 1923 were \$2,687,895.99 and for 1924, \$2,786,512.11. The gain in operative revenue in 1924 was \$98,616.12.

Islais Grain Terminal, Five Stories in Height and Having Capacity for Handling 600 Tons of Grain Daily, the Business Paying \$25,000 Annually to the State.

REPORT OF BOARD OF STATE HARBOR COMMISSIONERS.

The biennial report of the Board of State Harbor Commissioners for 1923-24 covers the administration of two boards, changes having been made at the close of the first fiscal year of the biennium. The present Board of State Harbor Commissioners consists of the following named Commissioners: Chas. H. Spear, appointed vice John H. McCallum, May 21, 1923, and elected president May 24, 1923; J. B. Sanford, appointed May 24, 1923, vice F. S. Moody, resigned; M. F. Cochrane, appointed August 1, 1923, vice Harry H. Cosgriff, resigned.

Outstanding achievements of the new Board of State Harbor Commissioners in 1923 and 1924 were construction of the only vehicular subway on the Pacific coast to relieve congestion of the great passenger traffic through the Ferry Building; completing erection and starting successful operation of the Islais Creek grain terminal; rebuilding The Embarcadero with up-to-date, smooth pavement; reconstruction work on the Belt Railroad; extending piers; making extensive repairs throughout the waterfront; renovations and remodeling in the Ferry Building to make it the most attractive single depot in the United States; ordering construction of modern piers at a cost of about \$2,000,000, and successfully managing a commercial shipping business that has outgrown the port.

The Board has made a record for economy and efficiency in its management of the port, meeting requirements of growing commerce so far as pier accommodations now provide and giving service to shipping interests handling larger business than in any other year in history. In the state budget, carefully prepared for the first year of Governor Friend Wm. Richardson's administration, an estimate of \$1,626,982.88 was made for expenditures by the Board of State Harbor Commissioners for salaries and support. The Board's financial statement for the period shows that these expenditures amounted to \$1,405,608.58, leaving a balance of \$221,374.30 remaining June 30, 1924.

NO COST TO TAXPAYERS.

This biennial report covers in general the operations of the former board and gives in detail the accomplishments of the succeeding board during the second year of the biennium. It was shown in the biennial report 1920-22 that the control of the port had been profitable, in keeping with the record made through the past sixty years, with a substantial increase credited to the state management and adding large values to the tangible assets of the harbor, now appraised at \$50,000,000, of which taxpayers have not been asked to pay one dollar. It was stated in the 1920-22 biennial report that the surplus revenue above operating expense, cost of repairs and replacements, interest and sinking fund on bonds, etc., was \$665,782.07 for the fiscal year ending June 30, 1921, and \$580,818.03 for the year ending June 30, 1922, a total of \$1,246,600.10 for the biennium.

In the financial statement for the two fiscal years ending, June 30, 1923, and June 30, 1924, presented in this report, it is shown that a surplus over fixed operating charges remains from operations for the year ended June 30, 1924, in amount \$1,044,707.39 as compared with the year ended June 30, 1923, of \$867,562.37, a gain of \$177,145.02 in the fiscal year and an increase of \$463,889.36 over the preceding year ending June 30, 1922. In the three fiscal years the increase in surplus revenues amounted to \$2,493,087.79. All of this surplus money goes back into extraordinary maintenance and capital improvements.

All sources of revenue during the fiscal year 1923-24 just passed, show increases while operating expenses decreased \$38,349 as compared with expenses for the previous year. There was expended during the last fiscal year \$869,039.09 for new property and equipment, the values to be added to the tangible assets of the state. Of this amount \$430,396.88 was expended from revenue earned, and \$438,642.21 was taken from the Third San Francisco Seawall Fund.

Throughout the extensive harbor properties of the state under management of the State Board of Harbor Commissioners there was found need for many repairs and replacements along the waterfront. Early inspection directed by the Board in June, 1923, disclosed considerable decay in timber and disintegration in exposed materials. Piers were noticeably weakening by dry rot and building exteriors were weather worn. The handsome Ferry Building, resting on a concrete foundation supported by 5000 piles, showed less settlement than private properties on reclaimed ground, but it had not been properly taken care of, experts found. The facings had not been painted for several years and the appearance was not creditable to the state. Plans were immediately made for resurfacing the California stone front of the building, for repainting the interior and for laying marble flooring in the waiting rooms of the railroad systems housed in the great stone depot. During the year these improvements were made at a cost of \$63,760, of which new marble flooring in the waiting rooms cost \$31,000. California white marble from quarries in Tuolumne County was laid in rich concrete resting on ancient dark concrete floors and the whole interior was repainted white, completely changing the depot from a dark, depressing color to a pure white interior and making the waiting rooms inviting places in soft, restful lighting effect. The transformation was delightful to the fifty millions of passengers who passed through the Ferry Building in 1924, and most creditable to the Harbor Commissioners, pleased East Bay commuters declared.

REPAIRS AND REBUILDING NECESSARY.

Following a carefully planned program for making necessary repairs and rebuilding, the Board had surveys made of all substructures and superstructures along the waterfront. Expert heads of pile driving and wharf construction and general repairs reported, after personal inspection of conditions, that \$235,000 would be required to bring the properties up to first-class condition. This report was approved by the chief engineer who held that the appraisal was fair for the work but no estimate could be made of probable defects to be found in making the repairs contemplated, as experience in two instances had increased such estimated costs seventy-five per cent. Dry rot in timber supports was

found in all directions, and the experts reported that the waterfront was full of it, caused largely by bad construction. All this had to be replaced and the Board's employees were instructed to do all work in first-class manner to make repairs as near permanent as possible. As the repair work progressed, big timbers were found rotten in many sections. The cost of repairs in that direction during the first year of this Board's administration and the maintenance costs for the current fiscal year, totaled \$500,584.73. Repairs and maintenance charges for the year ended June 30, 1923, were \$521,267.57, an outlay \$20,682.84 in excess of the reconstruction and repair charges made necessary in 1924 as far as the work could be carried along to the end of the fiscal year. Costs of building and equipping another piledriver, now under contract, as an emergency addition will be an expense chargeable in the next fiscal year.

IMPROVEMENTS CALLED FOR BOND MONEY.

This Board expended during the fiscal year just closed \$430,000 for wharf extensions and other necessary building improvements from surplus revenues available, but larger betterments could not be provided for unless bonds could be sold. There was available in the authorized state bond issue of 1913, a balance of \$7,000,000, and Governor Richardson assented to the Board's recommendation to sell \$2,000,000 of the reserved bond issue, which will be used to build new piers and reclaim a large section of waterfront land on the southern extension of the waterfront along Islais Creek where the state owns 280 acres of submerged lands which will in time be used for commercial activities. The future growth of the waterfront must necessarily be along Islais Channel and it is planned to extend the seawall in that section, when funds are available for that protection and filling in the low lands.

From the \$2,000,000 bond money \$500,000 is allotted for the construction of a two-story warehouse at Third and Channel streets on the China Basin frontage, where a concrete foundation for the great structure was laid in 1923 at a cost of \$950,000. This warehouse will be approximately 100 feet wide by 800 feet long and will be used as transit sheds with 190,000 square feet of area.

MODERN PIER PLANS.

Pier No. 50 will be built with frontage on China Basin and \$1,000,000 of the bond money is to be used in that necessary improvement. The Atchison, Topeka and Santa Fe Railway has a freight terminal here and the new pier has been designed for the immense traffic that will be developed at that meeting point of rail and steamship. The new pier will be 670 feet long and 386 feet wide. It will have seven railroad tracks connected with the state's Belt Railroad system. Double rail tracks will be laid on either side of the pier and three tracks will be run down the center depressed section. The track depression will make it possible for trucks to be moved out to the end of the pier in loading and discharging, avoiding congestion in the service when two or more ships are berthed at one time. This will be a modern pier in every particular, a marked advance in harbor improvements when contrasted with the handicaps in handling cargoes on old-fashioned narrow piers which latter-day commerce quickly blocks and causes costly delays to

Grain in Islais Terminal to be Cleaned for Export.

shippers and consignees. The Harbor Board has hurried along this necessary betterment and hopes to have the construction well started in the opening of the new year.

Extension of the rock and concrete seawall southward on the line of Islais waterfront will be a most important project to be financed with the remaining \$500,000 of bond money soon available.

EXTENDING WATERFRONT SOUTHWARD.

The Board has planned to reclaim and develop the Islais submerged area of 280 acres in three solid filled units, each 1000 feet wide by from 1600 to 3000 feet long, with deep navigable channels 400 feet in depth between the several sections, opening an immense harbor area there and providing for commercial expansion.

It is planned to completely reclaim now one unit of the extensive project, about fifty acres in area. As shipping business develops, the general reclamation scheme will be followed and funds for the extension will be available from the remaining \$5,000,000 bond issue authorized in 1913. This development project is recognized in business circles as the most important advancement of the future for, as the port needs further pier extension, the entire southern waterfront area will be improved in like fashion.

The first unit of this extensive harbor area has been reclaimed in part for a length of 800 feet and the seawall is to be extended on its navigable front. In this partial reclamation dredged material from Islais Creek, where a navigation depth of 35 feet is maintained, was deposited inland making a foundation within the seawall line for commercial plants, leaving the seawall extension for a later time, and that work is to be continued in the present development. Dredgings had theretofore been carried on scows to dumping depths in the bay and at considerable expense.

GRAIN TERMINAL A SUCCESS.

On this reclaimed Islais fill a large grain terminal has been built and was in successful operation during the California crop season of 1924, meeting a shipping demand for encouragement in marketing grain. Completion of this commercial addition to harbor developments was one of the early projects of the new Harbor Commission as an aid to California farmers in the season of 1924. Funds for the enterprise were available from the harbor revenue surplus. The business was well started and is being successfully handled by a tenant company, the Islais Creek Grain Terminal Corporation, composed of men prominent in the shipping community. The terminal has a grain cleaning capacity of 600 tons daily and has a handling capacity of 200,000 tons of export barley yearly, providing a foreign market for a long neglected grain-producing industry. The state investment in this property, aside from the land values was \$224,337.64. The net revenue to the state from the grain terminal lease and tolls for the year July 1, 1923, to June 30, 1924, was \$12,459.02, which is $5\frac{1}{2}$ per cent return on the investment. It is estimated that the revenue from this industry will approximate \$25,000 yearly.

In addition to the profits accruing to the state, the improvements in the Islais commercial area have relieved tonnage congestion in the

Looking into Southern Entrance to the Subway at Mission Street. Note the Viaduct Over The Embarcadero from Ferry Building to West Sidewalk, Which Was Built in 1918 and Cost \$47,446.53.

central shipping section. Other growing activities in industrial plants on the reclaimed Islais lands are rice mills, oil refineries and lumber yards.

SUBWAY AT MARKET STREET CROSSING.

Assuming management of the state's fast growing business on the San Francisco waterfront in July, 1923, the new Board of State Harbor Commissioners announced its purpose to build a vehicular subway under the ferry street car loop to divert such travel from the Market street crossing on The Embarcadero and make the thoroughfare safe for many thousands of pedestrians. Plans for the necessary improvements were adopted September 6, 1923, and work started in December. President Chas. H. Spear conferred with city and street railroad authorities on financing the project, with the result that the cost of the construction will be borne one-half by the state, one-quarter by the city of San Francisco and one-eighth by each of two city railways. The construction by contract will be completed about the close of the year. The full cost will be about \$350,000.

The subway is a reinforced concrete structure 986 feet in length covering a distance of four blocks with a closed section 390 feet long, having a roof of steel and concrete supporting the pavement and street car tracks. Open end approaches are 298 feet in length each and have a grade of $3\frac{3}{4}$ per cent. The subway section is 23 feet between side walls, 21 feet 8 inches between curbs and has clearance height of 13 feet for the two roadways. The subway floor of reinforced concrete is 5 feet thick, and the sidewalls reinforced concrete $2\frac{1}{2}$ feet thick, the whole being thoroughly waterproofed, for high tide rises to within 6 feet of the surface at that point of the waterfront, the ground being water-bearing.

Planning for the construction of the subway, the engineers of the Commission bored down into what appeared to be an ancient waterfront bulkhead wharf, causing a renewal of interest in the early history of the waterfront. Old timers watched the borings along The Embarcadero and recalled the placing of the piles and heavy timbers along the Market street front during the late eighties. The old platform was found at a depth of twelve feet below street level, and the timbers appeared to be as sound as when they were placed there over a generation ago.

According to the engineers, this structure constituted what is known as a timber relieving platform. The original seawall cut diagonally across The Embarcadero about 180 feet inside of what now constitutes the front of the Ferry Building. About 1889, previous to constructing the Ferry Building, a new concrete seawall was constructed on the front line of the proposed building. The space between this new concrete wall and the old rock seawall was heavily piled on rows at 5 feet and 6 feet centers, filled with sand and decked over at the elevation of low tide. On top of this platform was placed about 12 feet of sand fill carrying the street between the old seawall and the new seawall in front of the Ferry Building. The foundations for the building were then constructed on concrete piers so that the building itself is actually supported on a heavy concrete wharf. The new subway cuts through the ancient relieving platform just east of the original seawall. The engineers expected to remove the timber deck and utilize the original piling

Construction Scene in Subway with Concrete Flooring Being Laid Before Building Side Walls.

for supporting the concrete base of the subway. They reasoned that if the piles supported twelve feet of earth and all the car and team traffic for the past generation, they ought to be adequate to support the new roadway with most of the fill removed. But if any of the piles were not found in their expected locations or if they appeared inadequate when bared again to inspection, provision was made in the contract for adding additional piling. Much of the ancient piling was found sound and it was retained in the foundation work.

FINANCIAL REPORT OF THE 74th AND 75th FISCAL YEARS ENDED JUNE 30, 1923, AND JUNE 30, 1924.

TEXT.

Account 1.—Comparative Statement of Financial Status, as of June 30, 1924, and June 30, 1923.

Schedule No. 1. Fort Mason Tunnel Account.

Schedule No. 2. Analysis of Property and Equipment, showing comparative values of Real Estate, Piers and Wharves, Buildings, Equipment, etc.

Account 2.—Comparative Statement of Revenue and Expense for the Fiscal Years ended June 30, 1924, and June 30, 1923.

Schedule No. 1. Comparative Statement of Operating Revenue and Expense.

Schedule No. 2. Analysis of Revenue from Operations.

Schedule No. 3. Analysis of Expense of Operations.

Schedule No. 4. Comparative Statement of Revenue and Expense of the Belt Railroad, as of June 30, 1924, and June 30, 1923.

Account 1.—In the form of a balance sheet, exhibits the financial status of the Board of State Harbor Commissioners, as of June 30, 1924.

Schedule No. 1. Of this Account, Fort Mason Tunnel Account, shows that there has been realized toward the payment of the cost of the tunnel, between the date of acceptance, October 22, 1914, and June 30, 1924, the sum of \$87,789.07, of which \$449.51 was realized during the year ended June 30, 1924. A comparison between this amount and the figures of previous years shows that the decrease in revenue of the tunnel has dropped to such a degree that the balance of \$185,360.31 will be increased in future years instead of being reduced, because the interest charges as allowed by the United States government—5 per cent yearly on the balance—in several months, during the past year, exceed the credits accruing toward payment of the original cost.

Schedule No. 2. Is an analysis of property and equipment under the jurisdiction of the Board of State Harbor Commissioners, as of June 30, 1924, as compared with June 30, 1923, showing the values of Piers, Wharves, Real Estate Purchased, Buildings and Equipment, etc., in a sum total of \$25,047,646.43, as of June 30, 1924.

These figures show the actual cost to the Board to construct or purchase and do not include the value of lands upon which structures are situated, with the exception of the lands at Islais Creek and India Basin.

The appraised value of seawall lots is \$5,530,743.50 and the fifty acres in China Basin and Central Basin are appraised at \$1,900,000, which amounts do not appear in the inventory.

Account 2.—Exhibits in comparative form the Revenues earned and the offsetting Expense and reflects a surplus from operations for the year ended June 30, 1924, of \$1,044,707.39, as compared with the year ended June 30, 1923, of \$867,562.37.

All sources of Revenue during the year just passed show decided increases over the year previous, particularly in Rents, Dockage and Tolls, while at the same time operating expenses show a decrease of \$38,349.00 for the past year, as compared with the operating expenses of the previous year.

Schedule No. 1. Of Account 2, shows in comparative form the operating Revenue and Expense by particular location.

Schedule No. 2. Of Account 2, is an analysis of Revenue from Operation and details of Revenue from various sources, as well as by location or function.

Schedule No. 3. Of Account 2. Analysis of Expense of Operation, details by location, the operation expense and repair costs.

Schedule No. 4. Of Account 2, is a comparative statement of Revenue and Expense of the Belt Railroad for the year ended June 30, 1924, as compared with the year ended June 30, 1923. It will be of interest

Subway Construction Scene Looking South from Market Street, Street Car Service Being Uninterrupted.

to note that the Revenue from switching and incidentals thereto was \$1,383.59 *less* during the year just passed as compared with the Switching Revenue of the previous year. In spite of this fact, however, the net operating revenue for last year *exceeds* that of the previous year by \$18,437.20, due to the decided decrease in operating expense, which brought up the net revenue per car to \$.870 as compared with the net revenue per car the previous year of \$.728.

Your attention is also invited to the fact that the Revenue for Track Storage the past year was \$4,713 as compared with \$8,331.50 the previous year, a decrease of \$3,618.50. This accounts greatly for the decrease in the total Revenue of the past year.

Exhibit A.—Of this report is a detail of property acquired during the period, showing an expenditure of \$869,039.09 for new property and equipment. Of this amount \$430,396.88 was expended from revenue earned and \$438,642.21 was expended from the Third San Francisco Seawall Fund.

FORT MASON TUNNEL ACCOUNT—ACCOUNT 1. SCHEDULE 1.

Analysis of account showing liquidation to June 30, 1924, of the cost of that section of the Fort Mason Tunnel within the confines of the Fort Mason Military Reservation, in accordance with the agreement between the Board of State Harbor Commissioners and the United States Government.

EXCERPTS FROM AGREEMENT REFERRED TO:

SECTION 3. "That all freight of the United States, or freight originating or incident to any portion of the region to the east or west of Fort Mason passing through the tunnel shall pay, in addition to an equitable track and switching charge, a tunnel charge of \$10.00 per car."

SEC. 5. "All tunnel charges shall be applied toward paying the cost of the work * * * including interest at 5 per cent per annum, and as soon as that sum has been paid said charges will cease and thereafter there shall be no further tunnel charges. If unforeseen or unusual conditions or accidents shall at any time make a further charge necessary or equitable it shall be governed by additional regulations of the Secretary of War."

| | Cost | Interest charges | Tunnel toll credits | Balance |

REPORT OF CHIEF WHARFINGER.

To the Board of State Harbor Commissioners.

GENTLEMEN: I herewith submit to your honorable Board a few new facts for your consideration:

The Wharfinger's Department is responsible for the collection of moneys through tolls, dockage and wharf demurrage over five and one-half ($5\frac{1}{2}$) miles of waterfront. It is a most important department in that it not only collects the moneys but controls and is responsible for the correct movement of cargoes and vessels in coastwise, inland waterway, foreign and intercoastal trade. In order to do this systematically and in a business-like manner, we have inaugurated a system of reports which are made to the Chief Wharfinger, thus enabling his office to keep in constant touch with these operations: That is, in the first place, we keep a strict account of the free-time period and moneys due from demurrage on cargoes loaded or discharged on the different piers and, in the second place, we keep a strict account of the collection of dockage and tolls, and enforce a strict adherence to making formal application for pier assignments. At the present time, we are averaging about 3000 operations per month.

When I first became head of this department in May, 1921, the fiscal year ended in June, 1921, one month later. I desire to show by comparison, taking as a basis our greatest source of revenue—the harbor rents—how the Wharfinger's Department has made substantial gains in revenue from the seventy-third fiscal year to and including the seventy-fifth fiscal year.

Seventy-third Fiscal Year—July 1, 1921, to June 30, 1922.

| | |
|---------------------------------------|----------------|
| Greatest revenue— | |
| Harbor rent | \$1,157,395 49 |
| Revenue wharfinger's department | 887,548 18 |
| Difference for comparison | \$269,847 31 |

Seventy-fourth Fiscal Year—July 1, 1922, to June 30, 1923.

| | |
|---------------------------------------|----------------|
| Harbor rent | \$1,147,032 57 |
| Revenue wharfinger's department | 1,057,993 93 |
| Difference for comparison | \$89,038 64 |

Seventy-fifth Fiscal Year—July 1, 1923, to June 30, 1924.

| | |
|---------------------------------------|----------------|
| Harbor rent | \$1,198,303 86 |
| Revenue wharfinger's department | 1,133,894 62 |
| Difference for comparison | \$64,409 24 |

By this report, it is clearly shown that this department is advancing in revenue near the total collection of the rents along the waterfront, including the Ferry Building, the difference as shown in the seventy-fifth fiscal year being \$64,409.24 as against \$269,847.31 in 1921 to 1922, or the seventy-third fiscal year.

| | |
|--|----------------|
| Total earnings, 1923-1924 | \$2,761,080 95 |
| Total earnings, 1921-1922 | 2,392,702 20 |
| Increase | \$368,378 75 |
| Wharfinger's department for same period, 1923-1924 | \$1,133,894 62 |
| Wharfinger's department for same period, 1921-1922 | 887,548 13 |
| Increase | \$246,346 49 |

Of the total increase in the total earnings for the periods above mentioned (1921 to 1924), namely \$368,378.75, the Wharfinger's Department is responsible for \$246,346.49 of same.

There have been several very important changes embodied in the new tariff which will work to a great advantage for the waterfront patrons as a whole and will help to a very great degree the physical conditions at the peak of seasons when cargo offerings are handled in such quantities.

Our tonnage is growing in a substantial manner; for example, during my time as Chief Wharfinger:

| | |
|-----------------------|------------|
| July, 1921—June, 1922 | 8,193,435 |
| July, 1922—June, 1923 | 10,087,936 |
| July, 1923—June, 1924 | 10,607,309 |

Certain commodities which comprise this tonnage require more pier space than others. Certain foreign cargoes can be piled to a great extent while intercoastal cargoes can not and require three times as much pier space. As a result, with the ever-increasing business, we are in great need of new construction to provide for it. This Board of State Harbor Commissioners has seen the necessity of a building program and has already started to relieve a grave situation. As this condition has been realized, the port will forge ahead with healthy strides and all customers of the port will be accommodated with available facilities adequate for what may come.

Speaking of piers, it might be well to give a review of how many there are and to what use they are being put. Before starting the detail, it may be well to add that all piers on the waterfront of San Francisco are assigned to steamship companies excepting three-fourths of Pier 41.

There are 37 steamship companies in foreign trade operating 256 steamers. There are 13 steamship companies in the intercoastal trade operating 125 steamers, making a total of 381 steamers.

There are nine companies of the above list which are without permanent assignment, and operate 39 steamers.

Piers Along the Waterfront Harbor of San Francisco.

| Total Piers—40. | |
|---------------------------|--------------------------------------|
| Intercoastal and foreign— | Pier 14—U. S. Navy. |
| 46-44-42-40-36-34-30 | Pier 15—Coal Bunkers. |
| 32-28-26-22-11-21-25 | Pier 27—Potato Dealers (6). |
| 29-31-33-35-37-39-41 (21) | Pier 43—Standard Oil. |
| Inland waterway— | Pier 54—Associated Terminals. |
| 1-3-5-9-19-23 (6) | Pier—Sixteenth Street, Lumber Docks. |
| Coastwise— | China Basin, Lumber Docks, Hay. |
| 38-24-20-16-18-7-17 (7) | Islais Creek, Lumber Docks, Grain. |

In conclusion, it gives me great pleasure to be able to reflect the sentiments and purposes of the present Board of State Harbor Commissioners and also to be instrumental in putting into effect a policy which will be beneficial both to large operators as well as to the small ones. It is a policy which will hasten to develop a more universal cooperative spirit which we so earnestly desire to have exist along the harbor front of San Francisco at all times.

Respectfully submitted.

FRED S. KNIGHT,
Chief Wharfinger.

October 15, 1924.

TARIFF CHARGES OF THE BOARD OF STATE HARBOR COMMISSIONERS.

Charges for dockage, tolls, demurrage and rentals for use of state piers, wharves and bulkheads and rules and regulations for operation of the departments of the Board of State Harbor Commissioners are fully shown in the Tariff, a publication which can be obtained at the office of the board. The charges are briefly shown in the following statement:

Coastwise trade is defined as trade along the Pacific Coast of the United States between Mexico and the Canadian border inland waterway as trade or service between San Francisco and points located upon the bays, rivers and other inland waters of California; foreign and off-shore as all trans-Pacific trade and Atlantic seaboard trade.

| | Definition | Rate | |
|--------------------------|---|--|---|
| | | Foreign | Coastwise, etc. |
| Dockage: | *Charge assessed against vessel berthing at own assignment... | None. | 2 cents per ton first 200 net registered tonnage; $\frac{3}{4}$ cent each additional ton. |
| | At outside berths..... | Full rate. | |
| Tolls: | **Charge for cargo loaded or discharged on state wharves or in slips..... | 15 cents general. | 5 cents general. |
| Wharf demurrage: | ***Charge for cargo delayed on state premises | 25 cents ton first five days. 50 cents ton each succeeding five days. | 25 cents ton first five days. 50 cents ton each succeeding five days. |
| Belt Railroad switching: | Charge for switching loaded freight cars between any two points on the tracks of the Belt Railroad..... | \$3.50 per car. | \$3.50 per car. |

Rental charges will be assessed against steamship companies having sufficient business to require definite assignment of pier space on the basis of \$.012 coastwise or inland waterway; \$.006 foreign.

*Vessels engaged in foreign trade are not charged dockage at their own assignment. They are required, however, to load or discharge 500 tons per day, etc., in violation of which a penalty will be assessed against the vessel. If at outside berth full rate dockage is charged.

**No tolls will be charged shipper or consignee on import and export traffic moving through the Port of San Francisco on through bills of lading when originating at or destined to Japan, China, Philippine Islands, India, Australia, New Zealand, Fiji Islands or beyond, and when destined to or originating at points in the United States east of Ogden, Salt Lake City and Garfield, Utah; Albuquerque, Belen or Deming, New Mexico; and El Paso, Texas. Such tolls will be absorbed by rail and ocean carriers as shown by Supplement No. 11, Trans-Continental Freight Bureau Westbound Export Tariff No. 29-I, effective April 20, 1922, and Supplement No. 8, Trans-Continental Freight Bureau Eastbound Import Tariff No. 30-H, effective April 20, 1922.

***Foreign cargo must be removed from the wharf within seven days after discharge of vessel; coastwise cargo within five days after discharge of vessel; thereafter penalties as shown accrue. Coastwise cargo may be assembled five days before arrival of vessel; foreign cargo may be assembled seven days before arrival of vessel.

REPORT OF THE SUPERINTENDENT OF THE BELT RAILROAD.

To the Board of State Harbor Commissioners.

GENTLEMEN: I herewith submit biennial report of the operation of the Belt Railroad for the fiscal period beginning July 1, 1922, and ending June 30, 1924.

OPERATION.

The Belt Railroad maintains a twenty-four-hour switching service, except on Sundays and legal holidays, when there is no service between 8 a.m. and midnight, with a provision in the tariff, however, for special engine service on these days, upon payment of the additional cost.

During this biennial period the demands upon the Belt Railroad for service have been increasingly greater, as an inspection of the comparative statement of revenue and expense, printed elsewhere in this report, will indicate. It has been necessary to work additional crews in order to care for this increased business, but by the exercise of strict economy it has been possible to do this and yet effect a saving in the total expense of the road as between the years 1923 and 1924, of nearly twenty thousand dollars. The number of earloads handled in this biennial period was 227,056, the month of October, 1923, being exceptionally high, with 14,368 earloads.

Additional revenue has been derived from the use of the Belt Railroad box cars furnished to shippers on a flat rental basis. The amount received from this source for the two fiscal years is \$11,930, representing some 2386 rentals. Another source of revenue is the Belt Railroad crane which is rented to anyone desiring the services of a fifteen-ton capacity locomotive crane. The tariff rate for this service is \$7.50 per hour, with a minimum charge of \$22.50. The amount received during the two fiscal years is \$9,173.25. The amounts received from miscellaneous sources, other than boxcar and crane rentals is detailed in the comparative statement above referred to.

MAINTENANCE.

Cost of track maintenance and maintenance of the mechanical equipment has been kept at the minimum consistent with good operation and safety. During the biennium it has been necessary to renew numbers of switches and frogs in the tracks, 60 new switches being placed at a cost of \$27,549 for material and 22 new frogs placed at a cost of \$5,492 for material. Much of the track material now in place has been in use for a number of years and consequently is increasingly hard to maintain, requiring frequent renewals and replacements.

CONSTRUCTION.

The reconstruction referred to in the previous report to the Board was completed in 1922 and has been in continuous operation since that time. While this greatly facilitated the movement of trains and the switching to piers and industries, we find ourselves cramped for storage

and yard room with the business we get during the busy season, ranging from July to November. The total mileage, including the tracks at Islais Creek and China Basin, operated by the Southern Pacific Company and Santa Fe, under joint agreement, is now 58.35 miles.

A number of new tracks were built at the site of the China Basin Terminal, connecting this proposed facility with the Belt Railroad. This work was done at a cost of \$15,019.19, and until the completion of the warehouse, the trackage can be used for ship spurs.

In order to conform to plans which have been proposed by the municipal authorities for widening and beautifying the Marina boulevard, a portion of the track on the Marina running to the Presidio will be shifted from one side of the road to the other, and this work will be undertaken in the near future.

RECOMMENDATIONS.

The storage and yard room should be increased by the construction of additional tracks. I have previously recommended that The Embarcadero between Mason and Taylor streets be closed and this space filled with tracks for storage of cars, including the extension of tracks known as Ferry 9, 10 and 11. Additional trackage should also be provided on the south side of Market street for storage of cars.

I also recommend that locomotives Nos. 4 and 5 be sold and that order be placed for two additional locomotives of larger type, delivery of one to be made immediately and the other during the coming year. The engines to be disposed of were built in 1911 and 1912, and are in good mechanical condition, but too light for the work we are compelled to perform. With the increased size of boxcars, and the capacity loading insisted upon by the carriers, heavier engines are needed to do the switching on the Belt Railroad.

Respectfully submitted.

T. J. MCGINTY.
Superintendent.

REPORT OF CHIEF ENGINEER.

*To the Board of State Harbor Commissioners,
San Francisco, California.*

GENTLEMEN: I beg to submit herewith for your consideration my report as Chief Engineer of the Board of State Harbor Commissioners, for the two fiscal years beginning July 1, 1922, and ending June 30, 1924.

At the time of the presentation of the last biennial report on July 1, 1922, there were under construction the following structures:

Bulkhead Wharf, Piers 19 and 21 to 25, which was 97 per cent completed.

China Basin Terminal substructure, which was 15 per cent completed.

The bulkhead wharf was completed in July, 1922, at a cost of \$107,896.23 and the China Basin Terminal substructure was completed in January, 1923, the total cost being \$1,039,107.19.

For the purposes of this report the work of the Engineering Department will be divided as follows:

1. Pier extensions and buildings.
2. Embarcadero subway.
3. Maintenance and repairs.
4. Paving.
5. Electrical.
6. Dredging.
7. Testing.
8. Designing and drafting.
9. Recommendations.

1. PIER EXTENSIONS AND BUILDINGS.

Pier 22, Extension.

Pier 22, which was 400 feet in length and 127 feet in width, was extended into the bay a distance of 323 feet. The extension was not carried to the pierhead line on account of conditions at the site, namely, extremely deep water and a very soft mud bottom. The structure is of creosoted pile and timber construction with a timber frame shed. The cost of the extension was \$148,735.98 and it was completed in April, 1923.

Pier 42, Extension.

Pier 42 was extended to the old pierhead line, a distance of 148 feet, the width being 145 feet. The extension was of creosoted pile and timber construction with a timber shed and one depressed railroad track. The cost of the structure was \$69,647.50, and it was completed in October, 1923.

Pier 44, Extension.

Pier 44 was extended to the old pierhead line, the extension having a length of 149 feet and a width of 145.5 feet. The substructure is of creosoted pile and timber construction with one depressed railroad track on the south side. The shed is a two-story structure of timber with steel girders carrying the second floor. In conjunction with the extension two passenger aprons and sixteen additional freight aprons were constructed for the purpose of landing cargo and passengers on the second floor. The cost of the extension was \$89,722.49, and it was completed in April, 1923.

Islais Grain Terminal.

Following the decline in the vegetable oil trade through this port it was decided to convert the oil terminal at Islais Creek into an export grain terminal. The grain which is exported from San Francisco, consisting principally of barley, is all handled in sacks. A considerable proportion, however, requires reconditioning and this necessitated the construction of a plant for cleaning and grading and bins for storage and resacking. The buildings are timber-frame structures covered with corrugated galvanized iron. The five-story grader building is 58 feet by 62 feet and houses the cleaning, grading and elevating machinery, which was furnished and installed by the Islais Creek Grain Terminal Corporation, the operators of the terminal. The storage bins are 21 by 79 feet and the resacking bins 18 by 46 feet. The warehouse for the temporary storage of sacked grain has an area of 140,000 square feet.

Layout of Proposed Piers Nos. 48, 50 and 52 South of Channel Street.

It is a one-story structure except for a section 62 feet by 158 feet adjacent to the grader building, where a second story was constructed for the handling of screenings.

The existing wharf along the Islais Creek channel in front of the terminal, an old timber structure, was entirely rebuilt, using creosoted materials. This wharf is 70 by 788 feet and carries one depressed railroad track. An extension at the easterly end was also constructed of creosoted materials, the dimensions being 48 by 503 feet. In order to expedite the receipt of grain by rail, a depressed railroad track 785 feet in length was constructed at the rear of the terminal.

Several separate contracts covered the construction of the grain terminal. On June 30, 1924, the facilities outlined had been completed with the exception of the reconstruction of the old wharf, which was under construction, and the portion of the building extending over the wharf. The entire cost of the improvements aggregates \$294,370.

Pier 34, Addition.

Pier 34 was originally constructed with one surface railroad track in the center of the pier shed. This arrangement was found to be very unsatisfactory due principally to the congestion in the relatively narrow building. The center track was therefore removed and a depressed track was constructed along the south side of the pier. The construction was of creosoted piles and timber with a section of reinforced concrete across the existing bulkhead wharf. The cost of the addition was \$52,831.79 and it was completed in March, 1924.

Pier 36, Car Ferry Apron.

From the time of its construction difficulty was experienced in operating the car ferry slip at Pier 36 at low stages of the tide. In order to overcome this difficulty it was decided to lower the hinge end of the apron and a section of the deck of the pier 25 feet in width, 150 feet in length and weighing 375 tons. This necessitated supporting the structural steel and reinforced concrete deck on needle beams and jacks, cutting down the concrete cylinder supports, lowering this section of the deck $2\frac{1}{2}$ feet at the outer end to its new position on the cylinders and securing it with reinforced concrete. The work was successfully completed in January, 1924, at a cost of \$18,089.83.

Marble Floors—Ferry Building.

The first-floor waiting rooms of the Southern Pacific, Santa Fe, Northwestern Pacific, Key System and Western Pacific Railways were paved with Columbia marble, a hard, light gray marble produced in California. This work greatly improved the appearance of the waiting rooms and also provided a more sanitary floor surface. The marble floors were laid at a cost of \$36,073.81 and the work was completed June 30, 1924.

2. EMBARCADERO SUBWAY.

On account of the steady increase in the business of the port and the waterfront industrial district, the congestion of traffic at the intersection of The Embarcadero and the foot of Market street has become increasingly acute. In order to relieve this congestion a vehicular subway is being constructed along The Embarcadero under the street railway loop in front of the Ferry Building. This subway will carry the

auto traffic and over it will pass the street cars and pedestrians without interference from vehicles.

The total length of the subway is 986 feet, consisting of two open approach sections each 298 feet in length and one central closed section 390 feet in length. The grade in the approaches is 3.75 per cent. The southerly entrance is located just north of Mission street and the northerly entrance is opposite the foot of Merchant street. At either end the closed section extends 85 feet beyond the nearest street railway loop track in order to provide a pedestrian way and a passage for automobiles approaching the Ferry Building. The width of the subway is 23 feet and the clear height of the closed section is 13 feet. The roof of this section will serve as a base for the asphalt wearing surface of the street. On account of a general settlement in the vicinity the top of the structure is above the present street surface, but when the work is completed the street will be raised to the established grade.

The subway is a reinforced concrete structure supported on piles and it is waterproofed throughout with membrane waterproofing. Storm-water inlets and drains are provided along both sides, the drains leading to a pump pit located on the westerly side near the center of the closed section. In the pump pit will be installed a 4-inch centrifugal sump pump operated by electric motor and automatically controlled by a float. The closed section of the subway will be lighted by electricity.

A general contract for the construction of the subway was awarded on November 1, 1923, and on June 30, 1924, the work was 57 per cent completed. The estimated cost of the work is \$350,000.

3. MAINTENANCE AND REPAIRS.

As in the past the major part of the maintenance and repair work on the waterfront structures was done by our own organization. This has necessitated the continuous employment of three piledriver crews, one top crew and the regular force of carpenters, painters, plumbers and other mechanics. In addition to the regular work of maintenance of the waterfront structures many damages caused by the transportation companies were repaired and charged to the accounts of those responsible. Numerous construction jobs were also done for our tenants and the gross revenue from these two sources for the two fiscal years amounted to \$135,388.65.

4. PAVING.

The Board is definitely committed to the policy of the construction of smooth pavement along The Embarcadero, and in conformity with this policy another section of basalt block pavement was removed during the biennial period. This section extended from Pier 19 to Pier 27, the length being 1340 feet and the width 60 feet. The pavement consists of a concrete slab 8 inches in thickness. In conjunction with the work, the existing curbs were reconstructed and the adjacent bulkhead wharf was covered with a 2-inch Topeka wearing surface. The pavement was completed in January, 1924, at a cost of \$36,262.64.

Following the construction of the railroad track along the south side of Pier 34 and the removal of the center track, the entire pier was paved over the plank deck with a 2-inch Topeka wearing surface. The extensions to Piers 22, 42 and 44 were also paved with the same material.

5. ELECTRICAL.

All electrical work required on the waterfront during the biennial period was done by our own electrical division, including both maintenance and repairs and new installations. Some of the more important items which were handled by the department were the following:

The extensions to Piers 22, 42 and 44 were wired and Piers 23 and 34 were completely rewired, all in conduit.

In the substructure of the China Basin Terminal all conduits and outlet boxes were roughed in, and the installation of light and power circuits in The Embarcadero subway was begun.

The machines in the shops were changed over to individual drive by the installation of 16 new motors operating with 3 ϕ current and with push button control. In conjunction with this change a new switchboard was installed in the engine room.

The circuits for the 2000 decorative lights on the arches of the nave of the Ferry Building were all rewired in conduit.

A new 35-horsepower electric siren was installed on the tower of the Ferry Building. This siren is operated automatically and sounds the correct time received from the Mare Island observatory at 8 a.m., noon, and 5 p.m. daily.

6. DREDGING.

It has been necessary to continue the operation of the dredging equipment with three watches during the last two years in order to maintain the necessary depth of water alongside the piers. With the area to be dredged and the required average depth steadily increasing, it is believed that it will be necessary to retain the three watches permanently.

7. TESTING.

As in the past all materials of construction have been tested and analyzed in our own laboratory during the biennial period. These included Portland cement, sand, gravel and crushed rock for concrete, reinforcing and structural steel, roofing and paving materials, creosote oil, red lead, white lead and graphite paint, linseed oil, etc. Numerous tests were made of specimens of concrete taken from work under construction. The testing of cement, concrete and steel for use in the construction of buildings at the various state institutions by the Department of Public Works, was continued.

8. DESIGNING AND DRAFTING.

During the biennial period the designing and drafting force made numerous studies and prepared plans for various minor items of construction in addition to the principal items which have already been mentioned. Much routine work was also necessary in connection with the permanent records of the department.

Plans were prepared for the following structures, the construction of which has not yet been begun:

China Basin Terminal, Superstructure.

Detail plans for a reinforced concrete building 812 feet in length, six stories in height, 137 feet in width on the first floor, 102 feet in width on all other floors with an automobile ramp and driveway at the second floor level.

Piers 48, 50 and 52.

Preliminary studies for a layout for three piers between Channel street and Pier 54, to be known as Piers 48, 50 and 52.

Pier 50.

Detail plans for Pier 50, length 600 feet, width 386 feet, the portion outside the sheds of creosoted pile and timber construction, the remainder of reinforced concrete construction.

Islais Reclamation.

Preliminary studies for the reclamation of approximately 26 acres of submerged land along the southerly side of Islais Creek east of the grain terminal.

9. RECOMMENDATIONS.**Islais Creek—India Basin Development.**

Detail plans are under way for the construction of a portion of the first unit of the Islais Creek—India Basin development. The plans contemplate the construction of approximately 1400 lineal feet of seawall along the southerly side of the Islais Creek channel with a wharf of the same length and 90 feet in width, and the reclamation of 26 acres of submerged land. On account of the nature of the materials available, considerable time will elapse after the land is reclaimed before it will be in usable condition. I therefore repeat the recommendation contained in the last two biennial reports, that this work be started as soon as possible so as to permit of ample time for the settlement and compacting of the fill.

Shops, Purchasing Department and Garage.

The time is rapidly approaching when the space at the north end of the Ferry Building now occupied by the Purchasing Department and the garage, will be required for facilities for the handling of shipping. The housing of these activities in timber structures constitutes a serious fire hazard and this is also true regarding the shops which are located on the dolphin between ferry slips 3 and 4. I recommend that in the near future a fireproof building be constructed on Seawall Lot 17 for the accommodation of these departments.

Paving Berry Street.

Since the completion of the substructure of the China Basin Terminal, it has been used as a thoroughfare by traffic moving between The Embarcadero and the Third street bridge over Channel street. Such traffic interferes with the use of the structure and causes unnecessary wear on the pavement. I recommend that steps be taken to secure the opening and paving of Berry street between Second and Third streets. This will provide a much-needed thoroughfare connecting The Embarcadero with the southerly portion of the industrial district of the city.

Dump Scows.

In the last report reference was made to the age and cost of maintenance of the dump scows which are used by the dredging division. I recommend that two new scows be constructed, the old ones being retained for emergency use.

In conclusion I desire to express my appreciation of the support accorded to me by the Board in connection with the work of the past two years and also to commend the faithful cooperation of all employees of the department.

Respectfully submitted,

FRANK G. WHITE,
Chief Engineer.

REPORT OF ATTORNEY.

To the Board of State Harbor Commissioners.

GENTLEMEN: My report from August 1, 1923, to July 1, 1924, is as follows:

I have drawn for the Board ten contracts which were executed and carried out, involving the sum of \$477,469.59.

The following is the history of litigation during the period mentioned:

1. *Henry Cowell Lime and Cement Company vs. State of California and members of Board of State Harbor Commissioners.* This is an action to restrain the Board from compelling plaintiff to move off of state property on The Embarcadero. Motion for nonsuit denied and case set for trial.

2. *Leslie Decot vs. J. H. McCallum, Harry H. Cosgriff and Miles Standish, as members of, and constituting the Board of Harbor Commissioners of the State of California.* This is an action to compel the Board to pay certain employees for services on holidays on which they did not work. Suit abandoned by plaintiff.

3. *Board of State Harbor Commissioners vs. Netherlands Transportation Company.* This is a claim of the Board of State Harbor Commissioners against the estate of a bankrupt for wharfage and tolls due from said transportation company. Claims were presented against the estate of the bankrupt covering the amounts due but no dividends received yet.

4. *People of the State of California vs. J. B. Coryell and United States Fidelity and Guaranty Company, a corporation.* This is an action for the recovery of moneys due the Harbor Board for the construction of wharves for the defendant Coryell. Case is on the calendar and ready for trial when reached by the court.

5. *Sunset Lumber Company vs. A. L. Pierce, doing business as Pacific Boat Company.* This is an action for the recovery of materials furnished in the construction of a tug boat for the Board of State Harbor Commissioners, the Harbor Board being joined as codefendants with contractor. Action compromised and dismissed by surety for contractor.

6. *Frank A. Somers vs. Chas. H. Spear, J. B. Sanford and M. F. Cochrane, constituting the Board of State Harbor Commissioners of the State of California.* This is an action by plaintiff seeking a mandatory injunction to compel the Board to remove the Islais Grain Terminal corporation from the space on the waterfront assigned to said corporation by the Board. Action dismissed.

7. *Frank A. Somers vs. Chas. H. Spear, J. B. Sanford and M. F. Cochrane, constituting the Board of State Harbor Commissioners of the State of California, and Islais Creek Grain Terminal Corporation, a corporation.* This is an action against the Board of State Harbor Commissioners and the Islais Creek Grain Terminal Corporation alleging a combination to injure plaintiff in the grain business. Injunction *pendente lite* sought against the Board and denied. Demurrer filed.

8. *John H. Taylor vs. Chas. H. Spear, J. B. Sanford and M. F. Coch-*

rane, constituting the Board of State Harbor Commissioners of the State of California in and for the City and County of San Francisco. This is an action to restrain the Board of State Harbor Commissioners from removing plaintiff from space on the waterfront occupied by plaintiff as a bootblack stand. Injunction sought against Board and granted. Case tried and submitted for decision by court.

9. *The United States of America vs. John H. McCallum, Fred S. Moody and Harry H. Cosgriff, constituting the Board of State Harbor Commissioners of the State of California, operating the State Belt Railroad.* This is an action to compel the Board of State Harbor Commissioners to operate the Belt Railroad in conformance with the rules and regulations of the Interstate Commerce Commission. Case was tried by the former attorney for the Board and lost. Two appeals have been taken, one to the Circuit Court of Appeals, and one to the Supreme Court of the United States. The action is still pending.

I have attended seven inquests over persons who met with fatal accidents on the Belt Railroad, and examined witnesses at the hearings thereof.

In addition to the foregoing, considerable time and effort has been spent in giving legal advice and counsel to the various departments under the Board on matters involving dockage, riparian rights, water courses, criminal law, admiralty law, state laws and tidelands.

Respectfully submitted.

W. T. PLUNKETT,
Attorney.

BOND ISSUES.

There have been five issues of state bonds for constructions on the San Francisco waterfront, commencing in 1891, when provision was made for the erection of the Ferry Building, which the law makers of the day called "a general ferry and passenger depot," and including the last issue of 1913 for construction of seawall wharves, piers and other betterments.

The authorized bond issues amounted to \$22,600,000 and the interest fixed in all issues was 4 per cent. Underwritten by the state, the security made them marketable at that low rate and all but \$7,000,000 have been sold, leaving available \$2,000,000 for sale in November, 1924, to provide for a new pier of modern design to be No. 50. With that expenditure there is a balance of \$5,000,000 for further harbor improvements.

The first seawall bond issue in amount \$2,000,000 was sold in 1903, when President Chas. H. Spear of the incumbent commission was president of the State Harbor Commission, and it was a pleasing duty falling to him in 1923 to redeem those bonds from operative earnings of the harbor in the intervening years. The first harbor bonds sold were redeemed earlier.

Prior to the act of 1903 authorizing the first sale of seawall bonds, bonds were sold by the Commission in their entirety at one time and at a premium. Under the act of 1903, passed during Mr. Spear's incumbency, the law was changed so bonds could be sold as desired by the Commission which was a great saving of interest to the state, and all bond issues subsequent to that period were sold at a premium up to the

time of the World War. Provision was also made in the act of 1903 for the redemption of bonds by lot, when sufficient money was in the Sinking Fund, and it was made compulsory upon the State Treasurer to advertise the redemption of such bonds once a year.

Authorized Bond Issues.

| | | |
|---------------------------------|------------------|-----------------|
| Depot and Ferry Building----- | Act of 1891----- | \$600,000 00 |
| San Francisco Seawall Fund----- | Act of 1903----- | 2,000,000 00 |
| Second Seawall Fund----- | Act of 1909----- | 9,000,000 00 |
| India Basin Purchase----- | Act of 1909----- | 1,000,000 00 |
| Third Seawall Fund----- | Act of 1913----- | 10,000,000 00 |
| Total ----- | | \$22,600,000 00 |

There remains outstanding in these bond issues \$15,000,000 and a balance of \$5,000,000 unsold bonds.

Ferry Traffic.

General ferry, 981,009 short tons freight; 53,448,923 passengers; 1,660,071 automobiles; 33,415 teams; 13,709 motor-cycles; 1,446 stock. Car ferry, 1,632,608 tons freight.

TRAFFIC ON INLAND WATERWAYS.

Inland waterways emptying into San Francisco Bay add largely to the volume of traffic by river steamers plying on the Sacramento and San Joaquin rivers. Official reports made to Major U. S. Grant III, engineer in charge of rivers and harbors on the Pacific coast, covering traffic on the Sacramento and San Joaquin rivers, show increasing harbor tonnage, for most of the shipments are delivered on wharves under control of the Harbor Commission. Major Grant sums up these river traffic reports for the calendar year 1923 as follows:

(Sacramento and San Joaquin and Mokelumne rivers as one river system.)

Year 1923—Freight carried, 2,039,798 short tons, value of which was \$105,521,832. Passengers carried, 268,169. This vast commerce was carried by 235 registered and 172 unregistered vessels.

Captain A. E. Anderson, president of the California Transportation Company, operating large steamers that move most of the freight on the two rivers, adds interest to Major Grant's report in the following explanation of river traffic conditions on which the federal report is based:

Major Grant has segregated the tonnage and credited the Sacramento River with 1,264,821 tons, valued at \$62,470,235; the San Joaquin River, 679,773 tons valued at \$38,027,909; the Mokelumne River (a tributary), 77,204 tons valued at \$5,023,688. I prefer to speak of these rivers as one river system because their waters intermingle and I realize that it is impossible to segregate the traffic carried on these waterways to an absolute nicety for the reason that a number of freight vessels gather part of their cargo on the Sacramento River and pass through some connecting slough into the San Joaquin River, where they finish loading and it is quite difficult for the owners of the vessels to furnish Major Grant's office the tonnage from each river separately.

You will note an increase of about 240,000 tons in the past two years. The average value, nearly \$52 per ton, undoubtedly indicates that this is the most valuable commerce carried on any of the interior waterways of the United States, with the exception of a port like Tampa, Florida, where practically the entire product would be tobacco.

We have every reason to expect the commerce on our California waterways to increase in future as it has during the past ten years. Lands in the delta and valley above are being divided into small holdings and we find today diversified farming in great districts which formerly were scattering grain fields.

These reports show an increased tonnage in 1923 over the traffic for the year 1921, totaling 239,905 tons and an increase in valuation of the freight amounting to \$4,805,891. Going back to 1880, the total tonnage on the two rivers for one calendar year was 506,018 tons, the gain in forty years being 1,533,780 tons in valley produce shipped into San Francisco.

DRY DOCKS, MARINE RAILWAYS AND DERRICK FACILITIES IN THE PORT OF SAN FRANCISCO.

Graving Docks.

HUNTER'S POINT.

Bethlehem Shipbuilding Corporation, Limited:

- No. 2. Length, 750 feet; width, top, 103 feet; width, bottom, 86 feet; depth, over sill, 29 feet.
- No. 3. Length, 1,020 feet; width, top, 153 feet; width, bottom, 110 feet; depth over sill, 45 feet 6 inches.

Floating Dry Docks.

Bethlehem Shipbuilding Corporation, Limited:

- No. 2. Length, 271 feet; width, 66 feet; capacity, 2,000 tons.
- No. 3. Length, 301 feet; width, 68 feet; capacity, 2,500 tons.
- No. 4. Length, 450 feet; width, 80 feet; capacity, 6,500 tons.
- No. 5. Length, 421 feet; width, 90 feet; capacity, 12,000 tons.

Moore Shipbuilding Company:

- No. 1. Length, 650 feet; width, 90 feet; capacity, 20,000 tons.
- No. 2. Length, 350 feet; width, 90 feet; capacity, 9,500 tons.

Marine Railways.

Bethlehem Shipbuilding Corporation, Limited:

- No. 1. Length, 320 feet; capacity, 4,000 tons.
- No. 2. Length, 270 feet; capacity, 2,000 tons.

Moore Shipbuilding Company:

- No. 1. Length, 380 feet; width, 76 feet; capacity, 8,000 tons.
Length of largest vessel taken, 450 feet. With extensions.
- No. 2. Length, 442 feet; width, 76 feet; capacity, 8,000 tons.
Length of largest vessel taken, 510 feet. With extensions.
- No. 3. Length, 360 feet; width, 76 feet; capacity, 5,400 tons.
Length of largest vessel taken, 430 feet. With extensions.

Barnes and Tibbitts Shipbuilding and Dry Dock Company:

- No. 1. Length, 340 feet; width, 66 feet; capacity, 4,000 tons.
- No. 2. Length, 290 feet; width, 60 feet; capacity, 2,500 tons.

Hanlon Dry Dock and Shipbuilding Company:

- No. 1. Length, 434 feet; capacity, 12,500 tons.

Shear Leg Derricks.

Bethlehem Shipbuilding Corporation, Limited:

- 1 stationary, 100 ton capacity.
- 1 stationary, 50 ton capacity.
- 1 floating, 20 ton capacity.

Moore Shipbuilding Company:

- 1 stationary, 100 ton capacity.

Barnes and Tibbitts Shipbuilding and Dry Dock Company:

- 1 stationary, 40 ton capacity.

Floating Boom Derricks.

Smith, Rice and Company, Incorporated:

- 1 derrick, length of boom, 100 feet; lifting capacity, 75 tons.
- 1 derrick, length of boom, 100 feet; lifting capacity, 25 tons.
- 1 derrick, length of boom, 100 feet; lifting capacity, 20 tons.

Crowley Launch and Tugboat Company:

- 1 derrick, length of boom, 110 feet; lifting capacity, 75 tons.
- 2 derricks, length of boom, 100 feet; lifting capacity, 25 tons.
- 2 derricks, length of boom, 100 feet; lifting capacity, 5 tons.

Henry C. Peterson, Incorporated:

- 1 derrick, length of boom, 100 feet; lifting capacity, 7 tons.

Havieside Company:

- 1 derrick; length of boom, 96 feet; lifting capacity, 15 tons.
- 1 derrick; length of boom, 100 feet, lifting capacity, 50 tons.
- 1 derrick, length of boom, 100 feet, lifting capacity, 25 tons.

Barnes and Tibbitts Shipbuilding and Dry Dock Company:

- 1 derrick, length of boom, 90 feet; lifting capacity, 7 tons.

SAN FRANCISCO PILOTAGE AND TOWAGE RATES.

Port of San Francisco—Charges, Regulations, Etc., Not Under Jurisdiction of Board of State Harbor Commissioners.

PILOTAGE.

Jurisdiction: San Francisco Board of Pilot Commissioners, a state body, composed of three members. Office of Commissioner, Merchants Exchange Building, San Francisco; Pilot Office, Pier 7, San Francisco.

Pilotage in and out of San Francisco harbor is under the jurisdiction of a State Board of Pilot Commissioners, appointed by the Governor, which body establishes the rules and regulations regarding the conduct of all pilots, as well as licensing and commissioning pilots.

Pilotage in and out of San Francisco Bay is generally compulsory, except as follows:

All vessels sailing under an enrollment, and licensed and engaged in the coasting trade between the Port of San Francisco and any other port of the United States are exempt from pilotage unless a pilot be actually employed.

All foreign vessels and all vessels from a foreign port or bound thereto, and all vessels sailing under a register between the Port of San Francisco and any other port of the United States are liable for pilotage.

Rates for pilotage are fixed by state law as follows:

All vessels under 500 tons, \$2 per draught foot;

All vessels over 500 tons, \$2 per draught foot and 2 cents per ton for each and every ton registered measurement; and every vessel spoken inward and outward bound, except as hereinafter provided, shall pay the said rates.

A vessel is spoken by day by a pilot boat displaying a union jack, or by night displaying a torch or flare-up within a distance of three miles of the vessel. In all cases where inward bound vessels are not spoken until inside of the bar the rates of pilotage herein provided shall be reduced 50 per cent. Vessels engaged in the whaling or fishing trades shall be exempt from all pilotage except where a pilot is actually employed.

In the event a vessel not carrying cargo to the Port of San Francisco, nor seeking any thereat, is compelled to enter said port solely by reason of her being in distress or requiring repairs, provisions or fuel, the rates of pilotage into said harbor shall be as follows:

All vessels under 500 tons, \$1 per draught foot;

All vessels over 500 tons, \$1 per draught foot and 1 cent per ton for each and every ton registered measurement; and every vessel spoken inward bound shall pay the said rates. There shall be no reduction of rates of pilotage to vessels in distress where the vessel is spoken inside the bar. In the event that the vessel shall leave the Port of San Francisco without carrying any cargo therefrom, she shall pay the last-mentioned rates of pilotage out of the harbor of San Francisco.

TOWAGE.

Towage in San Francisco is conducted by private tow boat companies and the charges for the services performed vary according to the conditions under which the contract is to be carried out, but are generally assessed within the range of the following schedule:

Sailing Vessels.

The cost of towage from sea (lightskip) to anchorage varies with distance and size of vessel, ranging from \$100 to \$250.

For moving a vessel of 2000 tons net register in the harbor the charges are approximately:

| | |
|--|---------|
| Docking, city front----- | \$75 00 |
| Stream to Port Costa or Port Costa to stream----- | 175 00 |
| Stream to sea (lightskip)----- | 200 00 |
| Fore and aft rigged vessels pay, according to size, from \$20 to \$30 for docking, and from \$50 to \$100 for towing to sea. | |

Steam and Motor Ships.

(Charges based on net tonnage of vessel.)

| | |
|---|--------------------|
| 1. Services of tug assisting to dock on city front----- | \$25 00 to \$40 00 |
| 2. Towing (without power) from dock to dock between Meiggs (Fisherman's) Wharf to Mission Rock----- | 75 00 to 150 00 |
| 3. Services of tug assisting to Union Iron Works or Hunter's Point----- | 40 00 to 70 00 |
| 4. Towing (without power) to Union Iron Works or Hunter's Point----- | 90 00 to 225 00 |
| 5. Services of tug assisting to Oakland Harbor (East of Bridge at Webster street)----- | 50 00 to 75 00 |
| 6. Towing (without power) to Oakland Harbor----- | 100 00 to 250 00 |

PORT WARDEN.

Port Warden. Appointed by Governor.

Fees: \$15 for each survey, but not to exceed \$75 on any vessel; rates on foreign vessels 50 per cent greater; separate certificate of surveys required by different consignees, \$2.50 each; \$10 each order of sale.

Water Rates Now in Effect in The Port Of San Francisco.

| Gallons— | Cubic feet | New rate |
|--------------|------------|----------|
| 10,000----- | 1,334 | \$15 70 |
| 20,000----- | 2,667 | 19 54 |
| 30,000----- | 4,000 | 23 12 |
| 50,000----- | 6,667 | 29 84 |
| 100,000----- | 13,334 | 46 64 |
| 200,000----- | 26,667 | 80 24 |

**UNITED STATES GOVERNMENT REGULATIONS,
FEES AND OFFICIALS.****CUSTOMS DISTRICT.**

The Customs District of the Port of San Francisco comprises all that portion of the State of California north of the county of Santa Barbara.

Custom House, located at Washington and Battery streets, San Francisco. Customs Officers: Collector of Customs, W. B. Hamilton; Assistant Collector of Customs, Henry E. Farmer; Surveyor of Customs, L. J. Flaherty; Assistant Surveyor of Customs, John T. Stone; Comptroller of Customs, John J. Deane; Appraiser of Customs, Bert Kahn.

CUSTOMS FEES.

The ordinary entrance fees for vessels arriving from foreign ports with cargo are \$5.70 for foreign vessels and \$2.70 for American vessels.

The ordinary clearance fees for vessels going to foreign ports, either American or foreign vessels, are \$2.70.

Foreign vessels entering from a domestic port are charged a fee of \$2; likewise a fee of \$2 for clearing to a domestic port.

UNITED STATES INSPECTION OF STEAM VESSELS.

John K. Bulger, Customs House, Supervising Inspector First District.

Joseph P. Dolan, United States Local Inspector of Boilers.

Frank H. Turner, United States Local Inspector of Hulls.

Walter Macarthur, United States Shipping Commissioner, Appraiser's Building.

UNITED STATES IMMIGRATION SERVICE.

John D. Nagle, Commissioner of Immigration; offices: Angel Island and Appraiser's Building, San Francisco.

UNITED STATES QUARANTINE SERVICE.

Dr. R. H. Creel, Surgeon, United States Public Health Service, in charge; offices: Angel Island and Barge Office, Fisherman's Wharf, San Francisco.

The federal government handles the entire matter of inspection, quarantine and fumigation in this port. Where fumigation is required, the charge amounts to about thirteen cents per thousand cubic feet of air space fumigated, plus one dollar for supervision and two dollars labor. This applies where the operation is conducted at the Angel Island Station, but in cases where vessels are fumigated on the San Francisco side, the expenses of the fumigating officer amounting to hotel accommodations and incidental expenses are charged in addition to the above rate.

UNITED STATES LIGHTHOUSE SERVICE.

H. W. Rhodes, Inspector; office: Customs House.

UNITED STATES ATTORNEY.

Sterling Carr; office: Post Office Building.

UNITED STATES MARSHAL.

Fred Esola; office: Post Office Building.

UNITED STATES PASSPORT AGENCY.

William A. Newcome, Passport Agent; office: Custom House.

INTERNAL REVENUE DEPARTMENT.

John P. McLaughlin, Collector; office: Custom House.

UNITED STATES BUREAU OF FOREIGN AND DOMESTIC COMMERCE.

Leonard B. Gary, District Manager; office: Custom House.

UNITED STATES COAST GUARD SERVICE.

Captain J. M. Moore, Division Commander, Southern Division; office: Custom House.

LIFE SAVING DIVISION.

G. B. Lofberg, District Superintendent.

UNITED STATES NAVY.

Office: Twelfth Naval District, Custom House.

FEDERAL HORTICULTURAL SERVICE.

Office: Plant Quarantine, Ferry Building.

BOARDS OF STATE HARBOR COMMISSIONERS.

First Board—C. L. Taylor, appointed November 4, 1863; D. C. McRuer, appointed November 4, 1863; S. S. Tilton, appointed November 4, 1863.

Second Board—C. L. Taylor; S. S. Tilton; James Laidley, appointed November 6, 1865.

Third Board—S. S. Tilton; James Laidley; James H. Cutter, appointed November 4, 1867.

Fourth Board—James H. Cutter; John J. Mark, appointed December 6, 1869. Jasper O'Farrell, appointed January 15, 1870.

Fifth Board—John J. Marks; Jasper O'Farrell; Washington Bartlett, appointed June 23, 1870.

Sixth Board—John J. Marks; Jasper O'Farrell; John Rosenfeld, appointed November 29, 1871.

Seventh Board—John Rosenfeld; Jasper O'Farrell; Lewis Cunningham, appointed March 1, 1873.

Eighth Board—Lewis Cunningham; John Rosenfeld; Samuel Soule, appointed March 13, 1873.

Ninth Board—Lewis Cunningham; Samuel Soule; T. D. Mathewson, appointed June 5, 1873.

Tenth Board—Samuel Soule; T. D. Mathewson; D. C. McRuer, appointed April 21, 1874.

Eleventh Board—Wm. Blanding, appointed March 4, 1876; Bruce B. Lee, appointed March 4, 1876; A. M. Burns, appointed March 4, 1876. Frank McCoppin succeeded Burns, October 28, 1879.

Twelfth Board—Wm. Blanding; G. S. Evans, appointed January 27, 1880; Wm. A. Phillips, appointed March 4, 1880.

Thirteenth Board—Wm. Blanding; Wm. H. Knight, appointed November 23, 1882; Geo. S. Evans; Wm. A. Phillips.

Fourteenth Board—Wm. Irwin, appointed March 20, 1883, died March 1, 1886. A. C. Paulsell, appointed March 20, 1883; John H. Wise, appointed March 20, 1883.

Fifteenth Board—Frank McCoppin, appointed April 1, 1886; A. C. Paulsell; John H. Wise.

Sixteenth Board—William D. English, appointed March 13, 1887; A. C. Paulsell; John H. Wise.

Seventeenth Board—William D. English; A. C. Paulsell; Charles O. Alexander, appointed March 13, 1889.

Eighteenth Board—William D. English; Charles O. Alexander; William H. Brown, appointed March 13, 1890.

Nineteenth Board—C. F. Bassett, appointed March 31, 1891; Charles O. Alexander; William H. Brown.

Twentieth Board—C. F. Bassett; William H. Brown; Dan T. Cole, appointed March 13, 1893.

Twenty-first Board—C. F. Bassett; Dan T. Cole; F. S. Chadbourne, appointed March 13, 1894.

Twenty-second Board—E. L. Colnon, appointed March 14, 1894; Dan T. Cole; F. S. Chadbourne.

Twenty-third Board—E. L. Colnon; F. S. Chadbourne; P. J. Harney, appointed March 20, 1897.

Twenty-fourth Board—E. L. Colnon; P. J. Harney; Rudolph Herold, Jr., appointed March 13, 1898.

Twenty-fifth Board—Paris Kilburn, appointed March 14, 1899; P. J. Harney; Rudolph Herold, Jr.

Twenty-sixth Board—Chas. H. Spear, appointed March 16, 1903; John C. Kirkpatrick; John D. Mackenzie.

Twenty-seventh Board—W. V. Stafford, appointed March 19, 1907; Henry J. Crocker; W. E. Dennison.

Twenty-eighth Board—W. V. Stafford; W. E. Dennison; P. S. Teller, appointed April 1, 1909.

Twenty-ninth Board—W. V. Stafford; P. S. Teller; George M. Hill, appointed January 7, 1911.

Thirtieth Board—Marshall Hale, appointed March 26, 1911; George M. Hill, J. J. Dwyer, appointed March 26, 1911.

Thirty-first Board—J. J. Dwyer; George M. Hill, died July 10, 1912; Thomas S. Williams, appointed July 27, 1911.

Thirty-second Board—J. J. Dwyer; Thomas S. Williams; John H. McCallum, appointed July 30, 1912.

Thirty-third Board—Arthur Arlett, appointed February 15, 1917; Thomas S. Williams; John H. McCallum.

Thirty-fourth Board—Arthur Arlett; John H. McCallum; Harry H. Cosgriff, appointed June 6, 1918.

Thirty-fifth Board—John H. McCallum; Harry H. Cosgriff; Miles Standish, appointed December 6, 1918.

Thirty-sixth Board—John H. McCallum; Harry H. Cosgriff; Frederick S. Moody, appointed March 1, 1920.

Thirty-seventh Board—Chas. H. Spear, appointed May 21, 1923; J. B. Sanford, appointed May 24, 1923; M. F. Cochrane, appointed August 1, 1923.

SEAWALL LOTS.

STATE CIVIL SERVICE COMMISSION
STATE OF CALIFORNIA

SIXTH BIENNIAL REPORT
TO THE GOVERNOR.

COMMISSIONERS.

DAVID J. REESE, *President and Executive Member*-----Ventura
JOHN F. GALVIN, *Associate Member*-----Richmond
CECILIA M. CHAMBERLAIN, *Associate Member*-----Greenville

NOVA J. BEAL,
Acting Chief Examiner.

LODEMA SHURTLEFF,
Secretary.

HISTORICAL REGISTER OF THE COMMISSION.
Commissioners (Old Statute).

CHARLES WESLEY REED,
Appointed August 12, 1913; served to July 29, 1921.

JAMES M. HUNTER,
Appointed August 12, 1913; resigned March 14, 1917.

EDGAR WILLIAMS,
Appointed August 12, 1913; served to July 29, 1921.

DAVID J. REESE,
Appointed March 14, 1917; served to July 29, 1921.

Commissioners (New Statute).

DAVID J. REESE, *President and Executive Member*,
Appointed July 30, 1921; term expires July 1, 1925.

EDGAR WILLIAMS,
Appointed July 30, 1921; resigned January 1, 1922.

CLYDE SEAVEY,
Appointed July 30, 1921; resigned January 4, 1923.

JOHN F. GALVIN,
Appointed January 1, 1922; term expires July 1, 1926.

CECILIA M. CHAMBERLAIN,
Appointed January 4, 1923; term expires July 1, 1924.

STATE CIVIL SERVICE COMMISSION
STATE OF CALIFORNIA

SIXTH BIENNIAL REPORT
TO THE GOVERNOR.

To His Excellency FRIEND WM. RICHARDSON,
Governor of the State of California,
State Capitol, Sacramento, California.

Subdivision eight, section five, of the Civil Service Act of California, provides that the Civil Service Commission shall:

“Make a biennial report to the Governor for transmission to the legislature, showing the action of the Commission, including all the rules and regulations adopted by it during such period and those that are in force at the time of making such report, information as to the exempted positions as required by this act, and the effects of this act and of all proceedings under it, and any suggestions the Commission may deem practical for the more effectual accomplishment of this act.”

In accordance with this provision of the law, the State Civil Service Commission has the honor to submit its sixth biennial report.

In addition to the presentation of the activities of the Commission during the present biennium, this report includes:

Appendix I—A table showing the status and number of employees in the state service, October 15, 1924.

Appendix II—A tabular statement of examinations held and results obtained during the biennium.

Appendix III—Financial statement for the seventy-fourth and seventy-fifth fiscal years.

Appendix IV—A list of persons who assisted in conducting examinations during the biennial period 1922-1924.

Appendix V—The Civil Service Act (chapter 590, 1913; chapter 654, 1919; chapters 577, 601, 1921; chapter 314, 1923).

Appendix VI—Rules and regulations of the Commission which were rewritten and adopted following the reorganization of the Commission, July 30, 1921, and as amended since that time and in force at the time of this report.

PROGRESS OF CIVIL SERVICE IN CALIFORNIA.

The State Civil Service Commission was created by act of the state legislature in 1913 (chapter 590, approved June 16, 1913). Under that legislative enactment a commission of three commissioners was authorized. The legislature of 1921 amended the Civil Service Act so as to provide for a commission of three commissioners, one of whom should be president and executive member of the Commission. The enactment of the original civil service laws by the legislature of 1913 committed

the citizens of California to an unqualified approval of the merit system as applied to the selection of competent employees for the service of the state; the reenactment of the law and the reorganization of the Commission in 1921 still further demonstrated the belief in the approval of the merit system by the people of the state; and the amendments of the legislature since that time have tended to strengthen and improve the provisions of the Civil Service Act rather than to impair them in any particular. The State of California is thus committed to the policy that it is necessary and is wise to recruit trained and capable employees for carrying on its increasingly important business. In a commonwealth where political patronage had controlled for years, civil service and the merit system were not received with any enthusiastic welcome at the time of the adoption of the act. But notwithstanding oppositions and attempted evasions, the foundations were laid for civil service direction and administration, and, although an ideally correct civil service system has not been attained and perhaps may never be, yet the results have demonstrated that the Civil Service Commission under the act has succeeded in building up and maintaining a new employment policy as an important part of the governmental machinery. With a change in the administration of state government since the filing of the fifth biennial report, many new heads of departments were installed. These, with but few exceptions, accepted the civil service policy and system then in effect and even where antagonisms did exist, such antagonisms were largely due to a misunderstanding of civil service provisions and procedure. The Civil Service Commission is pleased to report at this time that practically all departments of state government are not only working in full accord with the provisions of the Civil Service Act, but are lending assistance and cooperation in making civil service and the merit system more effective in bringing the best and most competent employment service to the state.

SUPPORT AND COOPERATION OF THE GOVERNOR.

In his inaugural message to the legislature and the people of this state, Honorable Friend Wm. Richardson, Governor of California, unequivocally expressed his attitude toward civil service in the following statement:

"Civil Service has proved its worth, and the defects complained of are mainly those of administration. Civil Service to be truly appreciated must be contrasted with the old spoils system. Civil Service employees who become inefficient should be promptly recommended for discharge, as the state should be protected as well as the employees."

When the first opportunity came for the Governor to attest his faith by performance, he promptly approved the legislative act amending the Civil Service Act and granting to the Civil Service Commission the power to classify positions in the civil service and to grade all positions within each class with respect to salaries.

In its efforts to bring about better civil service procedure and to enforce the provisions of the Civil Service Act, the Commission has in every particular had the active and interested cooperation and support of the Governor, and in acknowledgment of the support it has received

this Commission avers that the harmony now existing between other state departments and the Civil Service Commission and the general acceptance of civil service by the state departments are due in a large measure to the Governor's belief in and endorsement of the merit system.

EFFICIENCY AND ECONOMY.

The establishment of civil service and the merit system in California has resulted not alone in bringing far greater efficiency to every state department under civil service jurisdiction, but it has also resulted in the saving of thousands of dollars to the state. Under the Civil Service Act now in effect the Commission is authorized to:

"Classify positions to be held under state authority in accordance with the provisions of this act and in accordance with the duties attached to such positions. The Commission shall grade all positions within each class with respect to salaries, to the end that like salaries shall be paid for like duties."

After years of diligent effort, careful and earnest research and investigation, a scientific study of the public service in other states and municipalities, as well as of the personnel and employment service of private corporations in California and elsewhere, this Commission has established just and scientific salary standards for all positions under its jurisdiction and has made a proper classification of every position in the service. The salaries of all employees under civil service jurisdiction are based upon these standards and no employee is permitted to receive, nor is any department permitted to pay, a salary which does not conform to such standards. Furthermore, no salaries may be increased without the approval of the Commission and such salary increases must be in accord with the schedules established by the Commission under the law. All requests for increases in salary presented by department heads to this Commission for its approval are subject to careful consideration and investigation. The time and amount of the latest increase and the civil service status of the employee are carefully checked. Too frequent increases, except in emergency cases, are discouraged and are usually denied. The Commission has adopted the policy of refusing to accept requests for increases oftener than twice each year and has indicated the desirability of presenting such requests but once each year.

Following the selection of competent and capable employees for the service of the state, the Civil Service Commission believes that its greatest and most important function is the control and direction of the salary schedules for these employees. There has been and there can be no contradiction of the statement that the selection of employees under a competitive merit system and the compensation of these employees under the salary standardization schedules adopted by this Commission have resulted in the maximum of efficiency in service and in great saving to the state.

The Civil Service Act and the salary standardization rules adopted by this Commission not only act as a ban to indiscriminate increases in salary and thus result in great saving, but also to the denial of many proposed increases because of nonconformity to the schedules and other irregularities. By arrangement with the Department of Finance, all

matters of salaries after approval by the Civil Service Commission are referred to a conference of the two departments, which conference ascertains if such salaries are in accord with the appropriation and budget provisions for the department making the request.

PAY ROLL CONTROL.

Section 17 of the Civil Service Act provides that

"it shall be unlawful for the controller or other fiscal officer of the state to draw, sign, issue, or authorize the drawing, signing, or issuing of any warrant on the treasurer or other disbursing officer of the state for the payment of, or for the treasurer or other disbursing officer to pay, any salary or compensation to any one holding any position under the provisions of this act unless the estimate, pay roll or account for such salary or compensation, containing the name of the person to be paid, shall bear the certificate of the Commission that the persons named in such estimate, pay roll or account are holding positions as provided by this act and the rules and regulations prescribed thereunder."

This provision of the statute has been undoubtedly the most potent of all the means of enforcing the law. The provision of the law requiring certification of pay rolls proves itself most valuable. Without such a provision, appointments might be made without strict observance of the civil service rules, and fiscal officers might at times be persuaded to pay compensation to those irregularly selected. Systematic presentation to the Civil Service Commission of all pay rolls, with careful scrutiny by such Commission, is necessary in order to maintain this important feature of the civil service law.

SCIENTIFIC EMPLOYMENT IN THE STATE SERVICE.

During the past few years the methods of selecting and placing employees have developed to the point where employment may well be spoken of as a science, and today the employment and personnel department is recognized as an essential part of every well organized business of any importance. Public business has also come to recognize that the selection and building up of an efficient working force is as essential to its success as to the success of private business. The Civil Service Commission may be said to bear the same relation to the efficiency of state government as the employment and personnel department bears to the success of a large business organization. In other words, through its earnest efforts to improve the methods of selecting employees for state service by establishing suitable entrance requirements and by setting salary standards which guarantee like pay for like work, the Commission feels that it has increased the efficiency of the state service by bringing into the service a higher type of employee, with a resultant higher type of service, by reducing costly labor turnover, and by systematic regulation of the compensation of employees.

INCREASE IN EXAMINATIONS.

In response to and in thorough accord with the expressed purpose of the Governor for economy and efficiency in state government, this Commission reduced its estimate for budget appropriation for the biennium

to the minimum for efficient administration and this budget appropriation was given prompt approval by the Governor. Notwithstanding a reduced appropriation and a consequent reduction in the examining division of this Commission, there has been no reduction in activity or in the work accomplished by the Commission. On the contrary, the biennial period has shown a marked increase in its work.

During the past two years the character and duties of 567 positions in the state service were considered and examinations were prepared for such positions. During the preceding biennial period, 498 positions were given consideration. During the past two years, also, 8895 persons have presented themselves for examination and their qualifications have been passed upon either by written or oral examinations, or by both. This is in comparison with 8610 applicants examined in the preceding biennial period, and is the largest number of applicants examined in any similar period in the history of the Commission.

The Commission is pleased to report in addition to the above that notwithstanding an increase in the number of employees in the civil service under the jurisdiction of this Commission within the last few years, it has been able, by reason of constant activity in examination work, to reduce the number of temporary authorization appointments from 3038 in November, 1922, to 2236 in October, 1924. The number of temporary authorizations today is less than ever before in the history of the Civil Service Commission.

TESTS ARE PRACTICAL.

The old impression among people generally that civil service examinations are neither practical nor fitted for the particular positions which applicants seek, no longer obtains to any large degree. Civil service procedure in this state has long since discarded the stilted, the academic and the strictly scholastic type of civil service examination. On the contrary, examinations, as now conducted by this Commission, are based upon the practical knowledge of the applicant for the position, and previous experience is given full weight in the rating of the competitors. Training for the particular work; education, general and special; and, so far as is possible, personal qualifications, are given full consideration. The Commission, in many examinations, has dispensed with the written test and has depended solely upon oral interviews, given by impartial boards, where education, training, experience and knowledge of the particular position and its duties, as shown by answers to oral questions, are the basis of the competitive rating.

In its endeavor to perfect its examination procedure and bring each examination to that point where it will accurately test the qualifications essential to success in a given position and eliminate all competitors who do not possess such qualifications, the Commission has been ably assisted by the Bureau of Public Personnel Administration of Washington, D. C. This bureau was organized through the efforts of the National Assembly of Civil Service Commissions for the purpose of developing standard tests for the various types of public service. In the short time since its inception, the bureau, as a result of its scientific experiment and research, has suggested improvements in examination methods which have already proved of great value, not only to this Commission, but to all other Civil Service Commissions as well.

The Civil Service Act and the rules of this Commission provide for promotional examinations for those employees, who by reason of length of service, efficiency and particular ability, have earned such promotion. This Commission is thoroughly in accord with such procedure and during the biennial period, at the request of department heads, has given many such examinations.

In practically all of its examinations this Commission has had the assistance and cooperation of some of the best qualified, most capable, and highest salaried men and women in California, most of whom are either in responsible positions with private corporations or who are managers or owners of great business enterprises themselves; and the services of these assistant examiners have been given to the Commission and to the state generously and gratuitously and often at great sacrifice on the part of these examiners. Due acknowledgment is made for this assistance in another part of this report.

EXAMINATIONS FOR POSITIONS OF HIGH SALARY.

Examinations for a large number of responsible positions carrying salary compensations considerably above the average have been included in the examinations for the biennial period. These examinations and the salary schedules therefor include the following:

| | |
|---|-------------|
| Senior Accountant | \$200-\$265 |
| Principal Accountant | 275- 375 |
| Bank Examiner, Grade 4 | 210- 265 |

STANDARDIZATION AND CLASSIFICATION.

The Governor of this state, by his approval of the legislative amendment giving unqualified authority to the Civil Service Commission in the matter of salary standardization and employment classification, insured to the Commission unqualified and effective administration of its function.

Following the work already so well begun and strengthened by the amendment to the Civil Service Act, the Commission during this biennium has continued to improve and perfect the classification of the state service on the basis of the work performed and to establish specifications for each group of similar positions which make up the service. In its work it has had the helpful suggestion and cooperation of heads of departments. As the duties of department employees change in nature or increase in scope, adjustments in classification and salary schedules are necessary, and this Commission has been ready to grant such adjustments wherever and whenever justified.

The Civil Service Act provides (section 5) that the Civil Service Commission shall grade all positions within each class with respect to salaries, to the end that like salaries shall be paid for like duties. In its biennial report of December, 1922, this Commission stated, and it now desires to reiterate, that like salaries for like duties, or in other words, equal pay for equal work, seems so just a principle that it should be accepted without argument. There can be no "like salaries for like duties," however, in a governmental system where many positions are statutory both as to creation and salary, and where many positions are exempt by law and even whole departments are exempt. Overpay for one individual is a constant irritation to others and tends to impairment of service. It is useless, as well, to discuss equalization of pay for public employees without taking into consideration equal hours of service, equal working conditions, leaves of absence and similar factors.

There is a noticeable dissimilarity in these conditions in state employment, so noticeable, in fact, that this Commission, in connection with its classification and standardization work, has endeavored, without avail, by personal suggestion, to bring about uniformity in some particulars. In striking contrast to these conditions, however, is the situation in the state institutions where by reason of previous conferences with the Department of Institutions there is a uniformity of salaries based upon length of service and duties of position and a consequent harmony as a result.

EXEMPTIONS.

The Civil Service Act provides that any positions subject to the provisions of the act may be exempted from civil service by unanimous resolution of the three members of the Commission. During this biennial period and for the first time in the history of civil service in this state, no exemptions have been granted by the Commission.

CIVIL SERVICE PROCEDURE.

Procedure in the Civil Service Commission is governed by the laws and rules and regulations of the Commission. Some details of interest are:

1. Vacancies in positions in all state departments under civil service jurisdiction are reported to the Civil Service Commission, with request for certification.
2. Upon request for such certification, the Commission certifies to said department the names of the three highest available eligibles upon the list from which such certification must be made, or from "the eligible list most nearly appropriate for the position to be filled." Said department must select one from among the three certified.
3. In the absence of an eligible list, temporary authorization is issued for the appointment outside of civil service but such temporary authorization does not hold good for longer than three months.
4. In the absence of an eligible list the Commission at once proceeds to hold an examination, if practicable, and such examination is announced about thirty days before it is held. Applications must be filed a reasonable time before the examination.
5. Public announcement is made of all examinations, and such announcement must include information as to time and place, duties of position, salary and requirements.
6. Applications are made upon written blanks furnished by the Commission. It is the practice of the Commission to hold written examinations simultaneously in Sacramento, Los Angeles and San Francisco.
7. Papers are rated as quickly as possible after the examinations and as soon thereafter as is practicable, oral examinations are conducted by the Commission, assisted by competent examiners comprising an oral examining board. Following the oral examinations ratings based upon both oral and written tests are compiled and the eligible lists are issued and made public.
8. An eligible list continues in existence for at least one year.
9. Eligibles may waive certification for reasons considered satisfactory by the Commission.
10. To meet an actual emergency, any person, whether an eligible or not, may be appointed to serve for a period not exceeding fifteen days.
11. Every person appointed from an eligible list must serve a probationary period of six months. After that time the appointment becomes permanent and the appointee is entitled to all civil service rights.
12. Leaves of absence and sick leaves with or without pay must be submitted to and approved by the Commission before becoming effective.
13. Changes of status and salary must be submitted to and approved by the Commission before becoming effective.

REMOVAL OF INCOMPETENTS. NOT RESTRICTED.

The Civil Service Act provides for six months' probationary service for any and all certified eligibles. When a department head retains a competitive appointee in service beyond that period he acknowledges by that retention the fitness of such appointee. The examinations of the Civil Service Commission are prepared and conducted for the purpose of selecting the employees best adapted for state service, but no examination, however thorough—scientifically or psychologically—can always reveal personal or temperamental unfitness of an applicant, and hence the wise provision of a six months' probationary service. The department head, in the absence of civil service regulations, and the private employer must take his employee on trial. If he selects such employee or retains him because of friendship or influence or favoritism, then he is not fair to his state or to his business. This being admitted, it must follow that the appointing power, which selects an employee from an eligible list, has the same opportunity to determine the fitness of the employee for the position as he would have in the absence of an eligible list. With every appointee under six months' probation before becoming a permanent civil service employee, there is ample time to discover any defects in such employee, and it is the duty of the appointing power not alone to supervise his employees during their probationary period, but also thereafter, as long as the employee continues his employment under that appointing power. The head of a department has full control over his employees. If they are inefficient or incompetent he can suspend them or dismiss them, the only modification of this power being that he must give them opportunity to answer the charges he must make and to be heard on such charges. The merit system is not responsible for the retention of incompetent employees; rather does it insist upon and provide for the elimination of such employees as demonstrate their unfitness, and the responsibility for the retention of an incompetent employee must be borne by the head of the department which that employee serves.

PENSION AND RETIREMENT.

In its 1922 biennial report this Commission referred to the pressing need for legislation providing for the pension and retirement of aged employees. Civil service and the merit system can not continue to function efficiently unless some such legislation be enacted. Civil service has been in existence for eleven years. Employees in the employ of the state at the time of its adoption were "blanketed into" the service. Many of the employees were then well along in years. Each succeeding year makes it more difficult to secure the maximum of efficiency from these aged employees. Unfortunately, there comes a time in the lives of men when they are not able to give the service required of them and which can be given by men younger and more physically able. These aged employees have all the rights which civil service gives them and they can only be removed by resignation or by the filing of charges. While efficiency may demand such action, there is a sentimental side which deters it. Efforts have been made in the past to secure passage by the legislature of an adequate pension and retirement system for state employees, but these efforts have failed.

Various municipalities have adopted liberal and effective pension and retirement legislation for members of the police and fire departments. The same arguments which have been presented in the interests of a liberal pension and retirement policy for public school teachers and for members of the police and fire departments in the municipalities apply with equal force to the rank and file of the state service. It is just as important that some adequate provision be made for the retirement of a clerk or technical employee grown old in the service as for any other public employee, and the early adoption of a comprehensive pension and retirement system is recommended. The adoption of such a policy on the part of the state for all public employees will be in keeping with the spirit of progressive government. It will not be expensive to maintain if established in accordance with correct principles, and will be of great value in promoting efficiency in the public service.

FOR GREATER EFFICIENCY AND ECONOMY.

The Civil Service Commission has no province nor is it concerned in the organization, administration or policy-fixing powers of any other department. It is concerned, however, in the policy of "like salaries for like duties" and it now respectfully recommends that steps be taken to establish a system whereby there may be uniformity of hours and duties.

The surveys which have been made by this Commission for the purpose of establishing new classifications and standardizing salaries, have demonstrated that there is duplication of work and of effort. It is imperative, if the state is to reduce its great expenditures, that the work of each department be accomplished with a minimum number of employees, and to that end the Civil Service Commission, because of information at hand and because of its survey of departments, is ready to offer cooperation and suggestion.

There is no good reason for the exemption from civil service of a large proportion of the civilian employees of the state. It has been shown that the merit system, with its classification of positions, its standardization of salaries and its certification of pay rolls, is working a financial saving to the state. Civil service is no longer an experiment in California. There is no longer a question as to the value of the application of the merit system to public employment control and this Commission believes that the civil service system should be extended to include, with some few exceptions, those departments which are now exempt under the laws by which they have been created, or which are exempt under the civil service law. The exceptions referred to would properly include the State University and normal schools and the public school system of the state.

In view of the need for economy in all branches of the public service the Commission recommends for your consideration the adoption of appropriate legislation which will include legislative employees under the classified service. The states of Wisconsin and New York have adopted such legislation. Wisconsin adopted the merit system for the selection of legislative employees several years ago, and as a result, the cost of such employees has been reduced to a figure far below that of any other state of similar size and importance.

NATIONAL CIVIL SERVICE ASSEMBLY.

The eighteenth annual convention of the National Civil Service Assembly will be held in Los Angeles, California, May 26 to 29, 1925, inclusive. It will be attended by delegates from all civil service jurisdictions in the United States, Canada, The Philippines, and probably England and the continent of Europe. California has been recognized not alone by the selection of Los Angeles as the convention city, but also by having the president of its State Civil Service Commission selected as president of the National Assembly.

The great objective of the National Assembly for a number of years past has been the organization of a central civil service bureau, to act as a clearing house for civil service procedure, to the end that every state, county and municipal commission in the United States may have the benefit of the best thought and most improved practice in handling the many problems that arise. The committee appointed for the purpose has elicited the interest and support of the ablest scientific thinkers of the nation as well as one of the foremost philanthropists of the day and has recently announced that the sum of \$75,000 has been provided for a period of three years to cover every detail of investigation into civil service methods and procedure. Every civil service commission now in existence will directly benefit as a result of this great work and the merit system will be placed upon a more substantial basis than ever before in its history. It is respectfully urged that this Commission be provided funds to insure attendance and participation in the proceedings of the assembly convention and as well to retain its membership in the assembly.

RECOMMENDATIONS.

The annual pay roll of the State of California represents the greatest outlay of funds of the state, and inasmuch as the Civil Service Commission, in the discharge of its duties, is most intimately concerned with the content of that pay roll, it has tried to present with this report a brief review of its activities in connection with the state service. Through legislative enactment and through the cooperation and support of the Governor, the merit system has already advanced to a very gratifying degree in California, and it is with a desire to still further develop and perfect the system that the following recommendations and suggestions are made:

1. The extension of the civil service system to exempted departments of the state.
2. A survey of the departmental working forces that there may be a reorganization of such departments, where deemed advisable, to the end that there may be a minimum number of employees.
3. The adoption of a comprehensive and equitable pension and retirement system for civil service employees.
4. The inclusion of the civil service system as a part of the organic law of the state.
5. A careful analysis of all estimates for personal service by the budget officers, to the end that unequal statutory salaries may be eliminated and that all appropriations for salary and wage purposes may be based on the schedules adopted by the Civil Service Commission.
6. The placing of all legislative employees in the classified service.

CONCLUSION.

The State of California is the employer of one of the largest groups of individuals in the state and as such it has a right to demand of its employees the maximum of service and efficiency in the discharge of public business at a minimum expense. It is only when merit and fitness are made the basis for the selection of employees, as well as for their continuation and promotion in the service, that the state can be assured of the type of intelligent service to which it is entitled.

The present Civil Service Commission, all three members of which have served during your two years of office, desires in concluding this report to express its sincere appreciation of your hearty cooperation and support, and to officially record that never during your administration have you even suggested any deviation from a strict observance of the Civil Service Law.

Respectfully submitted.

STATE CIVIL SERVICE COMMISSION,

DAVID J. REESE,

President and Executive Member,

JOHN F. GALVIN,

CECILIA M. CHAMBERLAIN,

Associate Members.

December 29, 1924.

APPENDIX III.

FINANCIAL STATEMENT.

Seventy-fourth and Seventy-fifth Fiscal Years.

| | Seventy-fourth fiscal year, 1922-1923 | Seventy-fifth fiscal year, 1923-1924 |
|---|---|--|
| Appropriation..... | \$43,590 00 | \$35,000 00 |
| Balance forward from seventy-third fiscal year..... | 654 06 | |
| Totals..... | \$44,244 06 | \$35,000 00 |
| Expenditures..... | 41,643 37 | 32,516 41 |
| Balances..... | \$2,600 69 | \$2,483 59 |

DISTRIBUTION OF EXPENDITURES.

| | Seventy-fourth fiscal year, 1922-1923 | Seventy-fifth fiscal year, 1923-1924 |
|---|---|--|
| Office salaries..... | \$26,811 42 | \$20,653 48 |
| Commissioners' salaries..... | 4,220 00 | 4,400 00 |
| Sacramento office, incidental expenses..... | 229 72 | 242 66 |
| Los Angeles office and rental..... | 600 00 | 600 00 |
| Traveling (administrative and examination)..... | 3,206 84 | 3,186 24 |
| Materials and supplies..... | 674 43 | 421 23 |
| Printing..... | 2,205 15 | 1,165 80 |
| Postage..... | 1,959 27 | 1,082 16 |
| Telephone and telegraph..... | 738 24 | 448 64 |
| Examination and classification expense..... | 514 90 | 237 91 |
| Property and equipment..... | 483 40 | 78 29 |
| Totals..... | \$41,643 37 | \$32,516 41 |

Distribution of Expenditures, Showing the Relative Amount Spent for Salaries and Other Expenses.

| | Seventy-fourth fiscal year, 1922-1923 | | | Seventy-fifth fiscal year, 1923-1924 | | |
|------------------------------|--|------------------|-------------------|---|------------------|-------------------|
| | Em- ployees | Annual salary | Other expenses | Em- ployees | Annual salary | Other expenses |
| Administration division..... | 10 | \$14,713 31 | \$8,890 96 | 9 | \$13,577 92 | \$5,741 33 |
| Examination division..... | 8 | 16,318 11 | 1,720 99 | 5 | 11,475 56 | 1,721 60 |
| Totals..... | 18 | \$31,031 42 | \$10,611 95 | 14 | \$25,053 48 | \$7,462 93 |

APPENDIX IV.

LIST OF PERSONS WHO ASSISTED IN CONDUCTING EXAMINATIONS
DURING THE BIENNIAL PERIOD 1922-1924.

In the fourteen services or main classes of work into which the civil service classification is divided, there are between six and seven hundred subclasses or positions. This means that in order to recruit employees for the varied governmental activities of the State of California the Civil Service Commission must, as the needs of the service require, hold examinations for more than six hundred different kinds of positions, each of which is distinct from the others and requires the preparation of special questions and the assistance of special examiners. Many of the professions and trades for which examinations are given are so highly specialized and diversified in character that obviously the Commission could not, in justice to itself or to the service, attempt to conduct so many examinations unaided. Therefore, in order to meet the situation adequately, the Commission has followed the policy of appointing as special examiners experts in the various fields of activity for which examinations have been given. The cordiality and generosity with which these busy men and women from the technical, professional and business world have given their time to this important public service have been a source of gratification to the Commission. We, therefore, take this opportunity to make public acknowledgment of this service, and to express our gratitude to those who have so generously contributed gratuitously of their time and abilities.

For convenience of reference, the names of these examiners have been arranged by groups in accordance with the fields of work for which they rendered service.

ACCOUNTANT.

C. L. Avery, accountant, Los Angeles; John Cummings, accountant, San Francisco; C. DeSaules, city comptroller, Sacramento; J. F. Forbes, resident manager, Haskins & Sells, San Francisco; S. Gundelfinger, actuary, State Department of Insurance, San Francisco; F. F. Hahn, accountant, Haskins & Sells, San Francisco; S. G. Miles, Western Auto Supply Company, Los Angeles; W. K. Mitchell, accountant, Los Angeles; H. E. Nowell, accountant, Robinson, Bours & Nowell, San Francisco; Wm. Schleip, superintendent of accounts, State Board of Control, Sacramento; C. C. Staehling, accountant, Haskins & Sells, San Francisco.

AGENT, BOARD OF CHARITIES AND CORRECTIONS.

Kate Gordon, psychologist, Los Angeles; Margaret Lothrop, associate professor of Social Economics, Stanford University; F. C. Nelles, superintendent of Whittier State School, Whittier; Eugenia Schenk, Widows' Pension Bureau, San Francisco; Elizabeth Skeele, instructor in Sociology, University of Southern California.

AGENT, SPECIAL, INDUSTRIAL WELFARE COMMISSION.

Elizabeth Owen, Mills College, Oakland; John Steven, secretary and chief examiner, Los Angeles County Civil Service Commission, Los Angeles; Paul S. Taylor, assistant in Economics, University of California, Berkeley.

AGRICULTURE, POSITIONS IN STATE DEPARTMENT OF. (Positions dealing with Chemistry, Cattle Brand Inspection, Dairy Inspection, Entomology, Fruit and Vegetable Standardization, Grain and Warehouse Inspection, Plant Pathology, Quarantine Inspection, Seed Inspection, Veterinary Science, Viticulture, Weights and Measures, Zoology.)

G. L. Baxter, chief testing engineer, Southern Pacific Railroad Company, Sacramento; T. D. Beckwith, assistant professor of Pathology, University of California, Berkeley; W. L. Beedy, Sperry Flour Company, San Francisco; Dr. H. C. Bryant, in charge of Education, Publicity and Research, Fish and Game Commission, Berkeley; H. E. Burke, Forest Insect Laboratory, Stanford University; Dr. J. P. Bushong, veterinarian, Los Angeles; George E. Colby, assistant chemist, Department of Agriculture, Sacramento; G. A. Clough, attorney, San Francisco; Professor J. F. Duggar, University Farm, Davis; E. O. Essig, assistant professor of Entomology, University

of California, Berkeley; J. D. Fisher, Los Angeles; C. M. Fuller, Los Angeles; J. W. Filmore, professor of Agronomy, University of California, Berkeley; S. H. Green, secretary and manager, California Dairy Council, San Francisco; Dr. Joseph Grinnell, professor of Zoology and director of Museum of Vertebrate Zoology, University of California, Berkeley; E. H. Haack, manager, Central California Berry Growers' Association, San Francisco; R. M. Hagen, secretary, California Cattlemen's Association, San Francisco; C. M. Haring, professor of Veterinary Science and director of Agricultural Experiment Station, University of California, Berkeley; G. H. Hart, associate professor of Veterinary Science, University of California, Berkeley; H. H. Hicks, inspector in charge of United States Bureau of Animal Industry, San Francisco; W. T. Horne, associate professor of Plant Pathology, University of California, Berkeley; R. E. James, Mebius & Drescher, Sacramento; S. F. Kennedy, Riverside Dairy Company, Riverside; C. H. McCharles, director, Food and Drug Laboratory, University of California, Berkeley; J. F. Mackenzie, San Francisco; E. D. McSweeney, president, California Certified Seed Potato Growers' Association, El Monte; W. H. Nixon, C. C. Morse Seed Company, San Carlos; Dr. M. J. O'Rourke, veterinarian, San Francisco; T. M. Pierce, inspector, Division of Chemistry, Department of Agriculture, Sacramento; H. J. Quayle, Citrus Experiment Station, Riverside; C. L. Roadhouse, professor of Dairy Industry, University Farm, Davis; Dr. M. Rosenberger, superintendent of Adohr Stock Farms, Van Nuys; Hubbard Russell, cattleman, Los Angeles; H. J. Ryan, horticultural commissioner, Los Angeles County; E. M. Sheehan, president of Grape Growers' Exchange, San Francisco; E. K. Strobbridge, company sealer, Oakland; F. T. Swett, president of California Pear Growers' Association, San Francisco; R. H. Taylor, secretary of Agricultural Legislative Commission, Sacramento; P. W. Tompkins, Curtis & Tompkins, San Francisco; H. F. Truax, broker, Wholesale Terminal Building, Los Angeles; H. H. Warner, American Fruit Growers, Incorporated, Pasadena; G. P. Weldon, professor of Horticulture, Chaffey Junior College, Ontario; C. P. Wilson, California Fruit Growers' Exchange, San Dimas.

BANK EXAMINER.

V. M. Alvord, First National Bank, San Francisco; W. B. Bakewell, Mercantile Trust Company, San Francisco; G. A. Belcher, San Francisco Savings and Loan Society, San Francisco; M. C. Bolts, cashier, Sacramento branch, Bank of Italy; L. W. Craig, Security Trust and Savings Bank, Los Angeles; A. Denton, bank examiner, San Francisco; G. R. Kingdon, First National Bank, Los Angeles; H. B. Raney, Pacific-Southwest Trust and Savings Bank, Los Angeles; J. H. Stephens, president, Merchants National Bank, Sacramento; S. G. Sucher, Los Angeles Clearing House, Los Angeles; O. Thompson, Pacific-Southwest Trust and Savings Bank, Los Angeles; C. B. Wingate, chief examiner, State Banking Department, San Francisco.

COMPENSATION INSURANCE FUND. POSITIONS IN STATE. (Superintendent of Claims, Claim Investigator, Claim Examiner, Pay Roll Auditor, Special Agent, Safety Engineer, Medical Director, etc.)

S. H. Beckett, examiner, State Insurance Department, San Francisco; W. A. Chowen, manager, California Inspection Rating Bureau, San Francisco; John Cummings, accountant, San Francisco; J. M. Dodd, San Francisco; C. E. Ege, insurance broker, Los Angeles; F. W. Fellows, assistant secretary, Industrial Accident Commission, Los Angeles; A. B. Harris, referee, Industrial Accident Commission, Los Angeles; D. H. Hauschildt, Los Angeles; F. J. McGee, McCarthy & McGee, Sacramento; Victor Montgomery, insurance broker, Los Angeles; A. W. Mowbray, associate professor of Insurance, University of California, Berkeley; W. P. Ratliff, secretary and manager, Self Insurance Department, Industrial Accident Commission, San Francisco; H. F. Risbrough, assistant to Insurance Commissioner, Los Angeles.

CORPORATION DEPARTMENT. POSITIONS IN. (Examiner, Deputy, Auditor, Grade 4.)

W. D. Abel, assistant mining engineer, State Corporation Department, Los Angeles; F. F. Atkinson, attorney, Sacramento; C. L. Avery, accountant, Los Angeles; J. P. Beale, attorney, San Francisco; D. G. Bowker, attorney, Ventura; H. J. Brown, attorney, San Francisco; J. L. Davis, executive secretary, State Corporation Department, Sacramento; C. DeSaules, city comptroller, Sacramento; R. T. Devlin, attorney, Sacramento; C. J. Elkus, attorney, San Francisco; G. E. Farrand, attorney, Los Angeles; A. G. Fickeisen, attorney, Los Angeles; R. C. Foerster, attorney, San Francisco; D. P. Goodwin, attorney, Los Angeles; Charles A. Jones, Los Angeles; Harry W. Moore, certified public accountant, Los Angeles; Richard North, attorney, Los Angeles; Wm. Schleip, superintendent of accounts, State Board of Control, Sacramento; J. C. Stanton, Bradstreet Mercantile Agency, San Francisco.

DEPUTY, REAL ESTATE DEPARTMENT.

C. A. Adams, attorney, San Francisco; W. H. Akin, real estate, Los Angeles; G. C. Boardman, real estate, San Francisco; W. L. Brent, real estate, Los Angeles; E. J. Hughes, attorney, Sacramento; A. C. Hurt, attorney, Los Angeles; Emil Kahn, real estate, San Francisco; E. T. Keiser, commissioner, State Real Estate Department, Los Angeles; W. S. Kingsbury, surveyor-general of State of California, Sacramento; D. McGarry, real estate, Los Angeles; John McGaw, real estate, San Francisco; O. A. Vickrey, real estate, Los Angeles; H. S. Wanzer, Capitol Building and Loan Association, Sacramento.

EDITOR, TECHNICAL, HIGHWAY ENGINEERING.

N. A. Bowers, Pacific coast editor, McGraw-Hill Company, San Francisco; A. B. Fletcher, consulting highway engineer, Washington, D. C.; R. M. Morton, highway engineer, California Highway Commission, Sacramento; T. E. Stanton, assistant

highway engineer, California Highway Commission, Sacramento; C. B. Wing, professor of Civil Engineering, Stanford University.

ENGINEERING POSITIONS, ARCHITECTURAL.

M. M. Bruce, architect, San Francisco; J. S. Dean, architect, Sacramento; A. J. Wagner, city engineer, Sacramento; C. B. Wing, professor of Civil Engineering, Stanford University.

ENGINEERING POSITIONS, BRIDGE. (Associate Bridge Engineer, Grade 5; Associate Bridge Engineer, Grade 5, promotional.)

M. M. Bruce, architect, San Francisco; B. C. Gerwick, chief engineer, Healy-Tibbetts Construction Company, San Francisco; F. H. Joyner, consulting engineer, Los Angeles; E. J. Schneider, structural engineer, United States Steel Products, San Francisco; C. H. Schneider, Schneider, Chappell & Jones, Sacramento; J. H. Skeggs, division engineer, California Highway Commission, San Francisco; T. E. Stanton, assistant highway engineer, California Highway Commission, Sacramento; A. J. Wagner, city engineer, Sacramento; H. E. Warrington, consulting bridge engineer, San Francisco; C. B. Wing, professor of Civil Engineering, Stanford University.

ENGINEERING POSITIONS, CIVIL. (Civil Engineer, Grades 1, 2, 3, 4; Civil Engineering Draftsman, Grades 1, 2, 3, 4; Delineator.)

T. A. Bedford, division engineer, California Highway Commission, Willits; J. S. Bright, United States Bureau of Public Roads, San Francisco; Perry Brown, city engineer, Fresno; E. Dagner, The White Company, San Francisco; B. A. Etch-
every, professor of Hydraulic Engineering, University of California, Berkeley; A. B. Fletcher, consulting highway engineer, Washington, D. C.; W. N. Frickstadt, United States Bureau of Public Roads, San Francisco; H. Hawgood, civil engineer, Los Angeles; F. C. Hermann, consulting engineer, San Francisco; L. I. Hewes, district engineer, United States Bureau of Public Roads, Los Angeles; F. H. Joyner, consulting engineer, Los Angeles; Mr. Morris, resident engineer, Mendocino Light and Power Company, Willits; R. M. Morton, highway engineer, California Highway Commission, Sacramento; Emery Oliver, general manager, Natomas Company, Sacramento; J. H. Skeggs, division engineer, California Highway Commission, San Francisco; E. Smith, deputy county engineer, Fresno; T. E. Stanton, assistant highway engineer, California Highway Commission, Sacramento; Mr. Taft, manager, Wagner Garage, Willits; A. J. Wagner, city engineer, Sacramento; C. B. Wing, professor of Civil Engineering, Stanford University; J. B. Woodson, division engineer, California Highway Commission, Fresno.

ENGINEERING POSITIONS, HIGHWAY. (Highway Engineer, Grade 6; Associate Highway Engineer, Grade 5; Associate Highway Engineer, Grade 5, promotional.)

J. S. Bright, United States Bureau of Public Roads, San Francisco; C. C. Cot-trell, United States Bureau of Good Roads, San Francisco; E. Dagner, The White Company, San Francisco; A. B. Fletcher, consulting highway engineer, Washington, D. C.; L. I. Hewes, district engineer, United States Bureau of Public Roads, San Francisco; A. E. Loder, manager, Good Roads Bureau, California State Auto Asso-ciation, San Francisco; R. M. Morton, highway engineer, California Highway Com-mission, Sacramento; Emery Oliver, general manager, Natomas Company, Sacra-mento; T. E. Stanton, assistant highway engineer, California Highway Commission, Sacramento; C. B. Wing, professor of Civil Engineering, Stanford University.

ENGINEERING POSITIONS, MECHANICAL. (Assistant Mechanical Engineer, Grade 4; Mechanical Engineering Draftsman, Grade 3; Assistant Mechanical Engineer-ing Draftsman, Grade 2.)

L. D. Burlingame, district mechanical engineer, Pacific Gas and Electric Company, Sacramento; L. B. Luppen, consulting mechanical engineer and contractor, Sacra-mento; J. O. Tobey, district engineer, Pacific Gas and Electric Company, Sacra-mento.

ENGINEERING POSITIONS, SAFETY. (Associate Electrical Safety Engineer, Grade 5, Promotional; Assistant Structural Safety Engineer, Grade 4, Promotional; Mechanical Safety Engineer, Grades 3 and 4.)

W. A. Chown, manager, California Inspection Rating Bureau, San Francisco; E. S. Cobb, consulting engineer, Los Angeles; E. B. Lefferts, manager, Public Safety Department, Automobile Club of Southern California, Los Angeles; A. H. Mark-wart, chief engineer, Pacific Gas and Electric Company, San Francisco; H. P. Phillips, secretary, San Francisco Chapter of American Society of Mechanical Engi-neers, San Francisco; C. H. Snyder, consulting engineer, San Francisco.

ENGINEERING POSITIONS, SANITARY. (Assistant Sanitary Engineer, Grade 4; Junior Sanitary Engineer, Grade 3; Sanitary Engineering Aid, Grade 2.)

A. L. Fales, district engineer, United States Public Health Service, Boston; C. G. Gillespie, director, Bureau of Sanitary Engineering, State Board of Health, Berke-ley; W. S. Hommon, district engineer, United States Public Health Service, San Francisco; H. E. Tarbett, district engineer, United States Public Health Service, El Paso, Texas.

FORESTRY, STATE BOARD OF, POSITIONS IN. (Inspector, Promotional; District Fire Ranger; Nurseryman, Grades 2 and 3.)

R. L. P. Bigelow, United States Forest Service, Los Angeles; F. C. Brosius, super-
vising quarantine officer, State Department of Agriculture, Sacramento; R. H. Charlton, supervisor, Angeles National Forest, Los Angeles; S. J. Flinham, forester

of Los Angeles County, Los Angeles; J. R. Hall, forest supervisor, Sisson; C. E. Jordan, forest supervisor, Santa Barbara; M. B. Pratt, state forester, Sacramento; Wm. Vortriede, state landscape gardener, State Capitol, Sacramento.

HEALTH, STATE BOARD OF, POSITIONS IN. (Director, Bureau of Child Hygiene; Public Health Nurse; Epidemiologist; Field Worker, Bureau of Tuberculosis.)

Dr. Olga Bridgman, psychologist, San Francisco; Dr. C. C. Browning, physician, Los Angeles; Dr. G. J. Hall, city health officer, Sacramento; Anna Jammie, director, Bureau of Registration of Nurses, State Board of Health, San Francisco; Dr. F. L. Kelly, Health Department, Berkeley; Dr. W. P. Lucas, University of California Hospital, San Francisco; Anastasia Miller, nurse, Sacramento Red Cross; J. C. Perry, United States Public Health Service, San Francisco; Dr. Eva C. Reid, physician, University of California Hospital, San Francisco; Dr. J. W. Robinson, Los Angeles; Dr. Esther Rosencrantz, City and County Hospital, San Francisco; Dr. Gladys Shahovitch, deputy county health officer, Los Angeles; Lillian Simpson, supervisor nurse, Los Angeles County; Dr. H. R. Stolz, supervisor of Physical Education, State Board of Education, Sacramento; Dr. A. H. Sutherland, school psychologist, Los Angeles School Department; Agnes Talcott, nurse, Los Angeles Health Department; Mrs. E. Tate Thompson, director, Bureau of Tuberculosis, State Board of Health, Sacramento; Dr. N. E. Wayson, San Francisco.

IMMIGRATION AND HOUSING, POSITIONS IN COMMISSION OF. (Director of Housing; Housing Inspector, Grade 2; Complaint Officer, Grade 2; Complaint Officer, Grade 2, Promotional.)

Dr. W. M. Dickie, secretary, State Board of Health, Sacramento; A. E. Graupner, attorney, San Francisco; S. C. May, professor of Municipal Government, University of California, Berkeley; S. Schnaittacher, secretary, State Board of Architecture, San Francisco; W. C. Sharpsteen, attorney, San Francisco; T. C. West, attorney, San Francisco; C. Gordon Whitnall, City Planning Commission, Los Angeles.

INDUSTRIAL ACCIDENT COMMISSION, POSITIONS IN. (Referee; Decision Writer; Elevator Inspector.)

D. W. Burbank, attorney, San Francisco; L. J. Clarke, attorney, Los Angeles; H. W. Fessenden, Otis Elevator Company, San Francisco; W. J. French, executive secretary, California Society for the Blind, San Francisco; A. E. Graupner, attorney, San Francisco; Thomas Hamilton, Los Angeles; W. I. Morrison, attorney, Los Angeles; R. P. Wisecarver, attorney, San Francisco.

INSTITUTIONS, POSITIONS AT STATE. (Business Manager; Dietitian; Storekeeper; Supervisor; Matron; Surgical Nurse; Etc.)

W. J. Duddleson, head of Agriculture Department, California Polytechnic School, San Luis Obispo; E. C. Horst, E. C. Horst Company, West Sacramento; A. G. Geagle, business manager, Stockton State Hospital, Stockton; M. N. Kimball, Kimball-Upson Company, Sacramento; G. C. Kreutzer, United States Reclamation Service, Washington, D. C.; N. R. Martin, Southern California Loan Association, Los Angeles; F. E. Mason, business manager, Mendocino State Hospital, Talmage; F. C. Nelles, superintendent, Whittier State School, Whittier.

LABOR STATISTICS, POSITIONS IN BUREAU OF. (Agent; Deputy Labor Commissioner; Employment Manager; Placement Clerk.)

G. C. Bell, attorney, San Francisco; J. A. Burton, contractor, Los Angeles; W. G. Mathewson, commissioner, Bureau of Labor Statistics, San Francisco; Mrs. R. M. Moran, secretary, City Civil Service Commission, San Diego; Dr. P. S. Taylor, Department of Economics, University of California, Berkeley.

MINERALOGIST, DEPUTY STATE. (Promotional.)

B. O. Pickard, United States Bureau of Mines, Berkeley; R. E. Tremoureux, San Francisco.

OFFICE SERVICE POSITIONS. (Principal Stock Clerk; Stock Clerk; Principal Clerk, Promotional; Chief Clerk; Deputy Court Clerk; Cashier, Promotional; Senior Credential Clerk; Stenographer; Typist; Bookkeeper; Addressograph Operator; Hollerith Tabulating Machine Operator; Hollerith Key Punch Operator; Clerical Aid; Telephone Operator.)

C. K. Aldrich, Architectural Service Bureau, Los Angeles; J. F. Bowers, Fresno; P. W. Brown, assistant examiner, Los Angeles County Civil Service Commission, Los Angeles; V. C. Cole, H. S. Crocker Company, Fresno; E. V. Curley, principal accountant, State Board of Control, Sacramento; Alice Davies, school supervisor, Pacific Telephone and Telegraph Company, Sacramento; C. DeSaules, city comptroller, Sacramento; Annie Durkee, teacher, Fresno High School; G. F. Gairing, deputy superintendent of schools, Los Angeles; T. M. Gannon, legislative counsel, Sacramento; D. Greatrix, Los Angeles County; S. Gundelfinger, actuary, Department of Insurance, San Francisco; Miss H. E. Hart, supervisor, P. E. X. Service, Pacific Telephone and Telegraph Company, San Francisco; A. L. Johnson, attorney, Bureau of Labor Statistics, San Francisco; L. A. Lampton, county clerk and clerk of superior court, Los Angeles; W. G. McMillin, state purchasing agent, Sacramento; Mrs. R. M. Moran, secretary, City Civil Service Commission, San Diego; P. B. Potter, accountant, State Board of Control, Sacramento; C. F. Prentiss, manager, Thompson-Diggs Company, Sacramento; L. E. Ross, registrar, State Board of Health, San Francisco; R. H. Stalnaker, assistant highway engineer, California Highway Commission, Sacramento.

PHYSICIAN. FIRST ASSISTANT.

M. C. Barton, county superintendent of schools, Greenville, South Carolina; Dr. M. G. Carter, physician, Los Angeles; J. H. Donahue, assistant secretary, Cook County Civil Service Commission, Chicago, Illinois; F. J. Gertz, superintendent, Psychopathic Hospital, Chicago, Illinois; Clarence Neyman, assistant professor of Psychiatry, North Western Medical School, Chicago, Illinois; Dr. Nixon, physician, University of California Hospital, San Francisco; Dr. Eva C. Reid, physician, University of California Hospital, San Francisco.

PUBLIC INSTRUCTION. ASSISTANT SUPERINTENDENT OF.

C. A. Adams, attorney, San Francisco; E. M. Cox, assistant superintendent of schools, Oakland; J. M. Gwinn, superintendent of schools, San Francisco.

PURCHASING DEPARTMENT. POSITIONS IN. (Chief Assistant Purchasing Agent, Grade 5, Promotional; General Buyer, Grade 4, Promotional.)

H. B. Drescher, Mebius & Drescher Company, Sacramento; J. J. Haley, Jr., assistant to chief, Division of Engineering and Irrigation, State Department of Public Works, Sacramento; E. F. Holcomb, manager, H. S. Crocker Company, Sacramento; E. M. Krehbiel, Weinstock-Lubin Company, Sacramento.

SCHOOLS. POSITIONS AT CORRECTIONAL. (Group Supervisor; Farm Manager; Housefather; Housemother.)

O. H. Close, superintendent, Preston School of Industry, Waterman; D. T. Harriman, Los Angeles; L. S. Howard, Whittier; F. C. Nelles, superintendent, Whittier State School, Whittier; W. A. Smith, assistant superintendent and business manager, Whittier State School, Whittier.

TRADES, AUTOMOTIVE, BUILDING AND ALLIED. (Auto Mechanics; Truckdriver; General Mechanic; Machinist; Building Operation and Maintenance.)

E. S. Anderson, superintendent of equipment, California Highway Commission, Fresno; T. J. Bennett, McDonald & Kahn, San Francisco; C. A. Berry, Buick Auto Agency, Los Angeles; E. W. Book, contractor, Sacramento; C. E. Brown, California Highway Commission, Los Angeles; Emil Brown, plumbing contractor, Los Angeles; F. E. Burnside, general superintendent of maintenance and equipment, California Highway Commission Shops, Sacramento; W. B. Cannon, superintendent of equipment, California Highway Commission Shops, Lankershim; E. Dixon, Edmonds, Wiley & Dixon Company, Los Angeles; J. C. Duncan, contractor, Los Angeles; A. A. Ford, superintendent of equipment, California Highway Commission Shops, Redding; J. S. Gould, contractor, San Francisco; J. W. Grace, superintendent of equipment, California Highway Commission, Willits; E. M. Hart, Pacific Gas and Electric Company, Sacramento; H. H. Hilp, Barrett & Hilp, contractors, San Francisco; J. H. Hollister, assistant resident engineer, California Highway Commission, San Luis Obispo; R. E. Homans, construction engineer, Los Angeles; F. N. Killam, superintendent of Capitol Building and Grounds, Sacramento; M. F. McKenzie, contractor, Sacramento; M. Mealey, Mealey & Collins, contractors, San Francisco; James Patillo, plumbing contractor, Los Angeles; J. H. Pinkerton, plumbing contractor, San Francisco; W. K. Potts, associate mechanical engineer, Division of Architecture, State Department of Public Works, Sacramento; J. F. Provos, manager, Neal Company, San Francisco; J. C. Smith, automobile agent, San Bernardino; W. A. Smith, superintendent of equipment, California Highway Commission, San Francisco; H. C. Snead, Snead & Company, San Francisco; C. H. Schneider, Schneider, Chappell & Jones, Sacramento; R. C. Spilsbury, Newbury Electric Corporation, Los Angeles; T. E. Stanton, assistant state highway engineer, California Highway Commission, Sacramento.

TRADES, HIGHWAY CONSTRUCTION. (Maintenance and Repair; Mechanical Equipment.)

M. E. Beck, Fulton Iron Works, Los Angeles; J. C. Clark, assistant superintendent of auto equipment, Standard Oil Company, San Francisco; O. R. Cole, supervisor of auto equipment, Pacific Telephone and Telegraph Company, San Francisco; R. N. Corey, inspector, Ford Motor Company, Los Angeles; E. Essner, superintendent of yards and docks, Bethlehem Ship Building Corporation, San Francisco; W. R. Forker, general manager, Moreland Truck Company, Los Angeles; C. E. Kemper, Atterbury & Kemper, Los Angeles; S. H. Palmer, Palmer & McBryde, San Francisco; R. H. Stalnaker, assistant highway engineer, California Highway Commission, Sacramento; H. C. Venter, superintendent, Southern Pacific Shops, Sacramento.

TRADES. MARINE.

Captain F. M. Edwards, port superintendent, Matson Navigation Company, San Francisco; M. R. Hickman, port engineer, Matson Navigation Company, San Francisco; F. N. Killam, superintendent of Capitol Building and Grounds, Sacramento; P. N. Nelson, superintendent of Bridges and Buildings, Southern Pacific Company, San Francisco.

TRADES, PRINTING. (Job Pressman; Bookbinder; Bindery Worker; Assistant Foreman of Pressroom; General Foreman of Composing Room; Forelady of the Bindery.)

R. M. Bahls, Althof & Bahls, San Francisco; E. Barry, E. Barry Company, San Francisco; A. P. Bell, Mirror Printing and Publishing Company, Los Angeles; C. J. Branham, Anderson Printing Company, Sacramento; W. C. Coughlan, superintendent, Schwabacher-Frey Company, San Francisco; J. W. Gee, Hapeman-Gee

Printing Company, Sacramento; N. W. Kellaway, printer, Los Angeles; W. F. McKannay, Independent Press, San Francisco; M. Matuskiwiz, Sacramento Typothetae, Sacramento; T. J. O'Leary, Cordoza Company, San Francisco; J. M. Welch, foreman, State Printing Office, Sacramento.

TRADES, RAILROAD. (Engineman; Locomotive Hoist; Locomotive Fireman; Switchman.)

F. E. Burnside, superintendent, California Highway Commission Shops, Sacramento; C. M. Perkins, examiner, Western Division, Southern Pacific Company, Oakland; W. E. Shafer, master mechanic, Belt Line Railroad, Board of State Harbor Commissioners, San Francisco; F. E. Stewart, San Francisco.

APPENDIX V.

THE CIVIL SERVICE ACT.

CHAPTER 590.

An act to provide for a general system, based upon investigation as to merit, efficiency and fitness, for appointment to and holding during good behavior of office and employment under state authority and, in that behalf, to create a state civil service commission, to prescribe its powers and duties, to make the wilful violation of the provisions of this act a misdemeanor, to repeal all acts and parts of acts inconsistent herewith in so far as they may be inconsistent with the provisions of this act, and to make an appropriation therefor. (Approved June 16, 1913. Amended May 27, 1919; May 30, 1921; June 1, 1921; and June 7, 1923.)

The people of the State of California do enact as follows:

SECTION 1. *First*—The term "commission" as used in this act means the "state civil service commission" herein created, and the term "commissioner" as used in this act means one of the three members of that commission, all unless such terms are plainly used with some other meaning.

Second—The term "position" and "positions" as used in this act include all offices and employments under state authority, whether there be any salary or other compensation or emolument connected therewith, except offices held by elective officers as such and also except the militia and all offices and employments as now or hereafter provided by virtue of or under Article VIII of the constitution of the state, and except county and township offices and employments.

Third—The term "appointing power" as used in this act includes all persons whether acting singly or in conjunction with others in any way whatsoever, either by nomination or confirmation or as a board or commission or otherwise, in selecting any one to hold any position as that term is so used in this act.

Fourth—The term "appointment" as used in this act includes all means of selecting and employing any one to hold any position as that term is so used in this act.

SEC. 2. There is hereby created a commission known as the "state civil service commission" which shall consist of three commissioners one of whom shall be the executive member and the other two shall be associate members, each of which members shall be appointed by the governor for the term of four years from the expiration of the respective terms of the members in office at the time this amendatory act takes effect. Vacancies shall be filled by appointments by the governor for the unexpired terms. Any commissioner may be removed by concurrent resolution of both houses of the legislature adopted by a two-thirds vote of each house. The member appointed to the position of executive member of said commission shall be ex officio president of the commission. He shall receive as compensation for his service the sum of four thousand dollars per annum and devote all his time to the duties of his office, which shall be maintained at the city of Sacramento. Each of the associate members of said commission shall receive as compensation for their services ten dollars per day while actually engaged in the duties of their office, not to exceed five hundred dollars each in any one year. All members of the commission shall receive their actual and necessary traveling expenses incurred in the performance of their duties. The total and items of all expenditures and obligations made, authorized and incurred by the commission shall not exceed the sums appropriated therefor by law. The names "commission" and "commissioners" as used in the act of which this is amendatory shall be construed to mean the executive head of the commission except that, in relation to the enactment of rules and regulations, the classifications and exemptions of places of employment and the dismissals from the public service, the votes of two members of the commission shall be necessary. In all other respects the duties, powers and functions now or hereafter conferred upon the civil service commission or commissioners are hereby vested in and conferred upon the executive member of said commission. (As amended statutes of 1921.)

SEC. 3. The commission shall employ a chief examiner and secretary, which offices may be combined, and such other employees as it may deem necessary or proper to carry out the purposes of this act. Their compensation shall be fixed by the commission, and they may be paid necessary traveling expenses incurred in the discharge of their duties. The duties of the chief examiner, secretary and other employees shall be prescribed by the commission, subject to the provisions of this act. It shall be the duty of the secretary to keep the minutes of the meetings of the commission and perform such other services as may be assigned him by the commission. The commission may select suitable persons to assist in examinations under its direction. The compensation of such assistants shall not exceed five dollars per day, except in the case of special and expert examiners employed in the preparation of questions and rating of candidates; and when the persons so selected are in the official service of the state it shall be deemed a part of their official duty to serve as such assistants without additional compensation.

SEC. 4. The commission is authorized to secure in the city of Sacramento suitable and convenient rooms and accommodations and cause the same to be furnished, heated and lighted, for carrying on the work of the commission and the commission may order the necessary stationery, postage stamps, and official seal and other articles to be supplied, and the necessary printing to be done for its official use.

SEC. 5. The commission shall:

First—Classify positions to be held under state authority in accordance with the provisions of this act and in accordance with the duties attached to such positions. The commission shall grade all positions within each class with respect to salaries, to the end that like salaries shall be paid for like duties, and shall establish minimum and maximum salary limits for each grade in its classification of positions, and shall provide by rule for advancement of salary within each grade on the basis of efficiency and length of service. Such classes and grades may from time to time be amended, added to, consolidated or abolished by the commission, but persons holding positions under the original classification or grade shall not be affected thereby. (As amended statutes of 1923.)

Second—Hold examinations to determine the merit, efficiency and fitness of applicants for positions, and prepare properly classified eligible lists from applicants so examined. All questions for examination shall be prepared under the supervision of the commission or chief examiner and delivered to the examining board or to the candidates by one of the commissioners or chief examiner or by an examiner specially designated to perform such service.

Third—Enforce the provisions of this act and prescribe, and enforce suitable rules and regulations for carrying the same into effect and from time to time amend and repeal the same.

Fourth—Keep minutes of its own proceedings and records of its examinations and other official actions.

Fifth—Records of individual efficiency of holders of positions in performing their duties shall be established in all offices and places of employment affected by this act. Such records shall be made by the appointing power, unless otherwise directed by the commission, and under and in accordance with such rules and regulations as the commission may prescribe, and a copy of such records shall be filed with the commission. The commission shall investigate all such efficiency records and may make its own records, and shall rate upon such records the item of "ascertained merit" in examinations for promotion. The commission shall establish and enforce rules and regulations under which records of unsatisfactory service may lead to reduction in grade and compensation of the person holding the position concerned, and shall further provide for the manner in which persons falling below the standards of efficiency fixed by its rules and regulations may be removed from their positions by the commission proceeding substantially as provided in this act and with the same effect as in case of removals by the appointing power.

Sixth—Make investigations concerning and report upon all matters touching the enforcement and effect of the provisions of this act and the rules and regulations prescribed thereunder; inspect all state institutions, offices, places of employment and services affected by this act, and ascertain whether this act and all such rules and regulations are obeyed. Such investigation may be made by any commissioner, or chief examiner, or by any other authorized agent of the commission. In the course of such investigation any commissioner, or chief examiner or such other authorized agent of the commission, or the secretary of the commission, shall have

power to administer oaths, subpoena and require the attendance in this state of witnesses and the production thereby of books, papers, documents and accounts appertaining to the investigation but not requiring the attendance of witnesses either with or without books, papers, documents or accounts unless residing within the same county or within thirty miles of the place of attendance.

Serenth—All hearings and investigations before the commission, or any commissioner, or the chief examiner or such other authorized agent of the commission shall be governed by this act and by rules of practice and procedure to be adopted by the commission, and in the conduct thereof neither the commission, nor any commissioner, nor the chief examiner nor such other authorized agent of the commission shall be bound by the technical rules of evidence. No informality in any proceeding or in the manner of taking testimony before the commission or any commissioner, or the chief examiner or such other authorized agent of the commission shall invalidate any order, decision, rule or regulation made, approved or confirmed by the commission. The superior court in and for the county, or city and county, in which any inquiry, investigation, hearing or proceeding may be held by the commission, or any commissioner, or the chief examiner or such other authorized agent of the commission shall have the power to compel the attendance of witnesses, the giving of testimony and the production of books, papers, documents and accounts, as required by any subpoena issued by the commission, or any commissioner, or such other authorized agent of the commission or the secretary. The commission, or the commissioner, or the chief examiner or such other authorized agent of the commission before whom the testimony is to be given or produced, in case of the refusal of any witness to attend or testify or produce any papers required by such subpoena, may report to the superior court in and for the county, or city and county, in which the proceeding is pending, by petition, setting forth that due notice has been given of the time and place of attendance of said witness, or the production of such books, papers, documents or accounts, and that the witness has been summoned in the manner prescribed in this act, and that the witness has failed and refused to attend or produce such books or papers or documents or accounts required by the subpoena, before the commission, or the commissioner, or the chief examiner or such other authorized agent of the commission, in the matter named in the notice and subpoena, or has refused to answer questions propounded to him in the course of such proceeding, and ask an order of said court, compelling the witness to attend and testify or produce such books or papers or documents or accounts before the commission, or any commissioner, or the chief examiner or such other authorized agent of the commission. The court, upon the petition of the commission, or any commissioner, or the chief examiner or such other authorized agent of the commission, shall enter an order directing the witness to appear before the court at a time and place to be fixed by the court in such order, the time to be not more than ten days from the date of the order, and then and there show cause why he has not attended and testified or produced said papers before the commission, or such commissioner, or the chief examiner or such other authorized agent of the commission. A copy of said order shall be served upon said witness. If it shall appear to the court that said subpoena was regularly issued by the commission, or any commissioner, or the chief examiner or other authorized agent of the commission or the secretary, the court shall thereupon enter an order that said witness appear before the commission, or such commissioner, or the chief examiner or any other authorized agent of the commission at the time and place fixed in said order, and testify or produce the required books, papers, documents and accounts, and upon failure to obey said order, said witness shall be dealt with as for contempt of court. The remedy provided in this section is cumulative, and shall not be construed to impair or interfere with the power of the commission, or a commissioner, or the chief examiner or any such other authorized agent of the commission to enforce the attendance of witnesses and the production of books, papers, documents and accounts.

The commission, or any commissioner, or the chief examiner or such other authorized agent of the commission may, in any investigation or hearing before the commission, or any commissioner, or the chief examiner or such other authorized agent of the commission, cause the deposition of witnesses residing within or without the state to be taken in the manner prescribed by law for like depositions in civil actions in the superior courts of this state and to that end may compel the attendance of witnesses and the production of books, papers, documents and accounts.

No person shall be excused from testifying or from producing any book, paper, document or account in any investigation or inquiry by or hearing before the com-

mission, or any commissioner, or the chief examiner or such other authorized agent of the commission, when ordered to do so, upon the ground that the testimony or evidence, book, paper, document or account required of him may tend to incriminate him or subject him to penalty or forfeiture, but no person shall be prosecuted, punished or subjected to any penalty or forfeiture for or on account of any act, transaction, matter or thing concerning which he shall, under oath, have testified or produced documentary evidence; *provided*, that no person so testifying shall be exempt from prosecution or punishment for any perjury committed by him in his testimony. Nothing herein contained shall be construed as in any manner giving to any person immunity of any kind otherwise than is herein expressly provided.

Eighth—Make a biennial report to the governor for transmission to the legislature, showing the action of the commission including all the rules and regulations adopted by it during such period and those that are in force at the time of making such report, information as to exempted positions as required by this act and the effects of this act and of all proceedings under it and any suggestions the commission or any commissioner may deem practical for the more effectual accomplishment of the purposes of this act.

Ninth—Meet at Sacramento as often as the needs of the public service may require, and at such other places as the commission may designate. A majority of the members of the commission shall constitute a quorum.

SEC. 6. It shall be the duty of all persons subject to the authority of the state in that behalf (including all state officers and employees and all state institutions of every kind and character) to aid in all proper ways in carrying into effect the provisions of this act and the rules and regulations prescribed from time to time thereunder and especially, at the request of the commission, to allow the commission the reasonable use of public buildings and to heat and light the same for the purposes of making examinations of applicants and investigations as provided by this act. Every one subject to the authority of the state in that behalf shall afford to the commission and its members and employees all reasonable facilities and give inspection of all books, papers, documents and accounts applying or in any way appertaining to any and all offices subject to the authority of the state in that behalf, and shall also produce said books, papers, documents and accounts, and shall attend and testify when required to do so by the commission, or any commissioner, or the chief examiner, or the secretary or any other authorized agent of the commission. The attorney general shall advise and assist the commission, and the district attorneys of the counties shall prosecute violations of this act. The commission may employ special counsel.

SEC. 7. The appointing power in all cases not excepted or exempted under the provisions of this act, or by virtue of the provisions of the constitution of the state, shall fill positions by appointment, including cases of transfers, reinstatements, promotions and reductions, in strict accordance with the provisions of this act and the rules and regulations prescribed from time to time hereunder, and not otherwise. Except only and to the extent that the appointing power otherwise requests as hereinafter provided, the positions held in the following specified classes are excepted from such method of appointment:

First—Appointees of the legislature and one person holding a position having a confidential relation whether as secretary or clerk or stenographer to each such appointee.

Second—Appointees of the governor and one person holding a position having a confidential relation whether as secretary or clerk or stenographer to each such appointee.

Third—The chief deputy of and also one person holding a position having a confidential relation whether as secretary or clerk or stenographer to an elective officer.

Fourth—The secretary or executive officer, or both, and also the attorney and one stenographer of any board or commission appointed by the legislature or governor or elected by the electors, and all stenographers in the superior and appellate courts.

Fifth—The assistant and deputies of the attorney general and all special attorneys for boards and officers.

Sixth—The members of the appointing board of and any chief in any legislative reference or counsel bureau and one person holding a confidential relation to each such chief.

Seventh—One warden for each of the state prisons.

Eighth—One superintendent for each of the state reformatories, state hospitals or other state charitable or correctional institutions; also the parole officers for the state prisons, Preston School of Industry and Whittier State School.

Ninth—Persons employed by the University of California and the state normal schools, and the teaching force of the elementary, secondary, trades and technical schools.

Tenth—Persons engaged in work done by co-operation between the state and federal governments.

Eleventh—The state librarian, the chief deputy or assistant state librarian and also one person holding a position having a confidential relation to the state librarian, and appointees under provisions for court, law, teachers, school and county libraries.

Twelfth—The secretary, chief accountant and children's agents of the state board of control.

Thirteenth—The employees of the state railroad commission.

Fourteenth—Superintendents, chiefs, and heads of departments.

All provided that at any time any vacancy in any position in any of the above specified fourteen excepted classes may be filled by the appointing power in the manner provided by this act, in which case the person appointed shall hold, during the tenure of office of said appointing power, such position under the tenure of good behavior and subject to the provisions of this act as if that position had not been so excepted but upon such appointee ceasing to hold such position that position shall be open as in such excepted class. Upon such appointee ceasing to hold such office by reason of the termination of the tenure of office of said appointing power, said appointee shall be restored to place upon the eligible lists in accordance with such rules and regulations as the commission may prescribe in that behalf. Any position subject to the provisions of this act may be declared exempted by resolution passed by concurrence of the three commissioners. Such resolution shall state separately the reasons for each exemption. Not more than one appointment shall be made to or under any position covered by such resolution unless permission to appoint a different number is given therein. Any exception thus made may be terminated at any time by resolution of the commission. Appointments to exempted positions shall be reported immediately to the commission. The names of each exempted position and the names of the incumbent and the reason for each exemption shall be stated in the biennial reports of the commission.

SEC. 8. Within three months after the commission is constituted, it shall make rules for the classification of positions to be held under state authority to be provided by this act, and, subject to the provisions of this act, such rules shall govern appointments, transfers, reinstatements, promotions, reductions and removals, and examination of applicants, and the commission may amend such rules from time to time. Such rules shall be printed for public distribution.

SEC. 9. Subject to the special provisions in this act as to laborers, appointments shall be made to all positions that are not filled by promotion, reinstatement, transfer or reduction, under the provisions of this act and the rules in pursuance thereof, by the appointing power: Said appointing power shall notify the commission of any vacancy to be filled, stating the duties of the position. The commission shall then certify to the appointing power the names and addresses of the three persons standing highest on the eligible list for the class or grade to which the position belongs; but in case there be less than three on such eligible list, the commission shall certify the number thereon; and the appointing power shall fill the position by the appointment of one of the persons certified by the commission therefor. The term of eligibility shall be fixed for each eligible list at not less than one year. Appointments shall be made from the eligible list most nearly appropriate for the position to be filled, and a new list shall be created for a stated position or a group of positions only when there is no appropriate list existing from which appointment may be made. No person shall be appointed under any title not appropriate to the duties to be performed, and no person shall be assigned to perform the duties of any other position than that which he legally holds, except by consent of the commission. All appointments shall be for a probationary period to be fixed by the commission but not to exceed six months. Unless such appointee shall have been dismissed within such probationary period by the appointing power, for reasons stated in

writing and filed with the commission, his appointment shall become permanent subject to the provisions of this act as to removals, suspensions and changes. Discharged probationers may by unanimous vote of the commission be restored to the list of eligibles for certification to any position within their class other than the one from which they were rejected.

SEC. 10. The examinations shall be practical in their character, and shall relate to those matters which will fairly test the relative capacity and fitness of the persons examined to discharge the duties of the positions they seek. Applicants for positions in the mechanical trades and occupations may, in the discretion of the commission, be rated solely on experience and physical qualifications which may be determined by such evidence and in such manner as the commission may direct; and such applicants may be submitted to such further tests as the commission may require. The commission shall prepare lists of preliminary requirements and subjects of examinations for the several positions, and shall publish its rules and regulations and such information and advertise such examinations in such manner as the nature of the examinations may require. The commission, except as may be otherwise provided in the case of laborers, shall require an applicant to file in its office, in accordance with its rules and regulations, a reasonable length of time before the date of examination, a formal application filled out in his own handwriting. Blank forms of such applications shall be furnished by said commission without charge to all persons requesting the same. The commission may require in connection with applications, including laborers, such certificates of citizens, physicians, public officers or others having knowledge of the applicant, as the good of the service may require. The commission may refuse to examine, or after examination to certify as eligible, any one who is found to lack any of the established preliminary requirements for the examination or position for which he applies; or who is physically so disabled as to be rendered unfit to perform the duties of the position to which he seeks appointment, or who is addicted to the habitual use of intoxicating beverages to excess; or who has been guilty of a crime or of infamous or notoriously disgraceful conduct; or who has been dismissed from the public service for delinquency or misconduct; or who has intentionally made a false statement of any material facts, or practiced, or attempted to practice, any deception or fraud in his application, in his examination, or in securing his eligibility. Any person appointed to a position under the provisions of this act who has secured his place on the eligible list through fraud shall be removed by the commission from his position and shall not thereafter be eligible for examination for any position under the provisions of this act except by unanimous permission of the commission. When the position to be filled involves fiduciary responsibility, the appointing power may require the appointee to furnish a reasonable bond or other security, and shall notify the commission of the amount and necessary details thereof.

SEC. 11. When there is no eligible list from which a position may be filled, the appointing power may, with the consent of the commission, fill such position by temporary appointment, and such temporary appointment shall not continue for a longer period than three months, nor shall successive temporary appointments be made to the same position under this section without the previous consent of the commission, and in no case shall any person hold a position under such successive temporary appointments for a longer period than six months without the unanimous consent of the commission.

SEC. 12. The commission shall establish rules and regulations under which emergency appointments may be made when those on the eligible lists are not immediately available, and for the time for which such emergency appointments shall be valid; and may fix a different time for different counties or cities and counties of the state.

SEC. 13. Vacancies in positions shall be filled, so far as practicable by promotion from among persons holding positions in a lower grade of the department, office or institution in which the vacancy exists. Promotions shall be based upon merit and competition and upon the superior qualifications of the person promoted as shown by his records of efficiency. For the purposes of this section an increase in the salary or other compensation of any person holding an office or position within the scope of the rules and regulations in force hereunder beyond the limit fixed for the grade in which such office and position is classified, shall be deemed a promotion. The commission may authorize the transfer of any person legally holding a position to a similar position in the same class or grade, and may provide for the reinstatement within one year of persons separated from positions without fault or delinquency

on their part, if within that time there is need for their services. No promotion, transfer or reinstatement shall be made from a position in one class to a position in another class, nor shall a person be transferred to or reinstated in a position for original entrance to which there is required by this act or the rules and regulations thereunder an examination involving essential tests or qualifications different from or higher than those required for original entrance to the position held by such person.

SEC. 14. The tenure of every one holding a position under the provisions of this act shall be during good behavior, but any such person may be removed for any of the following causes:

(a) Incompetence or inefficiency.

(b) Dishonesty, intemperance, immoral conduct, insubordination, discourteous treatment of the public or of fellow employees, a violation of the provisions of this act or of the rules or regulations of the commission or any other failure of good behavior. The appointing power that could fill such positions under the provisions of this act if vacant or the commission may remove, as hereinafter provided, for such cause. The appointing power in so proceeding must furnish to the person holding such position written charges setting forth such ground for removal and file copy with the commission and allow the accused a reasonable time and opportunity to file with the commission and furnish to said appointing power written answer and explanation and thereafter said appointing power shall publicly hear and determine such charges after reasonable notice to the accused and the commission of the time and place of said hearing and affording the accused an opportunity at such hearing to present whatever competent evidence the accused may desire in defense. In case of charges presented by or to the commission, it shall proceed in like manner. A judgment of removal, in writing, setting forth the findings of said appointing power after such hearing and filed with the commission, shall be final and effect such removal and shall not be subject to review by any other tribunal, except that in case of proceedings against the same person before both the appointing power and the commission the judgment against the accused by either the appointing power or the commission shall control a judgment by the other in favor of the accused. Such appointing power may from time to time peremptorily suspend, with loss of salary or other compensation during such suspension, such person for such cause, and without trial, but only upon written charges so furnished to such person and filed with the commission and with the privilege to such person to so furnish to the appointing power and file with the commission written answer and explanation, but such suspension or total suspensions by that appointing power of that person shall not exceed thirty days. Either the appointing power or the commission may transfer charges to the other for action or investigation.

SEC. 15. The commission shall provide by rule for the employment of laborers in the labor class in the order of priority of application for employment. There shall be separate lists of applicants for different kinds of labor, and the commission may provide separate labor registration lists for departments, institutions, districts or localities. The commission may require an applicant for registration to pass such examination as they may deem proper with respect to his age, residence, physical condition, ability to labor, skill, capacity and experience. The commission shall establish such time as it may deem expedient for the duration of eligible lists in the labor class.

SEC. 16. It shall be the duty of each appointing power to report to the commission forthwith upon each appointment the name of the appointee, the title or character of the position, the date of the commencement of such service, and the salary or compensation therefor, and to report from time to time, and upon the date of official action in, or knowledge of each case, any separation of the person from the position, or other changes, and such other information as the commission may require in order to keep the roster hereinafter mentioned. The commission shall keep in its office an official roster of all persons holding positions under the provisions of this act and shall enter thereon the name of each and every person who has been appointed to, promoted, reduced, transferred, reinstated or removed from or left any position and require such evidence as it may deem satisfactory as to whether such person was appointed to, promoted, reduced, transferred, reinstated or removed from such position in accordance with the provisions of this act and the rules and regulations of the commission thereunder and as to when and why and how such person was otherwise separated from such position. The official roster shall show opposite, or in connection with, each name, the date of appointment, promotion, reduction, transfer or

reinstatement, the compensation of the position, the date of commencement of service and change in or separation from position and when and why and how there was such change or separation. The names of all persons holding positions at the time of the taking effect of this act which if vacated would be filled under the provisions of this act shall be certified to the commission by the appointing power that could then so fill such position if vacant, and such names shall be entered in said roster, and thereupon shall be deemed appointed under the provisions of this act and persons then holding such positions who have served in such positions a less period than one year and more than sixty days from the date of the classification of such positions as required by this act shall be deemed to be serving the probationary period, and persons who have served in such positions for less than such sixty days shall be deemed temporary appointees.

SEC. 17. It shall be unlawful for the controller or other fiscal officer of the state to draw, sign, issue, or authorize the drawing, signing, or issuing of any warrant on the treasurer or other disbursing officer of the state for the payment of, or for the treasurer or other disbursing officer to pay any salary or compensation to any one holding any position under the provisions of this act unless the estimate, pay roll or account for such salary or compensation, containing the name of the person to be paid, shall bear the certificate of the commission that the persons named in such estimate, pay roll or account are holding positions as provided by this act and the rules and regulations prescribed thereunder. Any sums paid contrary to the provisions of this section may be recovered from any one making such appointment in violation of the provisions of this act and of the rules and regulations prescribed thereunder or from any officer signing, or countersigning, or authorizing the signing or countersigning of any warrant for the payment of the same, and from the sureties on his official bond in an action in any court of competent jurisdiction of this state maintained by a citizen resident therein, who is assessed for and is liable to pay, or within one year before the commencement of such action has paid, a tax therein. All moneys recovered in any action brought under the provisions of this section must, when collected, be paid into the treasury of the state, except that the plaintiff in any such action shall be entitled to receive for his own use the taxable costs of such action.

SEC. 18. Any commissioner or examiner, or any person who shall wilfully by himself or in co-operation with one or more persons, defeat, deceive or obstruct any person in respect of his or her right of examination or registration, according to any rules or regulations prescribed pursuant to the provisions of this act, or who shall wilfully and falsely mark, grade, estimate, or report upon the examination or proper standing of any person examined, registered, or certified, pursuant to the provisions of this act, or aid in so doing, or who shall wilfully make any false representation concerning the same, or concerning the person examined, or who shall wilfully furnish to any person any special or secret information for the purpose of either improving or injuring the prospects or chances of any person so examined, registered, or certified, or to be examined, registered, or certified, or who shall personate any other person, or permit or aid in any manner any other person to personate him, in connection with any examination or registration or application or request to be examined or registered, shall be deemed guilty of misemeanor.

SEC. 19. No officer, agent, clerk or employee under the government of the state shall, directly or indirectly, solicit or receive, or be in any manner concerned in soliciting or receiving, any assessment, subscription, contribution or political service, whether voluntary or involuntary, for any political purpose whatever, from any one on the eligible lists or holding any position under the provisions of this act.

Every officer, agent, clerk or employee under the government of the state who may have charge or control in any building, office, or room occupied for any purpose of said government is hereby authorized to prohibit the entry of any person, and he shall not permit any person to enter the same, for the purpose of therein making, collecting, receiving or giving notice of any political assessment, subscription or contribution, and no person shall enter, or remain in any said building, office or room, or send or direct any letter or other notice thereto, for the purpose of giving notice of, demanding, or collecting a political assessment, subscription or contribution, nor shall any person therein give notice of, demand, collect or receive, any such assessment, subscription or contribution contrary to the provisions of this section.

SEC. 20. No one, while holding any public office, or in nomination for, or while seeking a nomination or appointment for, any public office, shall use or promise to use, whether directly or indirectly, any official authority or influence (whether then

possessed or merely anticipated) in the way of conferring upon any person, or in order to secure or aid any person in securing any position under the provisions of this act, either in nomination, confirmation, promotion, or increase in salary, or as to any change in any such position, upon a consideration or condition that the vote or political influence or action of the last named person or any other, shall be given or used in behalf of any candidate, officer or party, or upon any other corrupt condition or consideration. And no one, being a public officer, or in nomination for, or while seeking nomination or appointment for, any public office or having or claiming to have any authority or influence (whether then possessed or merely anticipated) for the securing or holding of or as to affecting any position under the provisions of this act, shall use, or promise or threaten to use, any such authority or influence, directly or indirectly, in order to coerce or persuade the vote or political action of any person on the eligible lists or holding any position under the provisions of this act.

SEC. 21. No salary, compensation or other emolument shall be paid to any one appointed to or retained in any position in violation of this act. Any officer approving or paying such salary shall be liable for such sum on his official bond. Whenever the commission shall notify the auditing officer that any position has been filled in violation of this act or any of the rules and regulations thereunder, no demand for the salary or compensation or other emolument of such position shall be approved or paid except upon the order of a court of competent jurisdiction.

SEC. 22. Any person acting in good faith in accepting appointment or employment contrary to the provisions of this act or of the rules and regulations prescribed thereunder, shall be paid by the appointing power the compensation promised by or on behalf of the appointing power or in case no compensation is so promised then the actual value of any service rendered and the expense incurred in good faith under such attempted appointment or employment, and shall have a cause of action against the appointing power for such sum or sums and for the costs of action. No public officer shall be reimbursed by the state or any of its instrumentalities for any sum so paid or recovered in such action.

SEC. 23. No recommendation or question or inquiry under the authority of this act shall relate to the political or religious opinions or affiliations of any person, and no appointment or change in or removal from any position under the provisions of this act shall be in any manner affected or influenced by such opinions or affiliations.

SEC. 24. Witnesses and officers to subpoena and secure the attendance of witnesses before the commission, or any commissioner, or the chief examiner or other authorized agent of the commission, shall be entitled to the same fees as are allowed witnesses in civil cases in courts of record. Such fees need not be prepaid, but the controller shall draw his warrant for the payment of the amount thereof when the same shall have been certified to by the commission and duly proved by affidavit or otherwise to the satisfaction of the controller.

SEC. 25. Any person wilfully violating any of the provisions of this act shall be guilty of a misdemeanor.

SEC. 26. The term veteran as used in this act means and includes any person who has served in the United States army, navy, marine corps, revenue marine service, or as an active nurse in the service of the American Red Cross, or in the army and navy nurse corps in time of war, or in any expedition of the armed forces of the United States, and received an honorable discharge or certificate of honorable active service proof of which shall be submitted to the civil service commission at the time of examination. (As amended statutes of 1921.)

SEC. 27. The civil service commission shall by rule establish preference for veterans as follows: In the case of entrance examinations to establish eligible lists for policemen and watchmen, veterans who become eligible for appointment by attaining the passing mark established for the examination, and whose service as veterans exceeds three months, shall be classified on such eligible lists in the relative order of the individual ratings attained, and ahead of all non-veterans passing such examinations, and shall be eligible for appointment on the basis of such order of standing on such eligible lists.

In the case of all other entrance examinations, veterans with thirty days or more of service, and widows of veterans who were married to such veterans on or before November 11, 1918, who become eligible for appointment by attaining the passing mark established for the examination, shall be allowed an additional credit of five points, which shall be added to the percentages attained in such examinations by such veterans, and they shall be placed on eligible lists and be eligible for

appointment in the order and on the basis of the percentages attained by them in examinations after such credit of five points shall have been added. All ties shall be decided in favor of veterans: *provided, however*, in the case of promotional examinations, a credit of three points shall be allowed to veterans and widows of veterans who were married to such veterans on or before November 11, 1918.

The civil service commission, for specific state services or employments, as determined by the commission, may, in examination, allow general or individual preferences in rating to veterans who have suffered permanent disability in line of duty; *provided*, that such disability would not prevent the proper performance of the duties required under such service or employment, and provided that such disability was of record in the files of the war department as of July 1, 1920.

In the case of examination to establish eligible lists for artisans, and in which credits are allowed for experience as a journeyman, periods of service in the armed forces of the United States, whether as artisan or otherwise, shall be counted by the commission as journeyman experience. (As amended statutes of 1921.)

SEC. 28. It is the purpose of this act to give preference, in the manner set forth in the foregoing section, to all persons who have served the government and the people in the army, navy, marine corps, revenue marine service, or as active nurses in the American Red Cross or the army and navy nurse corps, and particularly to persons who have rendered such service during the Ally-Germanic war, the Spanish-American war, the Philippine insurrection, the Boxer uprising, the Indian wars, or the Civil war. (As amended statutes of 1919.)

SEC. 29. Whenever this act or any part or section thereof is interpreted by a court, it shall be liberally construed by such court. (As amended statutes of 1919.)

SEC. 30. If any section, subsection, subdivision, sentence, clause or phrase of this act is for any reason held to be unconstitutional, such decision shall not affect the validity of the remaining portions of this act. The legislature hereby declares that it would have passed this act, and each section, subsection, subdivision, sentence, clause and phrase thereof, irrespective of the fact that any one or more sections, subsections, subdivisions, sentences, clauses or phrases be declared unconstitutional. (As amended statutes of 1919.)

SEC. 31. All acts and parts of acts inconsistent with this act are hereby repealed in so far as they are inconsistent with the provisions of this act.

APPENDIX VI.

RULES AND REGULATIONS OF THE STATE CIVIL SERVICE COMMISSION.

RULE 1.

SECTION 1. "Qualifications." Applicants must be citizens of the United States and they must be between the ages of 21 and 60 years unless otherwise specified by the Commission at the time of the announcement of the examination.

SEC. 2. Character and Fitness. Every applicant must be of good moral character, of temperate habits, and in all respects physically competent to perform the duties of the position applied for.

RULE 2.

Applications.

SECTION 1. All applications must be made upon official blanks furnished by the Commission and filled out as therein directed.

Applicants taking more than one examination must file a new and complete application for each such examination.

SEC. 2. Applicants for Present Credentials. Wherever written examinations are required, each applicant whose application has been approved shall be notified through the post office of the time and place of the examination, and such notice shall be the credential of the applicant to take the examination.

SEC. 3. Applicants for Positions as Laborers. Applicants for laborers' positions must not be over sixty years of age. Laborers shall be appointed according to priority of application, but all such applicants shall be examined as to age, residence, physical condition and experience, and must be found to be in good physical condition and with the capacity to perform hard manual labor.

Separate lists of applicants shall be made for laborers for Sacramento, San Francisco, and Los Angeles. The names of those laborers on the list for Sacramento shall be drafted for positions nearest Sacramento; names of those laborers on the list for San Francisco shall be drafted for positions nearest San Francisco; and the names of those laborers on the list for Los Angeles shall be drafted for positions nearest Los Angeles. When any of these lists become exhausted, names may be certified from the other lists.

All applications for laborers' positions must be on forms furnished by the Commission, and shall take precedence according to their receipt in the office of the Commission at Sacramento, each application being given a serial number in the order of its receipt by the Commission.

RULE 3.

Applications not to be returned.

Applications and accompanying vouchers not returned for correction shall remain on file in the office of the Commission, and in no circumstance will be returned to applicants.

RULE 4.

Examinations.

SECTION 1. Examinations to be Free. All examinations shall be conducted under the supervision of the Executive Member of the Commission without any cost or expense to any applicant, except for a medical or physical examination when required.

SEC. 2. Questions Placed Under Seal After Approval. All examination questions shall be first approved by the Executive Member of the Commission. The examination questions after approval shall be securely sealed with the official seal

of the Civil Service Commission. The seal shall not be broken until the beginning of the examination, and then only in the presence of all the candidates at the examination and the authorized agent of the Civil Service Commission.

SEC. 3. *Explanations.* All necessary explanations will be made to the whole class. No question will be explained to any individual candidate. Examiners are forbidden to explain the meaning of, or to make remarks relating to, any question that may assist in its solution.

SEC. 4. *Conversation During Examinations.* Communication between candidates during examination is strictly forbidden.

SEC. 5. *Leaving the Examination Room.* During an examination no candidate will be permitted to leave the room, except in case of extreme necessity, and then only with a representative of the Commission. A luncheon recess may be allowed, however, at the direction of the Commission.

SEC. 6. *Limit of Time.* The limit of time prescribed for such examination will be stated before the examination and shall begin to run when announcement is made by the examiner in charge.

SEC. 7. *Helps.* Candidates are forbidden to receive aid from a fellow candidate or to use helps in any form. Before the commencement of an examination candidates will be required to hand to the examiner any printed or written matter in their possession that might serve to aid them in the examination. Evidence of copying or collusion may result in the cancellation of examination papers and the debarment of the candidate from future examinations. Copies of the questions in the examination may not be made or taken from the examination room.

SEC. 8. *Rating of Examinations.* All examinations shall be rated on a scale of 100, and the relative weights of the different subjects, including experience, shall be determined by the Executive Member of the Commission at the time of the announcement of the examination.

SEC. 9. *Rating of Examination Papers.* Where written examinations are required they shall be so managed that no examination papers will disclose the name or identity of any applicant until all the examination papers shall have been marked.

Each candidate must write his name and address upon a declaration sheet, which must have printed upon it a serial number, to be known as his examination number.

The candidate shall mark upon each examination sheet his examination number. When the examination papers have been rated the declaration sheet shall be unsealed and the examination papers assigned to the name of the person who wrote them.

So far as practicable, questions on different subjects of examination shall be answered on separate sheets and all the answers on a given subject shall be rated by the same examiner. Where the number of examiners will permit, the answers shall be redistributed by subjects for review by other examiners after being rated in the first instance.

SEC. 10. *Identification Marks.* Any candidate in any examination who places an identification mark upon his examination papers, other than his serial number, may be deprived of all benefits under such examination.

The following are marks of identification within the meaning of this rule: Name or address of the candidate; any assumed or fictitious name or address; any initials, lines or other characters that might indicate the identity of the candidate.

SEC. 11. *Marking and Grading of Papers. Relative Weights, and Method of Determining Average Percentage.* The relative weight of each subject shall be fixed and announced by the Executive Member of the Commission, and all examination papers shall be marked and graded under the regulations of said Executive Member. When, during the marking and grading of the papers, it becomes apparent that a candidate, whose papers have been partially marked, would receive a general average percentage less than the minimum percentage for eligibility fixed by said Executive Member, or if the candidate receives less than the minimum percentage required on a given subject, then such candidate shall be considered as having failed and the marking of his papers need not be completed.

The different subjects in each examination are given relative weights according to their importance. These weights represent the value of each subject in the whole examination. The method of obtaining the average percentage of the examination is as follows: Multiply the rating obtained in each subject by the relative weight of that subject, add the products, and divide the sum of the products by the

sum of the relative weights. The quotient thus obtained will be the average percentage for that examination.

When an examination is being held for any given position, it shall be within the province of the examiner to pass an applicant for a position in a lower grade of the same class, if in the opinion of the examiner the applicant is qualified to fill the lower grade position, but not qualified to fill the higher grade position.

SEC. 12. *Minimum Standing.* Candidates shall be required to attain a general average of not less than 70 per cent in order to pass an examination, except that in promotional examinations candidates shall be required to attain a general average of not less than 85 per cent in order to pass. (As amended May 13, 1924.)

SEC. 13. *Notice of Result of Examinations.* As soon as the marking and grading of the papers shall have been completed and the eligible registers established, each candidate shall be notified through the post office of his general average percentage and relative standing obtained upon examination.

Where the marking of the examination papers has not been completed because the candidate has failed in any given subject, he shall be notified of that fact.

SEC. 14. *Appeal for Review.* Any applicant may appeal to the Executive Member of the Commission to have his examination papers reviewed on the ground of errors committed therein, if said appeal is made in writing within thirty days after receiving announcement of the result of the examination. Upon a review of the examination papers of the applicant, his rating may be changed in accordance with such review. If, in the judgment of said Executive Member, such review discloses errors on the part of the examiner affecting the examination papers of all the applicants, then all the examination papers may be reviewed.

SEC. 15. *Veteran Preference.* To be entitled to veteran preference as provided for in section 27 of the Civil Service Act, applicants must file with the Civil Service Commission the original or certified copy or photograph copy of honorable discharge papers or of certificate of honorable active military service. Such papers must be filed with the application for examination in the office of the Civil Service Commission prior to the date of the examination.

RULE 5.

Eligible registers.

SECTION 1. Successful candidates shall be enrolled upon the register of eligibles in the order of their general average percentage upon examination without regard to priority of application or examination, except that two or more candidates receiving the same percentage shall be enrolled according to the percentage attained in the chief essential of the examination, and with the further exception that if one of the candidates so rated be a veteran he shall be given the preference.

SEC. 2. Successful candidates may be enrolled upon two or more eligible registers at the same time.

RULE 6.

Certifications.

SECTION 1. *Vacancies.* Whenever a vacancy is to be filled the appointing power shall notify the Executive Member of the Commission of that fact, stating the duties of the position.

SEC. 2. *Three Names to be Certified.* The said Executive Member shall then certify to the appointing power the names and addresses of three persons who stand highest on the eligible list for the sub-class or grade to which the position belongs. In case there are less than three upon such eligible list there shall be certified the number thereon and the appointing power shall fill the position by the appointment of one of the persons so certified. Where the employment is for a period of sixty days or less, only those names of eligibles who live in the vicinity of the employment may be certified.

If an appointing power have at the same time more than one vacancy in the same sub-class and grade to be filled, as many names as there are vacancies, and two names in addition to the total number of such vacancies if there be that number of names on the register, shall be certified in the manner previously set forth.

The appointing power shall fill the first vacancy by the selection of one of the highest three eligibles so certified. The second, and any succeeding vacancy, shall be filled in like manner by selection in turn from the highest three remaining names.

If, in any case indicated, there be no additional name or names on the register, or if the number of names which can be certified or which are finally available for appointment be less than the number specified in this rule but at least equal to the number of vacancies to be filled, then the required selection shall be made from the names certified and available.

SEC. 3. *Next in Rank After Waiver.* Whenever an eligible has been certified to the appointing power, and such eligible waives appointment, the secretary shall forthwith notify the appointing power of such waiver and certify the next highest eligible, whereupon said next highest eligible shall have the same standing as though originally certified.

SEC. 4. *New Positions.* Whenever a new position is created, the appointing power who may fill such position shall immediately make requisition upon the Executive Member of the Civil Service Commission for an eligible to fill the position, and shall at the same time furnish said Executive Member with a detailed statement of the duties attached to said position. It shall then be the duty of the Executive Member to classify said position and certify eligibles in accordance with the provisions of section 2 of this rule.

SEC. 5. *Examination Papers to be Forwarded With Certification.* Upon the certification of eligibles to any appointing power to fill a vacancy, the examination papers of the eligibles shall be transmitted with the notice of certification if required by the appointing power. Within ten days thereafter all examination papers must be returned to the office of the Commission by the appointing power.

RULE 7.

Failure to respond.

SECTION 1. Any eligible who fails to respond within a reasonable time after notice has been sent him to report for duty will be stricken from the eligible register, unless, within thirty days from the date of the notice sent him, he presents reasons satisfactory to the Executive Member of the Commission for his failure to report.

When the eligible resides in the city from which the notice has been sent three days shall be deemed a reasonable time in which to respond. When the eligible resides in some other city or county the time consumed in transmission of the letter to his place of residence and return shall be added to the three days.

SEC. 2. Any eligible who fails to respond within a reasonable time after any notice sent him by the Executive Member of the Commission requiring an answer will be stricken from the eligible register, but may be restored if at any time during the period of his eligibility he presents reasons satisfactory to the said Executive Member for his failure to respond.

RULE 8.

Declination and waiver of certification.

SECTION 1. An eligible may at any time have his name temporarily withdrawn from the eligible register upon giving reasons in writing satisfactory to the Executive Member of the Commission, and his name may be restored thereto at the discretion of the said Executive Member upon written application of the eligible during the period of his eligibility.

SEC. 2. An eligible may, when his name is reached for appointment to a temporary position, waive certification without losing his position upon the eligible register. A temporary position is one that will last for less than six months.

SEC. 3. Whenever an eligible has indicated the locality or institution in which he will accept employment, he may decline certification to positions in other localities or institutions, without losing his position upon the eligible register.

An eligible may decline appointment after certification without losing his position upon the eligible register for any reason satisfactory to the said Executive Member.

In the event of an absolute refusal of a permanent position by an eligible for reasons that are not satisfactory his place upon the eligible register shall be declared vacant and his name shall be removed therefrom. The said Executive Member

may in his discretion, however, restore his name to the eligible register for the remaining period of his eligibility upon his written application therefor.

RULE 9.

Appointments.

SECTION 1. *Probationer.* A probationer is one who having been certified and appointed after examination has been employed less than six months.

The probationary period for any appointment is hereby fixed at six months.

SEC. 2. *Permanent Appointments.* A permanent appointee is one who having been a probationer, has served more than the required probationary period of six months.

SEC. 3. *Temporary Appointments.* A temporary appointee is one who has been appointed to a position without examination, and with the previous consent of the Executive Member of the Commission.

Whenever a position is to be filled, the appointing power must make application in writing to the said Executive Member to fill the same by the certification of eligibles in accordance with section 9 of the Civil Service Act.

When there are no eligibles from which to fill the position, the Executive Member of the Commission may authorize the appointing power to fill such position by temporary appointment, such temporary appointment to continue until such time as they are eligible but not to exceed ninety days from date of appointment. Until such permission has been given no authority exists in the appointing power to make a temporary appointment.

Upon making the appointment it will be incumbent upon the appointing power to notify the said Executive Member, naming the appointee, the title and character of the position, the date of commencement of service, and salary or compensation thereof, as required by section 16 of the Civil Service Act.

SEC. 4. *Emergency Appointments.* Emergency appointments are those made notwithstanding there may be an eligible list, for the reason that eligibles are not immediately available. In certain departments of the state men are employed and discharged almost daily, but they are at such great distance from the heads of their departments that in some cases word can not be either sent to or received from them for several days. In order to prevent the stoppage of public business when the necessity of making short-time appointments exists, permission is hereby granted to the appointing power in any department of the State Civil Service to make emergency appointments for not more than fifteen working days. The name of the appointee, the duties of the position, the nature of the emergency, and the further data required by section 16 of the Civil Service Act must be mailed to the office of the State Civil Service Commission.

Where the appointing power is sufficiently near Sacramento to make application for a temporary appointment with the previous consent of the said Executive Member, a resort to emergency appointments will be deemed an abuse of the privilege of this rule.

Emergency appointments may not be continuous.

RULE 10.

Report of appointment.

Whenever the names of three eligibles have been certified to the appointing power to fill a vacancy, it shall be the duty of the appointing power to make the appointment forthwith. It shall also be the duty of the appointing power to make immediate report to the office of the Commission of the fact of appointment.

RULE 11.

Efficiency records.

In all offices and places of employment subject to the Civil Service Act, the appointing power shall make records of the individual efficiency of holders of positions in performing their duties and shall file such records monthly with the office of the Civil Service Commission on or before the fifth day of the month succeeding that in which the records were made.

The efficiency records shall be rated upon:

First. Quality—Meaning the ability of an employee to perform the task to which he or she is assigned, and the degree of excellence attained in its performance. Cognizance should be taken of such qualities as neatness of work, originality, resourcefulness, initiative, sense of order, system, judgment, tact, special knowledge, technical ability, mechanical skill and ability to direct work and to manage men.

When "temperamental qualities" determine the usefulness of employees, as in the case of teachers in a reform school, or nurses in an institution, "temperamental aptitude" shall be rated under quality.

Second. Quantity—Meaning the amount of work done. In cases where the work is not measurable, ratings should be on alertness, or promptness, speed, industry, perseverance, energy, diligence and willingness to work.

Third. Discipline—Including treatment of the public, treatment of fellow employees, sobriety, obedience to rules, and personal neatness.

Fourth. Attendance—Including absence and punctuality. Quality and quantity of work shall be rated on a percentage basis. The grading shall be as follows:

| | |
|---|--------------|
| For excellent or exceptional work..... | 90-100 |
| For good or thoroughly satisfactory work..... | 80- 90 |
| For fair or not wholly satisfactory work..... | 70- 80 |
| For poor or unsatisfactory work..... | 70 and below |

Eighty-five per cent is arbitrarily taken by the Civil Service Commission as the marking for an average employee doing thoroughly satisfactory work.

Where markings above 90 per cent or below 70 per cent are reported, an explanation should accompany, stating briefly the reason therefor. The Civil Service Commission retains the right to investigate such ratings before entering them upon its records.

Attendance shall be recorded by demerits:

Tardiness—1 demerit for 5 minutes or less; 3 demerits for more than 5 minutes and not exceeding one hour; 5 demerits for more than one hour.

Absence without leave—5 demerits for each day, same to be noted by an accompanying star (*). (Absence without leave for one or more days in any one month shall be cause for investigation by the Civil Service Commission.)

Absence with leave not exceeding 15 days, half a demerit for each day of said period; 1 demerit for each day in excess thereof. A period so penalized shall not be for more than one month. Absence on sick leave not exceeding 30 days, half a demerit for each day.

An employee is considered present when detailed on special work and during his vacation.

No efficiency credit shall be allowed for overtime work.

Discipline shall be recorded in demerits:

Penalties to be given for laxity in observance of or violation of established rules and regulations, failure to report, incivility, deportment, manner, inebriety, indolence, personal neatness, and habits. If suspension is imposed for disciplinary purposes, the demerits under "discipline" shall be as follows:

| | |
|---|-------------|
| For a suspension of 1 day..... | 10 demerits |
| For suspension of more than 1 day and less than 7 working days..... | 15 demerits |
| For more than 6 and less than 13 working days..... | 25 demerits |
| For more than 12 and less than 28 working days..... | 40 demerits |

When demerits are so made, there shall not be any penalty under "attendance" for the suspension period.

The total demerits reported with any individual record shall be added, the sum divided by 5 and the result subtracted from the average marking for quantity and quality of work. The remainder shall be entered on the report as the net efficiency.

If the net efficiency of any employee falls below 70 for any one month, the secretary of the Commission may file a charge of inefficiency against such employee with the Civil Service Commission. If such charge is filed, it shall be the duty of the Civil Service Commission to try the said employee for inefficiency. If, after such trial, it shall find the ratings to be just, the Civil Service Commission shall enter judgment, removing the said employee from the civil service of the State of California, and his name shall be stricken from the list of eligibles.

In case the net efficiency of an employee shall fall below 80 continuously for three months, the Executive Member of the Commission may reduce the salary or grade of such employee.

The efficiency records of any office or department shall be made upon a letter-size form, at the left of which shall be a column for the names of the employees in the said office or department arranged alphabetically. In the first column to the right of the name shall be written the name of the position; in the second column the salary paid; in the third column shall be rated the attendance; and it shall be in a double subcolumn in the first of which shall be recorded demerits for tardiness, and in the second shall be recorded the demerits for absence; in the fourth column shall be recorded discipline demerits; in the fifth column shall be rated quality of work; in the sixth column shall be rated the quantity of work; and three columns shall be left at the extreme right for noting the average positive per cent rating, the total number of demerits and the net efficiency.

The appointing power shall require the immediate supervisor of the persons whose efficiency records are being made up to certify to the appointing power, the record for the quantity and quality work, discipline and attendance. From the record thus transmitted to the appointing power or its authorized agent by the said immediate supervisor, the appointing power or its authorized agent shall cause to be made the entries in the efficiency records to be submitted to the office of the Civil Service Commission. A copy of said record shall be kept in the office of the appointing power.

RULE 12.

Leaves of absence.

SECTION 1. Vacation. (a) To be entitled to a vacation with pay, an employee must have been employed continuously at least six months. He is then entitled to a vacation of fifteen full working days during the first year of service.

(b) The vacation period must be during his period of service—that is to say, he must not have resigned to take effect during his year of service, or been dismissed from the service of the state. The time of the vacation is in the discretion of the appointing power unless the appointing power fails or neglects to give the employee a vacation until the last fifteen working days of the year's service, in which case the employee shall be entitled, as of right, to a vacation during said last fifteen working days of the year's service.

(c) An employee may resign, to take effect at the end of his year of service, and would be entitled to his vacation during the last fifteen days of his year of service notwithstanding.

(d) If an employee resigns to take effect before the end of his year of service or is dismissed, before he has enjoyed his vacation, he is not entitled to a vacation.

(e) In computing working days, Sundays and holidays should not be included. Saturday is a working day.

(f) Such a vacation shall not be cumulative; that is, of not taken one year, the employee will not be entitled to thirty days the next year.

SEC. 2. Sick Leave. (a) When a state employee is prevented by sickness from reporting for duty, or when some member of his family is afflicted with contagious disease, as a result of which his presence in the service would jeopardize the health of fellow employees, he must immediately send notice thereof to his superior, and thereafter he shall be granted sick leave.

(b) Employees claiming sick leave must furnish the Executive Member of the State Civil Service Commission with a medical certificate showing that they have been actually disabled from performing work, and from and to what dates. Where the person claiming sick leave is working at an institution where the state has physicians employed, the certificate may be made by any such physician. Those working in a department where a physician is not employed must furnish a certificate from some responsible physician. Certificate forms may be secured from the office of the Civil Service Commission and must be approved by the appointing power before forwarding to the office of the Civil Service Commission. Where the leave is for five days or less the certificate may be signed by only the appointing power, if he so elects.

(c) If an employee has held a position in the state service continuously for six months immediately preceding sick leave, he may upon the recommendation of the

appointing power, be granted full pay until recovery, provided the same shall not exceed seven days.

(d) If an employee has held a permanent position in the state service continuously for one year immediately preceding sick leave, he may upon recommendation of the appointing power, be granted full pay until recovery, providing the same shall not exceed fifteen days, upon proper showing made to the Civil Service Commission.

(e) In exceptional cases, upon proper showing to the Civil Service Commission the leave may be extended for a total of thirty days at full pay and thereafter sixty days at half pay; no leave, however, shall, exceed ninety days in any year of service.

(f) Where an employee of the state is incapacitated by an accident and claims compensation under the act of the legislature, approved May 23, 1917, he shall not be entitled to the benefit of sick leave with pay.

(g) Sick leave shall be reckoned upon calendar days for monthly employees, and upon working days for per diem employees.

SEC. 3. *Special Leave.* Leave without pay, if requested in writing by a state employee, may be granted for a period of not to exceed one year, if recommended by the appointing power and approved by the Executive Member of the Civil Service Commission; *provided*, that leave of absence for less than thirty days may be granted by the appointing power without the approval of said Executive Member.

SEC. 4. *Reemployment after Leave.* A position shall be held open for an employee when on sick leave for ninety days or when on a special leave for not exceeding thirty days. When an employee is absent on special leave exceeding thirty days he shall not be entitled as of right to be restored to the position he formerly occupied, except on the request of the appointing power and approval of the Executive Member of the Civil Service Commission. He shall, with the approval of the said Executive Member, be entitled, unless restored to the position he formerly occupied, to have his name placed on the general lay-off list, or on the eligible register of his sub-class and grade in accordance with his original percentage, *provided* he shall not be considered for appointment until at least ninety days from the time at which he entered upon leave have expired.

RULE 13.

Absence without leave.

SECTION 1. Absence from duty without leave for any time, will be considered good cause for dismissal.

SEC. 2. Absence from duty without leave for ten consecutive days shall be deemed a resignation from the service by the absentee, and upon the report of such absence by the appointing power to the Civil Service Commission, the absentee shall be removed from the service of the state, and the fact of removal shall be entered in the official roster; *provided*, that if at any time within thirty days the person so absents himself shall make satisfactory explanation to the Executive Member of the Civil Service Commission of the cause of his absence he shall be restored to his position.

RULE 14.

Reduction in force.

SECTION 1. Whenever it becomes necessary to reduce the number of employees in a given sub-class they shall be laid off by the appointing power according to their relative efficiency, the least efficient being laid off first, and their names shall be entered upon the departmental lay-off list, which list shall be immediately filed with the Civil Service Commission. Employees laid off shall be reemployed in the order of their relative efficiency. The Executive Member may make separate provision for the reemployment of persons having special qualifications.

SEC. 2. Employees desiring reemployment in other departments may request that their names be placed upon the general lay-off list for their sub-class and grade. Their names shall be entered upon such list in accordance with their records of service and efficiency, as may be determined by the Executive Member of the Commission. If the record of service of an employee does not justify the placing of his name upon the general lay-off list, his request may be denied; or, in the

discretion of the Executive Member, his name may be restored to the eligible list with his original percentage. Certification from the general lay-off list will be made in advance of and in the same manner as from the eligible register. Where, however, there are less than three names upon any general lay-off list, a sufficient number of names to make three shall be added from the eligible register for the same sub-class and grade. Any name on any lay-off list may be removed therefrom at any time after one year by the Executive Member of the Civil Service Commission.

SEC. 3. Whenever a probationer shall be laid off for lack of work he may be assigned to work suitable to his sub-class and grade in any other department of the state service. The probationer shall have credit for the time he may have served until he shall have served six months in all. No distinction shall be made between a probationer and a permanent employee when making lay-offs, but in all cases the appointing power shall be guided by the relative efficiency of the persons laid off. The names of those laid off during their probationary period shall be restored to the eligible list in accordance with their original percentage, unless the Executive Member elects to place the names of such persons upon either the departmental or general lay-off lists.

RULE 15.

Transfers.

SECTION 1. Transfers, as provided by section 13 of the Civil Service Act, may be made by the appointing power only with the previous consent of the Executive Member of the Commission.

SEC. 2. Eligibles appointed after examination to fill a position in a given class may not be transferred to positions in another class.

SEC. 3. No employee who has occupied a position for thirty days after appointment from the eligible list and whose services during that time have been satisfactory, shall be compelled by the appointing power to report for duty in another part of the state without the consent of the Executive Member of the Commission. (As amended September 18, 1923.)

NOTE.—The Civil Service Commission does not take the initiative in arranging transfers. Employees desiring transfers should take the matter up with the head of their department, and with the head of the department to which they wish to be transferred.

RULE 16.

Resignation or relinquishment of position.

SECTION 1. When a civil service appointee desires to resign his position he shall present his resignation, in writing, to the power that appointed him, and a copy of such resignation shall immediately be filed by the appointing power with the Civil Service Commission, together with a statement from the appointing power of the action taken thereon. An appointee so resigning from the service may within one year, with the recommendation of appointing power, be reinstated to the position from which he was separated or a similar position in the same department if there be need for his services, upon petition to and favorable action by the Executive Member of the Civil Service Commission.

SEC. 2. The Executive Member of the Commission may, when in his judgment there appear good and sufficient reasons, permit a civil service appointee to relinquish his position and place his name upon the general lay-off list, provided such appointee shall make application for such action in person or in writing; *and provided, further*, that if such an appointee be permitted to relinquish his position under this section he shall not again be considered for any appointment in the class he vacated until at least 90 days thereafter have expired, nor shall he ever again be considered for reappointment to the same department to the kind of position he relinquished except with the consent of the appointing power.

SEC. 3. An appointee to a temporary position as defined by rule 8 of section 2, may, with the consent of the appointing power, and the Executive Member of the Civil Service Commission, be permitted to relinquish such position and such relinquishment shall be deemed to be a waiver of all other temporary employments until a withdrawal of waiver is filed with and acted upon by the said Executive Member.

RULE 17.

Promotions.

SECTION 1. Method of Promotion. Vacancies in positions, unless filled by reinstatement or transfer, shall be filled so far as practicable by promotion from among persons holding positions in the next lower grade of the department, office, or institution in which the vacancy exists. An increase of salary beyond the grade of the position occupied shall be deemed a promotion.

Promotion shall be based upon merit determined by competitive examinations and by the superior qualifications of the person promoted, as shown by his record of efficiency. Applicants for promotional examination must have permanent standing in the next lower grade of the class in which the position to be filled by promotion exists, and must have occupied a position in such lower grade for at least six months immediately preceding the date of the examination. Applicants for promotional examinations shall register in the office of the Commission at least three days before the date fixed for the examination. (As amended September 18, 1923.)

The recommendation of the appointing power, with reasons for the recommendation, shall be a factor in all promotional examinations, and shall be given a rating to be determined by the Executive Member of the Commission upon the announcement of the examination.

Whenever a vacancy is to be filled by promotion, and the number of applicants in the next lower grade who present themselves for examination are so few that in the judgment of the said Executive Member the good of the public service requires that such promotion shall be open to all employees in the lower grades of that class, he shall so declare and notify all employees in such lower grades that such examination will be held and of their eligibility, and shall proceed to hold an original competitive examination to fill such positions.

SEC. 2. Salary Increases. (a) Advancement of salary within each subclass and grade shall be based upon efficiency and length of service, and the rate of advancement or the amount of salary increase shall be in accordance with the salary schedule established for each such subclass and grade in the classification of positions of the Civil Service Commission.

(b) Advancement of salary for efficiency and length of service shall not be made oftener than semi-annually, preferably on January 1, and July 1, of each year, except in emergency cases presented to and approved by the Executive Member of the Civil Service Commission. (As amended October 8, 1923. November 20, 1923.)

SEC. 3. An employee who resigns from the service or who takes a leave of absence for more than thirty days, after having passed a promotional examination, shall be considered as having relinquished his right to promotion, and his name shall be stricken from such promotional list. Such employee's name may, if the employee requests it in writing, be placed upon the eligible list for the same class and grade in accordance with the percentage rating attained in the promotional examination. (As amended October 13, 1923. November 20, 1923.)

RULE 18.

Trials and dismissals.

SECTION 1. Charges under section 14 of the Civil Service Act may be made by the appointing power or its representative, the Civil Service Commission or its representatives, or any citizen.

Such charges shall be tried either by the appointing power or the Civil Service Commission, and shall be instituted by serving upon the defendant a written complaint setting forth the grounds for removal with such particularity as shall enable the defendant to understand clearly the charges made against him, and filing with the Civil Service Commission a copy thereof.

Within ten days after service upon him of the complaint, the defendant shall file with the Commission and furnish to the prosecutor a written answer thereto.

The appointing power, in case the charges are to be heard by it, shall then notify the defendant and the Civil Service Commission of the time and place of hearing of said charges, and in case the Civil Service Commission shall hear said charges it shall notify the defendant and the prosecutor of the time and place of hearing said charges.

The time of hearing shall not be less than five nor more than ten days from the service upon the prosecutor of the answer of the defendant.

The defendant at such hearing shall have opportunity to present whatever competent evidence he may desire in his own defense and shall have the right to be represented by counsel. Failure to file an answer within the time allowed shall be construed as an admission of the truth of the charges by the defendant, and judgment of removal shall be entered forthwith and filed with or by the Commission.

Either the appointing power or the Commission may transfer charges to the other for action or investigation.

SEC. 2. The hearing of charges may be by the Commission, any commissioner, the chief examiner or any other agent of the Commission as it may direct, or the appointing power.

SEC. 3. Any civil service appointee dismissed from employment after trial shall be removed forthwith from all eligible lists and shall not be eligible for examination thereafter without the consent of the Commission. Any eligible or appointee convicted of a felony shall be dismissed from the service of the state and shall have his name stricken from all eligible registers.

RULE 19.

Where any position involves the handling of cash an eligible certified to such position and appointed by the appointing power may be required to furnish a bond in the sum nominated by the appointing power and approved by the Executive Member of the State Civil Service Commission.

RULE 20.

Regular and special meetings.

Regular meetings of the Civil Service Commission shall be held on the second Tuesday of every month in the office of the Commission in Sacramento, at 1.30 o'clock p.m.

Special meetings may be called at any time by the president or by a majority of the commissioners, provided forty-eight hours' notice of such special meeting be given to all members of the Commission. A notice of each special meeting shall state the business for which said meeting is called, but any other business may be transacted at such meeting. Ordinary parliamentary rules shall govern the deliberations of the Civil Service Commission.

RULE 21.

Public inspection.

All the books, records, answers and papers pertaining to examinations or other proceeding shall be open to the inspection of any citizen.

RULE 22.

Amendments to rules.

The rules of the Civil Service Commission may be amended at any meeting.

RULE 23.

Classification.

The provisions of the classification of positions of the Civil Service Commission and the salary schedule established in connection therewith shall have the same force and effect as the rules and regulations of the Commission and shall be considered a part of said rules and regulations. (As amended October 8, 1923, and November 20, 1923.)

REPORT

OF THE

California

State Board of Equalization

FOR

1923-1924

STATE BOARD OF EQUALIZATION

CALIFORNIA STATE PRINTING OFFICE
FRANK J. SMITH, Superintendent
SACRAMENTO, 1924

**THE STATE OF CALIFORNIA
HAS LOST AN EXEMPLARY PUBLIC SERVANT.**

Hon. John Mitchell, a member of this Board, died at his home in Oakland on October 1, 1924.

In the death of John Mitchell, who for fourteen years had been a member of this Board, the State of California lost an official, than whom she had none more honorable, more conscientious, more loyal, nor more fearless, in the discharge of duty.

John Mitchell measured every duty by the creed that: "We are not bound to win, but we are bound to do right as God gives us to see that right," and his every act was determined accordingly.

He has left to his family a heritage greater than riches, a life record of an unflinchingly honest and conscientious discharge of public duty, a radiant example of loyalty, devotion and helpfulness as broad as his opportunity, of which thousands can say: "I am better for his having passed this way."

REPORT OF THE STATE BOARD OF EQUALIZATION.

*To his Excellency, FRIEND WM. RICHARDSON,
Governor of California.*

SIR: In compliance with law, the State Board of Equalization herewith submits its biennial report covering the assessment years 1923 and 1924, together with a summary of the status of tax litigation and a summary showing the first effects of the administration of the new Motor Vehicle Fuel License Tax and the Motor Transportation License Tax Act, adopted by the 1923 legislature, as well as other topics relating to and affecting revenue.

RAILROAD SUITS AGAINST THE STATE.

In our report for 1921 and 1922 we set forth at length the facts with relation to the suit of the Southern Pacific Company and The Atchison, Topeka and Santa Fe Railway Company against the state to avoid the increased tax provided in the rate raise passed by the 1921 legislature. The fundamental facts underlying the disputed points in these suits have not changed except as they have been cleared up by the District Federal Court decision. Trial of the cases was had in the District Federal Court which rendered its decision in favor of the state's contention. The railroad companies appealed and the case is now on appeal in the United States Supreme Court. It is set for hearing and will be argued early in 1925 and we confidently expect that the court will give its decision very soon thereafter. If this presumption be correct, the money involved should be received, if at all, during the year 1925.

We advised in our previous report that these cases involved pretty generally the fundamentals of the present tax system and that a decision in them would no doubt go a long way to clear up such questions as remain with relation to its proper application. The District Federal Court did this to the extent that it held that "the state having classified its properties for taxation, was at liberty to fix different tax rates or different tax burdens upon the different classes," in other words, that no equalization as between the tax on general properties taxed on an *ad valorem* basis and public utility properties taxed on the gross receipts basis was necessary, that the state through the legislature could purposely fix an unequal burden as between those two classes, if it found it advisable to do so.

This the court said still held true even though a part of the taxpayers in the higher burden class might be engaged in interstate commerce so long as the excess burden did not reach a point sufficient to hamper or interfere with the carrying on of that commerce. The court did not and could not fix the exact point at which this would occur indicating that it would be governed by circumstances.

In order that there might be no unsettled point in the case, the court went further and held that if its first finding "that equality is not necessary" should be determined to be untenable; that it also found and so gave its judgment and decision that such inequality as does exist

under the rates fixed in the legislative act of 1921 in favor of so-called common properties and as an added burden upon utility properties was not sufficiently broad to warrant a court in disturbing it, since the legislature had held hearings and provided itself with information for the avowed purpose of equalizing the tax burdens and had declared that that was the result of its findings, the presumption being that it made an honest attempt to do so.

In order that the exact position of the state, as the court outlined it, might not be misunderstood, a statement of the following facts seems indicated. In the decision above quoted from, the court made it plain that—

First—The state's finding as presented to the court through the State Board of Equalization that the average tax burden on general property in the state was \$1.74 plus, was somewhat more than was warranted and to that extent too favorable to the state.

Second—That the banks and corporations findings that the average tax burden upon each \$100 of general property so-called, was less than \$1.60, was on the other hand less than was justified and accordingly too favorable to the utilities, and gave as its opinion that a point between these two would be a correct one.

Third—That the values of railroad property as found by the state were also excessive and favored the state's contention too greatly.

Fourth—That the corporations values of their own property as well as those of Professor Plehn, the railroad expert, were too low and accordingly too much in favor of the contention of the corporations and expressed his judgment that a composite value, taking into consideration the result of the various methods used both by the state and the corporations, would be more nearly correct.

Fifth—That the railroad companies were paying more tax per \$1 of value or carrying a higher tax burden according to value than was true of so-called common or *ad valorem* properties, but not sufficiently so to warrant a court in disturbing it even if equality were required, since it was the result of an honest endeavor on the part of the legislature to equalize the two.

Sixth—While the state had fixed and could fix a different and higher tax burden on public utility property, if it so desired, that the spread of difference where interstate operators were concerned must not be great enough to disturb their interstate activities.

Taxes from Corporations, Seventy-fifth and Seventy-sixth Fiscal Years.

(As shown by state tax rolls.)

INSURANCE LITIGATION.

Since our last biennial report, the Supreme Court has rendered a decision adverse to the state on a part of the questions involved in the litigation with insurance companies. It was held in this decision that the item of dividends applied to reduce insurance premiums was not "receipts" by the company and therefore not taxable. The remaining questions involved in this litigation have been settled between the Attorney General and the insurance companies and no further adjudication will be required therein. This settlement will necessitate the return by the state to insurance companies of the amount of tax upon such sums as have been reported in the item of dividends either paid in cash or applied to reduce annual premiums. The amount of such refunds has not been determined. The Insurance Commissioner is now making a check from his record for this purpose.

The total amount involved in these suits is \$1,698,814.46 but the total of refunds should be considerably less than half of this sum for the reason that only a part of the insurance companies' contentions were upheld in the decision. This represents an obligation that has been accruing against the state since 1912 and is on account of moneys paid in and used during previous administrations except such of it as attaches to the single year 1923, but notwithstanding that it is a debt for which your administration is not responsible, it is a proper claim and provision should be made for its discharge. A definite claim will, no doubt, be presented to the legislature covering the item with provision that the refund may be extended over a period of years.

MOTOR VEHICLE FUEL TAX.

This source of revenue newly adopted in 1923 and effective since October first of that year, for the purpose of producing income for the upkeep and replacement of highways, has, because of the obvious equity of its distribution, proven less objectionable than any of the other forms of taxation. This source has had for the total of its tax extension for the four quarters it has been in operation, the sum of \$13,887,823.40.

Not all of this has been collected, for the reason that certain items of deliveries on contracts are in dispute and suit now in court wherein the Richfield Oil Company is defendant and the state plaintiff, will result in a determination of all of the disputed points on these deliveries. This fuel tax will represent in income at the two-cent rate, with a favorable decision in the above suits, a yearly revenue of at least sixteen million dollars from present indications, and with registration and weight fees now being collected by the State Motor Vehicle Department, supplemented further by the motor transportation tax, will represent a total collection finally paid by the motor vehicle owner and operator of upward of twenty-one million dollars annually, thus showing an increased income from this source under the 1923 acts, of upward of twelve million dollars in excess of what it formerly contributed.

The motor vehicle fuel tax is being collected at or very slightly removed from the source of production, which only necessitates dealing with 65 to 70 distributors for any quarter. This limited number of collections to be dealt with makes the cost of collection and such checking of returns as has been found necessary, a gratifying small one as

compared to the amounts collected, as well as to costs for other sources of revenue.

The actual cost of applying the law to determine the amount of tax and extend it upon the roll, has been less than one-tenth of one per cent of the amount involved.

This does not include the Controller's cost of handling refunds which have amounted to date, to approximately eleven thousand dollars and which, because of the large amount of clerical work in connection with auditing and proving claims therefor, may necessarily increase somewhat. The total of refunds to date made to persons who purchased these commodities for other than highway purposes during the four quarters the law has been in operation, has been \$667,365.10.

MOTOR TRANSPORTATION LICENSE TAX.

The motor transportation license tax has not been so fully organized for a sufficient period as to prove just what income it will produce or just what its cost of collection will be. Experience to date, however, has proven as was expected, that it will be much more expensive of enforcement relatively than is true of the motor vehicle fuel tax, yet not necessarily more so than some of the other revenue sources.

Much difficulty has been encountered in the administration of this tax through the failure of operators to understand that they were subject to its provisions. This has been exaggerated too by reason of the misunderstanding of the officers of some of the associations of these operators who were depended upon by their members to advise them and who gave out the advice that the law applied only to franchise carriers, thus causing the operator, innocent on his own account, to refuse or neglect to comply with requests to register and declare his activities. This made it necessary to hold a series of hearings throughout the southern part of the state to overcome this condition and caused some temporary opposition to the license tax which, however, has practically all passed and for the most part operators are now cooperating well with the department, with the result that the application of the act is now more rapidly nearing uniformity than in the beginning.

It seems only fair to say here that in this respect the important operators, who offered determined opposition to the adoption of the law, have from the beginning almost uniformly cooperated fully in its administration both individually and through their organizations.

Amendments made to this act in the closing hours of the session with limited time for their consideration by the legislature, resulted in some discrepancies and handicaps to administration creeping in, which will probably be remedied at the present session.

On the whole, while it seems safe to say that, like practically every revenue law, it will always show some minor impossibilities of uniform administration, it is a logical and equitable provision and is quite generally so accepted by those to whom it applies and who are required to pay the tax.

Just at the time of this writing we are advised that administration of this act has met another delay at least in the form of a decision of a superior court in the county of Fresno, declaring it unconstitutional on account of some of the exemptions inserted in the closing hours of its consideration.

The administration of the act is being interfered with considerably by this decision but is still being insisted upon by the department pending result of an appeal by the Attorney General.

MASSACHUSETTS TRUST DOCTRINE OR COMMON LAW TRUST.

The above form of organizations is becoming quite common in this state and since it comes directly into competition with, as well as frequently takes the place of, California business corporations which are required to pay a franchise tax in this state, it seems proper to put such organization on the same or a similar basis and require a business tax from them also. There is no provision in the present law which will seem to reach this class and while the amount of income to be derived from, providing that they be taxed in a manner or amount similar to other business taxes, will be small, the fact that they enjoy the same privileges and advantages as other business organizations which are required to pay a tax for such privileges, seems to indicate that equitable treatment requires a tax or license for them also.

In the following pages is set forth the usual statistical information on agriculture, live stock, city and county values and state revenue sources.

Respectfully submitted.

SPECIAL REPORT OF ADDITIONAL DATA ON RELATIVE TAX BURDENS REQUIRED UNDER SECTION 3664e, POLITICAL CODE.

THE AVERAGE BURDEN OF LOCAL TAXATION.

The average tax burden for the single year 1924 upon each \$100 of actual value of property taxed for local purposes, all counties included, has been determined by this board to be \$1.81 or 1.81 per cent.

This average tax burden is not the average of the tax rates applied to the assessed values of property, but represents the ratio of the total taxes of all kinds paid upon properties so taxed, as compared to the total value of all of the property of the state as determined by appraisement.

Property taxed in California on an ad valorem basis is not assessed at its full market value; in fact, is assessed on an average at a little less than 50 per cent of its market value.

In order to determine the percentage used for this purpose in the different counties, it was necessary, first to determine the actual value of selected properties in each county, for comparison with the assessment on the same property, after which the percentage thus determined was applied to the total assessed value of the county to determine the total actual value of the county. The actual values of the several counties were then totaled to arrive at the total actual value of all of the property in the state, this total actual value being necessary for comparison with the total amount of taxes of all kinds paid on such property to determine the percentage of tax burden or the amount of tax paid upon a given value of property.

SOURCES OF INFORMATION.

For the purpose of this determination, various sources of information were tested as to their reliability or otherwise, as an indication of the values of property.

1. *Information concerning sales of property in probate proceedings.*

This source was found to be of some value, but its value was limited because of the comparatively small number of sales of this kind within a period when they could be compared with a given assessment, or be reasonably supposed to have had little change in value, and also by the very limited distribution of the properties involved in such sales. Such information was useful in checking and verifying the larger and more widely distributed information secured by appraisements.

2. *Selling prices of property as indicated by the revenue stamps attached to the evidence of transfer, plus the face value of mortgages, et cetera, as shown by the records.*

This source of information was found of little value, for the reason that it early became apparent that the revenue stamps attached are

not a reliable index of the consideration realized in the sale, for the reason:

First—That it quite frequently happens that additional stamps are attached by buyers for speculation for the purpose of showing the prospective purchaser to whom they afterward attempt to sell the same property, a cost price to themselves which compares favorably with the price being asked.

Second—The law requiring that revenue stamps be placed upon deeds recites that a 50-cent stamp shall be attached for each \$500 selling price represented, or portion thereof. It follows that in small sales a deed showing two 50-cent stamps may represent a consideration of \$550 or \$1,000, a variation of almost 100 per cent. Of course, this percentage would be less as the amount of the sale increased until in the very large sales the percentage would become negligible; but, taking the average consideration in all deeds filed over the state for a given day or period, the percentage of variation is so large as to render the data valueless, and eliminating all of the smaller deeds to avoid this objection would be manifestly unfair, as practically only one class of properties, the very extensive, would be represented in the survey.

Third—Many deeds evidence transfers representing the exchange of one property for another, rather than the sale of property for cash or for terms on a cash basis, and it is the rule, rather than the exception in such cases, that the parties to the transactions both put a price upon their properties for exchange purposes much in excess of what they would be willing to take cash, oftentimes double the cash price; the exchange being made by investigation of the two properties by the prospective purchasers and the deed showing the inflated exchange price. An attempt to eliminate these transactions is ineffective because while some of them indicate upon the evidence of transfer that an exchange of property is being made, a large percentage of them do not evidence the fact that such is true or that they are other than a bona fide sale.

Fourth—Since the law requires that stamps be attached to show only that portion of the selling price remaining after the encumbrance deduction, in all of those cases where mortgages are of record against the properties being sold, it becomes necessary to add to the selling price indicated by the stamps attached the value of the mortgage. And as mortgage records do not show partial payments upon such mortgages, it follows that taking the face value of the mortgage as shown by the record very frequently shows a much larger amount than remained unpaid on such mortgage, which the purchaser assumed, with the result that the aggregate of the selling price indicated by stamps, plus the mortgage, would show a consideration much in excess of that received.

Fifth—Under the California law the true consideration need not be, and usually is not, expressed in the deed; most deeds simply reciting a nominal consideration.

3. *Appraisement of selected property in various counties verified by check and comparison with the other sources.*

4. *Information upon relative values accumulated by the State Board of Equalization for its use in preparation for equalization and in the investigation of properties for classification and for report to legisla-*

ture, et cetera, together with conferences with real estate men, appraisers and others known to have a fair knowledge of values in the particular community under investigation, and statements from county assessors of the percentage attempted to be reached in fixing values for taxation.

CONSIDERATION OF PROPERTIES FOR APPRAISEMENT.

Those properties taxed upon an ad valorem basis for county and city purposes are valued for taxation by the county assessor, and his assistants, of the county in which the property is located.

For this purpose, the counties and cities are divided into districts, and a deputy assessor is assigned to each district. The deputy assessor lists for assessment all of the properties in his district, and places a value thereon. These assessment lists are then returned to the office of the assessor, and he exercises final judgment as to the values so fixed, but in a very large percentage of cases, whether the assessed value so fixed be changed or remain the same, it still follows that the judgment of the deputy assessor is reflected therein. This fact makes it necessary, in order to get a representative result by appraisement or otherwise, to so distribute the properties selected as to cover as many different districts as practical. Since these districts change and are divided or combined to keep pace with changing conditions, it was deemed advisable to make new selection of property to insure this representation.

SELECTION OF PROPERTY FOR APPRAISEMENT.

As a basis for the selection of properties to be appraised for this determination, the records were used to determine the percentage of all of the property of the state located in each county, and within that county the percentage of the property inside incorporated cities, and outside incorporated cities; and within incorporated cities, the percentage of property represented by real estate as distinguished from improvements, personal property, money and solvent credits.

The selections for appraisement were then made, so far as practical, to conform to these relative indications, but were varied by the selection of additional properties in any locality where it seemed necessary to do so in order to verify the data at first secured or to satisfy ourselves that the findings were actually representative of conditions existing there. With this information as a basis, the various localities, cities, and counties under consideration were visited and personal selections were made of the properties to be appraised, in order that it might be fairly distributed as to the different sections of the communities and fairly representative as to business property, residential property, improvements and vacant property, and as to the changing conditions within the locality so far as that could be ascertained.

Properties were selected and determinations made in counties which contain in the aggregate more than 90 per cent of the total of assessed value of property in the state. Normal or representative properties were at all times attempted to be selected. Any subdivision in which values had not become stable were avoided, as were properties having a peculiar indication of possible future values or sentimental values.

SELECTION OF APPRAISERS.

Since the data here presented necessarily involves the tax rate of banks, and many of the banks usually join in presenting opposing data whenever tax rates are under consideration, it was not considered advisable to procure appraisements from or through the banks.

The appraisers were therefore selected by the members of the State Board of Equalization, who did so by personal conference and inquiry as to the qualifications of each individual to be employed. Wherever practicable, appraisers were selected from realty operators or realty boards because of their familiarity with property values, or appraisers were secured for their experience as such, and in most instances no less than two were used in a given county, in order that their combined judgment might be had.

The list of properties to be appraised was then furnished the appraiser with direction that he fix his values thereon in accordance with his idea of the condition and value of the property on the first Monday in March immediately preceding; this date being selected for the reason that it marks the date upon which the tax attaches as a lien and the date to which the assessed values relate. These appraisements were then gone over carefully by said state board in comparison with the information secured from other sources, and where any considerable discrepancy was manifested a recheck of those particular pieces was made and verified.

VALUATIONS IN COUNTIES WHERE NO APPRAISEMENTS WERE MADE.

In the few small remaining counties where no appraisements were made the determination of the ratio of assessed to actual value, and thereupon the actual value of the property of such counties, was made upon information obtained by conference with real estate men, appraisers, bankers, and property owners having a knowledge of values therein.

These counties represent such a very small per cent of all of the property in the state, that an error of the widest probable margin in the determination of percentages therein would vary the average percentage of tax burden almost negligibly, in fact very much less than the range of possible difference that might occur on a new determination by the same methods for the entire state, using a different list of properties selected with equal care.

PERCENTAGES DETERMINED.

By comparison of the appraised value of the properties selected with the county assessed value of the same property percentages of assessed to actual value were determined for:

First—Improvements inside cities. *Second*—Real estate inside cities. *Third*—Improvements and real estate outside cities for each county. These percentages were then used against the total of the assessment within the county for the classes of property indicated to determine the total actual value for such property, and the totals of actual values so determined were combined to ascertain the total actual value of all property within the state.

The total amount of taxes levied in each county, including city, county, special road, special school, sanitary and all other special taxes which entered into the special tax rate, including all sums levied "for county and municipal taxation" was ascertained. This total of all taxes was then divided by the actual value of property to determine the average tax burden or average tax ratio.

REVISION AND VERIFICATION OF APPRAISEMENTS.

All appraisements were gone over carefully to cure as far as possible any discovered error, and all questionable items were verified as far as could be, by submitting them to the assessors or appraisers, or both, and by comparison with other information.

Only a very small percentage showed any considerable spread of difference over that shown by the other properties in the same counties. In these cases the apparent discrepancy was usually discovered to be a mistake in the location of the property, the appraisalment of all of the improvements of a given property owner as against only a portion of the real estate of that property owner where a portion of such improvements were located upon and assessed with other real estate not appraised, or occasionally in the appraisements of improvements which were not in existence on the first Monday of March, or in the exact opposite case where improvements assessed and in existence on the first Monday of March had been removed and the appraisers did not discover that the removal had occurred after that date.

TABULATED STATEMENTS.

In the tabulated statements which follow in this report are set forth the data supporting the conclusions reached with respect to the average tax burden.

TOTAL AD VALOREM TAXES.

The total of all taxes collected by the cities and counties amounted to \$219,468,369.70. This total is to be considered in connection with the total actual value of the property of the state as established by this investigation.

INCREASES AND DECREASES IN ASSESSMENT ROLLS.

The total assessment of property in this State of California, taxed upon an ad valorem basis, shows a value for the year 1924 of \$12,123,970,808. This represents a total for the assessment rolls for the 58 counties of the state (not including operative property). This property is segregated into the following classes: Land, improvements, personal property, money and credits.

1924 ROLLS ANALYZED.

The total of the combined assessment rolls of all of the counties of the state for the year 1924 showed an increase of assessed value over that of the preceding year of 17.01 per cent. This percentage is the result of the net figure, the total of gains in some counties over losses in others, forty-nine counties showing an increase and the remaining nine counties showing a decrease.

Investigation disclosed that these decreases were confined to the smaller counties and were only slight. It also showed that such decreases resulted from the falling off of actual value of certain classes of property, notably livestock. Some of the counties show a greatly reduced number of this class of property for the year 1924.

COMPARATIVE INCREASES.

An analysis of these increases for the year 1924 shows as usual that improvements increase more rapidly than does land with personal property varying between increases and decreases dependent upon conditions. The reason for this larger increase in improvements is manifest, since practically all of the landed property of the state is already upon the assessment rolls and the only increases that occur are normal increases in value, while erection of new improvements brings into being new properties and new property value. The depreciation allowed upon existing improvements in fixing the assessed value thereon will allow but a small percentage of the total value of new improvements to be reflected in this percentage of increase.

FIRE INSURANCE.

An attempt is sometimes made to compare the outstanding fire insurance in the state with the assessment upon the classes of property usually insured, for the purpose of showing an indication of the ratio of assessed to actual values upon such property, especially improvements.

The best tabulation that could be made in such a comparison would be so far short of an accurate or a complete showing that it would hardly be fair to offer it as proving or even indicating anything in this connection.

The difficulty arises from the fact that under the tax system of California, a large percentage of properties usually insured can not be assessed—are not assessable. This class of nonassessable properties includes growing crops insured, matured insured crops in storage, which crops were grown and harvested after assessment time, fire insurance on vessels and cargoes (vessels of more than 50 tons burden not assessable in California), church, college, school and other public properties not assessable, all improvements of public service utilities not taxed on an ad valorem basis, including railroad terminals, depots, warehouses and other buildings, power houses, rolling stock, equipment, et cetera, gas plants, stores, et cetera.

Before a comparison could be made of these items there would have to be deducted from the latter amount the value of personal property not ordinarily insured, which value could only be arrived at by a very indefinite estimate, and then it would be necessary to assume that all of the other properties within the state were insured. There would also have to be deducted from the various items of insurance in force the total of all insurance outstanding against all of the properties not assessed or not assessable.

The inevitable inaccuracy of the computation is so apparent that any results that might be reached are not shown, the matter being mentioned to call attention to its lack of value.

1924—INSIDE PROPERTIES—COUNTIES APPRAISED.

(Table shows separate percentage assessed to actual value of real estate and improvements.)

| County | Real estate appraised | Real estate assessed | Real estate, per cent | Appraised improve- ments | Assessed improve- ments | Improve- ments, per cent |

LETTER OF TRANSMITTAL.

SACRAMENTO, CALIFORNIA, September 1, 1924.

HON. FRIEND WM. RICHARDSON,
Governor of California,
Sacramento, California.

DEAR SIR: In compliance with provisions of the statutes, I have the honor to submit herewith my report as Director of Institutions for the biennium ending June 30, 1924.

On September 10, 1922, Dr. John A. Reily, Director of Institutions, resigned and the work of the Department was carried on by Mr. E. G. Twogood, as acting director, until October 10, 1923, when by your appointment I assumed the office.

In assuming the position, I did so with a sincere desire to be of some service to the state and to humanity. In conducting this department, I have endeavored to do so in an economical manner, but careful that it should be constructive economy and not destructive.

POPULATION IN STATE INSTITUTIONS.

There has been the usual steady increase in the population of the various institutions, especially in state hospitals for the insane. It is gratifying, however, to note that, notwithstanding the large increase in the population of the state, the percentage of increase in the hospitals has not been so great as during the previous biennium. On June 30, 1922, there were 11,291 patients in the six state hospitals; on June 30, 1924, there were 11,637 patients, an increase of only 346, or about 3 per cent, while the increase for the previous biennium was 936, or about 9 per cent. The increase in admissions during the biennial period ending June 30, 1922, was approximately 7 per cent; during the last biennium the increase was approximately $4\frac{1}{2}$ per cent. The lowering of the percentage of increase for the biennium just ended is therefore not altogether due to decrease in admissions but is rather the result of increased vigilance on the part of the hospital authorities and the deportation bureau of this department in returning to their respective states and countries nonresidents and aliens who have no legal residence in California. The importance of this work can not be too greatly stressed, and it is to be hoped that sufficient funds will be appropriated by the coming legislature to carry on the work even to a higher degree.

CAPACITY OF HOSPITALS.

On another page appears a table showing the capacity and population of the several hospitals, and from this statement it will be seen that on July 1, 1924, the combined normal capacity of all the hospitals was 10,394, and the total population was 11,637, or an excess of 1243. This condition was caused partly by the practical destruction by an earthquake of the large building at Patton housing nearly 600 patients. However, the condition is fast being remedied. During the past two years there have been completed new buildings sufficient to accommo-

date an additional population of 1276, and additional buildings are now under construction sufficient to accommodate 260 more. We hope the legislature will be able to appropriate funds for sufficient additional buildings so that the crowded condition will be entirely overcome.

It is my opinion that no state hospital should accommodate more than 2500 patients, and this opinion is shared by all the superintendents of the hospitals. A larger population becomes unwieldy, and it is not thought that as good care can be given. Economy in the support and maintenance of an institution on account of numbers will come up to a certain point, but to go beyond that point, which we have placed at 2500, will not prove economical.

Three of our hospitals, viz, Napa, Stockton, and Southern California, have now reached that point, and I believe that what additional capacity is provided should be at Mendocino, Agnews and Norwalk.

BUILDING IMPROVEMENTS.

During the past two years many splendid improvements have been made. Among them are the following:

Agnews State Hospital.

A splendid two-story reinforced concrete building to house 80 employees.

Napa State Hospital.

A fine two-story reinforced concrete building to house 120 male patients.

A one-story building to accommodate 80 female patients.

Two large fireproof buildings used for industrial therapy.

Mendocino State Hospital.

Five wards in the main building have been completely remodeled, making them light, airy and in every way modern.

At the present time there is under construction a receiving and treatment building to accommodate 60 patients.

Norwalk State Hospital.

Four two-story reinforced concrete buildings to accommodate 516 patients.

Boiler plant remodeled and capacity practically doubled.

Stockton State Hospital.

Reinforced concrete psychopathic building to accommodate 120 patients.

Two reinforced concrete buildings at the farm to accommodate 200 patients.

Southern California State Hospital.

One two-story and four one-story buildings accommodating 440 patients.

Sonoma State Home.

Reinforced concrete assembly hall to seat 1438 persons.

Reinforced concrete school building containing six schoolrooms, including domestic science.

Two buildings to accommodate nurses and attendants.

One cottage to accommodate 60 girls.

Two additional cottages are now under construction. These will accommodate 160 patients.

Whittier State School.

A beautiful auditorium to seat 600 persons.

Two cottages accommodating 90 boys.

Preston School of Industry.

A new laundry building, and a new machine and automobile shop. A large percentage of this work was done by the boys of the school.

Planing mill, and carpenter shop remodeled.

One cottage for 45 boys.

Industrial Home for the Adult Blind.

A building to accommodate employees.

A new industrial building which is light and airy and well equipped. Heretofore, the inmates were compelled to work in an old, dark and dangerous frame building.

A new modern boiler house, a smoking and lounging room for male inmates, and an assembly and amusement hall.

This is the first year the inmates of this home ever had modern steam heat for their buildings; the first time they ever had an assembly hall where they could congregate to listen to music and the radio which has been installed, and the first time the men had any place other than outdoors or in their rooms to sit and smoke during the evening. They are improvements which should have been made years ago.

Many other improvements have been made, but the above refers to new buildings only.

PER CAPITA COST OF MAINTENANCE.

By reference to tables printed elsewhere in this report, it will be seen that the per capita cost of the total maintenance of each institution has been materially reduced, the greatest reduction being in the cost of salaries and wages.

This has been accomplished not at the expense of the wards of the state, for they have been better housed, have been given more comforts and amusements, have been as well clothed and fed, and have been given as good medical care and attention—perhaps better, for much new equipment has been purchased. But the lower per capita is due to the elimination of many unnecessary positions, better cooperation between institutions, better coordination, and above all to the improvement of and larger production from the farms, orchards, dairies, hog and poultry plants.

The average per capita cost for maintenance of all the institutions in this department (eliminating the Farm for Women and Pacific Colony, which were closed) for the seventy-fifth fiscal year (ending June 30, 1924) was \$277.10, while for the seventy-fourth fiscal year (ending June 30, 1923) it was, for the same institutions, \$298.81. On an average population of 14,091, which was the population during the past year, this resulted in an actual saving to the state of \$307,324.71.

The above does not include expenditures for new buildings, nor does it take credit for the \$2,578,911.98 revenue by the institutions and paid into the state treasury; but is the total gross expenditure for all maintenance and support.

COLLECTIONS AT STATE HOSPITALS.

The collections for the contingent funds of the state hospitals for the insane for the year ending June 30, 1923, show an increase of approximately \$50,000 over the previous year, as will be seen by the tables appended hereto. The collections for the biennium ending June 30, 1924, however, are approximately \$10,000 less than the collections for the previous biennium. This is due to the fact that a large number of

U. S. Veterans' Bureau patients were removed from the state hospitals to the U. S. Veterans' Hospital at Palo Alto, California. The most marked effect of this removal will be seen in the report of the Mendocino State Hospital, as about 250 Veterans' Bureau patients were removed from this hospital.

The total collections for the contingent funds of the six state hospitals amounted to \$1,158,239.86. The total revenue paid into the state treasury on account of this department during the biennium amounted to \$2,578,922.98.

There was collected by this department for commitment and transportation expenses during the biennium the sum of \$22,860.55, an increase of \$3,594.94 over the previous two years.

FARMING OPERATIONS.

It was unfortunate that when most of our institutions were established the idea seems to have been prevalent that the function of an institution was merely custodial, with the result that, while large acreages were purchased, in many instances the soil was of very poor quality and of little value for agricultural purposes, and at the time little regard was paid to securing an ample supply of water. Since then, however, this condition has been very greatly remedied by the purchase by the state of many acres of splendid agricultural land.

At nine of the institutions in this department are maintained dairies, poultry yards and hog ranches. Vegetable gardens are maintained at all of them. Many acres of orchards have been and are being planted. It is my hope and aim that soon all the vegetables, fruit, milk, eggs, ham and bacon consumed in our institutions will be produced on our own farms. It will provide better food and wholesome occupation for many of the wards of the state, and will be an economy worth while.

The last year was one of the least rainfall the state has ever known, and, owing to the failure of the state to secure an ample original water supply as above referred to, it was necessary for this department to expend many thousands of dollars to augment the water supply, not only for agricultural purposes, but in some instances for domestic use. But while some of our crops were short, yet none of our orchards were damaged nor did any institution actually suffer for want of water. Notwithstanding the shortage of some of our crops, the institutions in this department produced during the year ending June 30, 1924, vegetables to the amount of 5,131,949 pounds; 320,951 pounds of pork; 672,911 gallons of milk; 1,773,465 eggs. The total products of the farms during the one year amounted in value to \$701,275.31 at wholesale prices. The cost of production of this is all included in the statement showing the cost of maintenance of the various institutions.

All of the above products are consumed at the institutions and materially reduce the state's cost of maintenance.

INDUSTRIAL FARM FOR WOMEN.

While the original appropriation for this institution was made in 1919, it was not until January, 1922, that the farm was formally opened. A few commitments were made, but room was limited, as no buildings other than the one purchased with the property had been

provided, and naturally the per capita was exceedingly high. Money for a hospital building was appropriated by the legislature of 1921 and this building was completed early in 1923 with a capacity of about thirty-six patients. In March, 1923, the main building which had been purchased with the property was destroyed by fire. As many of the inmates as could be housed in the hospital building were taken care of there and the remainder were transferred to Sonoma State Home and to Napa State Hospital. The legislature of 1923 made no appropriation for the farm, aside from one for the services of a caretaker, and the institution therefore was closed on June 30, 1923, after the few remaining inmates had been paroled and discharged.

This is called the "Industrial Farm," but it is a misnomer. There are in the entire place not to exceed thirty acres of farming land, and even that is not of the best. It is situated in the foothills, and if intended merely as a custodial institution, would be admirably located, but as a farm it is of little value.

Through the Department of Public Works, we have been investigating the supply of water to ascertain, if possible, how large an institution could be maintained at this place. So far the department has been unwilling to report that sufficient water can be developed to maintain an institution even with a population as small as 200 inmates.

Considering the population of the state and its steady increase, it would be unwise and uneconomical to establish this "farm" or any other state institution in any location which would be incapable of caring for a population of at least 2000 persons. To do so would place an unnecessary and unjustifiable burden on the state.

NOTE.—Since the above was written, the buildings at the Industrial Farm for Women have been taken over by the Sonoma State Home, and an epileptic colony has been established under the management of the home, where we are now caring for fifty patients.

PACIFIC COLONY.

This institution was opened for the reception of inmates on March 20, 1921, with one building having a capacity of about fifty patients. A number of boys were transferred from the Sonoma State Home and Whittier State School to the colony, and a few were subsequently committed. Owing ~~to~~ the lack of sufficient water supply, no further development of the site was attempted, and on account of the high per capita cost, due to the small number of inmates, recommendation was made in the last report that the institution be closed until such time as it might be developed on another site, with greater capacity. This procedure was followed and on January 15, 1923, the nineteen inmates who still remained were transferred to Sonoma State Home, and Pacific Colony was closed. Subsequently the buildings and about twenty acres of land were leased to the Welfare Association of Los Angeles, who have been conducting a school for boys since that time.

NOTE.—Since the above was written it has been determined to develop Pacific Colony on the 200-acre tract situated near Walnut, California, and building plans are under way. It is probable that the institution will be ready to receive inmates about October, 1925.

PRIVATE SANATORIUMS.

The statutes provide that "no person, association, or corporation, must establish or keep an institution for the care, custody or treatment

of the insane, alleged insane or other incompetent persons referred to in this act for compensation or hire, without first obtaining a license therefor from the commission." (Department.)

The law also provides that the department may examine and supervise these institutions and may for cause amend or revoke the license.

There are now some fifty of these private institutions licensed by this department. I believe there are others that should be licensed. No license fee whatever is paid by these private institutions. In other states they are required to pay a license fee and should be required to do so in this state. Some provision should also be made so as to enable this department to exercise more and better supervision than has been possible in the past.

ASSISTANCE FROM OUTSIDE AGENCIES, SOCIETIES AND INDIVIDUALS.

During the past biennium various societies and individuals have rendered valuable aid and contributed generously to the comfort and amusement of the wards of the state in the different institutions.

I desire to make especial mention of the "Jewish Committee for Personal Service in State Institutions." This committee, through their secretary, visits the institutions and confers with members of the medical staff. They have taken many patients of their religious belief out of the institutions and found them good homes.

The Knights of Columbus visit the institutions regularly and leave for the use of the ex-service patients such personal luxuries as candy, cigars and cigarettes.

The Los Angeles County authorities have been extremely cooperative. Mrs. Jean G. McCracken, psychopathic parole officer of that county, has been of invaluable service to the superintendents of both the Southern California and Norwalk State hospitals. The Psychopathic Society, the county hospital and the county farm have all been most helpful.

Mrs. W. S. James of Los Angeles has always taken a very great interest in the Norwalk State Hospital, and only recently had installed at her own expense four complete sets of radio, which were placed in four of the buildings for patients.

Dr. Eva C. Reid, who at one time was a member of the staff of this department, although not now connected with the institutions, has continued to render most valuable aid in after-care work.

The P. E. O. sisterhoods of Alhambra, Glendale and Burbank, and the J. O. C. Class of the Presbyterian Church of Santa Monica have been very helpful to the California School for Girls.

The Rotary, Lions and Kiwanis clubs, the Y. M. C. A. and the district office of the Boy Scouts have all taken a great interest in the boys of Whittier and have assisted materially in the great work Superintendent Nelles has to do. A notable assistance to the school comes from the Whittier Dentists' Association, who contribute one hour each week for emergency dental cases.

To all the above I desire at this time to express my thanks and appreciation for the interest shown.

SUPERINTENDENTS.

During my incumbency of this office there has been but one change in the office of superintendent at any of the institutions in this department. On July 1, 1924, Dr. C. F. Appelgate resigned as superintendent of the Norwalk State Hospital, and Dr. Edwin Wayte, who had been first assistant physician at the Southern California State Hospital for many years, was appointed to fill the vacancy.

I have received splendid cooperation from all of them and the success of this department is and will continue to be due entirely to the assistance received from them and their business managers.

Reports of the various superintendents and tables of statistics are attached hereto.

Respectfully submitted.

W. D. WAGNER,
Director of Institutions.

| Property and equipment..... | 127 04 | |
| Prior year's expense..... | | 154 50 |
| Total expenditures..... | | 50,029 46 |
| Excess accumulated income, seventy-fifth fiscal year..... | | \$13,893 55 |

NOTE.—This statement shows that for Current Year Expenditures \$19,460.54 more was expended in the seventy-fifth fiscal year than in the seventy-fourth fiscal year. However, an item in Service and Expense of \$27,818.65 for deportation in the seventy-fifth fiscal year was not included in seventy-fourth fiscal year expenditures, as this cost was paid for by the various institutions in the seventy-fourth fiscal year. Not considering this item, the expenditures for the seventy-fifth fiscal year would be \$8,358.11 less than for the seventy-fourth fiscal year.

REPORT OF DEPORTATION AGENT.

September 1, 1924.

HON. W. D. WAGNER,
Director of Institutions,
Sacramento, California.

DEAR SIR: As your deportation agent it devolves upon me to submit a report of the work accomplished during the past biennium. The activities of the department are constantly increasing and I am pleased to report a material increase in the number of aliens deported to their native countries and nonresidents returned to their homes in other states and countries, much to the relief of our state institutions.

ALIENS.

On my return from an eastern trip in April, 1922, I took occasion to go to Washington, D. C., and call on the Commissioner General of Immigration. The crowded condition of our institutions was stressed and request made of the Commissioner, that if possible to do so, deportations be speeded up. Mr. W. W. Husband, the Commissioner, received me courteously and promised his support. His response was felt almost immediately and the number of deportations for the past fiscal year shows an increase of 120 per cent, while the good work continues. The immigration authorities for the districts of northern and southern California are rendering their active cooperation and I am taking this opportunity, on behalf of this Department, to sincerely thank them and Mr. Husband for their efforts in our behalf. During the period 181 aliens were deported.

NONRESIDENTS.

By an amendment to our law approved by the Governor May 2, 1923, we are authorized to return to their homes in other states inmates of our reform schools. The proposition was somewhat in the nature of an experiment, some doubt existing as to whether the deportees would remain away from California, and as to the propriety of giving these juvenile delinquents their freedom. Thus far the experiment has proved a wonderful success, not alone as a relief to our fiscal burdens, but in giving the boys a chance to "make good" far from the scene of their delinquencies. Mr. O. H. Close, superintendent of the Preston School of Industry, realizing the importance of the move, has energetically and intelligently handled the situation and the success is largely his. Our plan is to locate the parents of the boys, initiate correspondence to ascertain their attitude and, if possible, financial assistance for the return of the boys to their homes. Of 158 boys thus returned during the biennium but two have returned to California and reports have been received from many indicating they are taking advantage of the opportunity afforded them, after the errors of the past. This, to us, is a source of pardonable pride, giving this large number of healthy red-blooded young men an opportunity to redeem themselves. During the biennium 448 nonresidents were sent to their homes in other states and countries. It might be apropos to present our views as to why California is called upon to afford asylum to so many nonresidents.

Our rapid growth in population is no doubt responsible for a major portion of it and our climatic conditions for the remainder. The "family doctor," without any intention or desire on our part, to discredit him, has little or no knowledge of psychiatry, as it is a specialty in itself. The doctor is called in to attend a case; he scrutinizes the patient and attempts a diagnosis; he is puzzled at its aspects and tries all the well known remedies at his command without results; finally, he falls back on his only resource and suggests a change of climate, recommending California. This is no idle theory—we are confronted with it every day by relatives and friends beseeching us to permit their unfortunates to remain in California, the greatest sanitarium in America. Of course we would like to share the munificent benefits of this great sanitarium with all the unfortunates who are attracted thereto, but the burden of such a charity is too great and for our own protection we must insist that each state assume the care of its own defectives. The following table shows the number of non-residents deported from the several institutions during the biennium:

| | <i>Year ended June 30, 1923</i> | <i>Year ended June 30, 1924</i> | <i>Total</i> |
|---------------------------|-------------------------------------|-------------------------------------|--------------|
| Stockton ----- | 36 | 45 | 81 |
| Napa ----- | 35 | 27 | 72 |
| Agnews ----- | 14 | 15 | 29 |
| Mendocino ----- | 7 | 10 | 17 |
| Southern California ----- | 67 | 51 | 118 |
| Norwalk ----- | 20 | 31 | 51 |
| Preston ----- | 12 | 136 | 148 |
| Whittier ----- | -- | 1 | 1 |
| Sonoma ----- | -- | 1 | 1 |
| Totals ----- | 191 | 317 | 508 |

ECONOMIC ADVANTAGES OF DEPORTATIONS.

California, like all the other populous states of the Union, is confronted with the problem of housing and caring for an ever increasing number of defectives and delinquents. The population of our state hospitals for the insane increased 346 during the biennium notwithstanding the deportation of 522 inmates thereof by the federal and state governments. It is greatly to our advantage to foster federal deportations as it costs us nothing and our state and country are relieved of the burden of their care for all time. The deportation of nonresidents is quite an item of expense to us—the mental cases costing about \$120 per capita and the delinquents about \$100 per capita. However, when we take into consideration the net saving of \$2,500 for every defective deported and \$800 for each delinquent, the economy of the proposition is unassailable. Just imagine, if you are familiar with the present crowded condition of our hospitals and the Preston School, what the conditions would be without the relief by deportations. It is more logical to expend a few thousand dollars for deportations than to expend large sums for new structures for housing purposes. Your attention is called to the accompanying tables for detailed information.

In closing permit me to thank you and the present administration for your unqualified support in a conscientious endeavor to execute my duties fairly and faithfully.

Respectfully,

CHAS. F. WAYMIRE,
Deportation Agent.

| Totals | 2,557 | ----- | *\$727,182 47 | ----- | \$2,069,810 00 | \$2,737,582 47 | \$214,495 00 | \$2,515,547 47 |

*This column merely shows the saving for one year. A conservative estimate of the average institutional life of an insane person is ten years; hence to arrive at the amount saved the total should be multiplied by ten.

REPORT OF SUPERINTENDENT OF THE CALIFORNIA SCHOOL FOR GIRLS.

VENTURA, CALIFORNIA.

TO W. D. WAGNER,

*Director Department of Institutions,
Sacramento, California.*

DEAR SIR: The California School for Girls entered upon the biennium ending June 30, 1924, thoroughly organized upon a definite educational basis, having as its chief objective civic responsibility and moral integrity.

During this biennial period certain standards have been maintained which have made possible an intensive study of methods best adapted to the work of reinterpreting life and citizenship to these juvenile offenders, whose education has so early in life been interrupted and diverted from normal channels.

The term "education" is used in its broadest sense and covers every phase of training that tends to create new ideals of social and home life and restore self respect to the individual.

In a majority of cases the girls who have become wards of the state are victims of a disordered and irresponsible home life. With no standards of conduct in moral responsibility or self control, with irregular and consequently noninterested school life, these girls at an early age have drifted into delinquency.

In the case of the older girl whose interests in life have advanced to a point that indicates a need of reformation rather than guidance, this school can do little more than present her with a clean bill of health and give such training as will enable the girl to earn an honest living if she so desires. In the meantime her presence is a constant menace to the younger girl, whose habits of delinquency are not so firmly rooted. It may be said here that the segregation of older girls with thoroughly established habits of vice would increase materially the opportunities for normal development of the girl still in the formative period.

In an institution especially designed for older girls more attention could be given to vocational and commercial enterprises, while maintaining an environment that would be uplifting in character and suited to the needs of older girls. Such training is not possible where it can be given only in connection with the educational training of the younger girls of legal school age who must be given adequate opportunity for school work that will at least approximate that of the public schools.

This, together with the decidedly harmful influences of the older offenders, constitutes the greatest need for such an institution which could be maintained with far less expense, than a school which must be wholly educational to be effective.

The present organization of this school is believed to be such as will inculcate through its various departments of training such basic principles of self control, self respect, and social responsibility, as have been omitted or neglected in the early training of the child.

It is the purpose of this report to deal chiefly with the results of two years operation upon this educational basis.

PERMANENT IMPROVEMENTS AND REPAIRS.

With the exception of a garage for employees' automobiles, no new buildings have been added to the group during the biennium.

All buildings have had sufficient attention and repairs to assure their preservation, and increase their usefulness to the greatest degree. Nearly every building has been painted externally and internally during the biennium. Battleship linoleum has been laid in kitchens and pass pantries of all cottages and in diet kitchen and clinic at the hospital.

Temporary wooden steps up the banks at four cottages have been replaced with permanent ones built of cement. Additional cement walks have been provided.

Sewing and school rooms in the cottages, no longer needed for that purpose since the completion of the school house, were altered and are now useful as teachers' sleeping rooms.

All draining boards were placed in first class condition, and several new water heaters were bought to replace leaky ones.

The change of fuel from coal to gas has been a splendid help in our work. Three of the old coal ranges with ovens burned out are in use in the open shed where the canning is done.

In addition to the repairs in the houses, there have been other improvements which should be mentioned. Changes have been made in our electric lines so that they conform to the State Railroad Commission's specifications. A few additional yard lights were installed.

The septic tank has had a thorough overhauling and a sprinkling filter added.

Additional fire hose and chemical extinguishers have been purchased. Irrigation lines were added to make it possible to irrigate all of our orchards when water is available. It has been necessary to replace all of the old outside water lines, as they have deteriorated to such an extent that they are no longer serviceable. Due to the chemical content of the water in this section gradual deposits, especially in hot water lines, are laid until the lumen of the pipe is completely filled. Visible pipes in some of the basements have been replaced and it is probable that the whole system will eventually require attention.

After the city of Ventura acquired the water system there was tremendous increase in the water bill for the institution. In order to take advantage of the irrigation rate, which was much less than the domestic rate, it was necessary to install seven meters. This materially reduced the bill, and was a splendid investment.

The two miles of road on the school grounds is in bad condition, although the men have repaired it as well as possible with the materials at hand.

FARM.

Constant cultivation has kept our young orchards in thrifty condition. The citrus trees, walnuts, and old apricots have produced abundantly both years. The young deciduous fruit trees are just beginning to bear.

A small vineyard, planted on a sloping hillside near the entrance, has added to the landscape effect and in time will give an abundant supply of grapes.

The vegetable garden has produced well. The hay crop was a failure this year, due to the lack of rain fall at the necessary time.

We have added six new sows and a boar of the Duroc Jersey variety to our piggery. They are in good health and producing as much as can be expected, as three of the sows were young.

There has been an improvement in the quality of our herd of dairy cows during the biennium.

MEDICAL DEPARTMENT.

The medical department has furthered the work of the institution by constant attention to the physical care of the individuals of the student body.

This department is in charge of a resident woman physician who has a nursing staff composed of a graduate, registered nurse, and five pupil nurses from the student body.

A feature of this department which needs special commendation is the attention given prophylactic measures. To build up the resistance of the individual by establishing regular habits of life with a sufficient well balanced ration, plenty of fresh air and sunshine accompanied by proper amount of exercise, is a most important factor of prophylaxis. Also, any girl reported sick, showing a rise in temperature or any untoward symptom, is immediately isolated in the hospital, and placed under close observation, being given specific treatment when indicated, or general symptomatic care. A sporadic case of diphtheria was discovered by this careful routine, and an epidemic probably averted.

All girls who do not show a recent scar, are vaccinated against smallpox. During the biennium, all employees were likewise vaccinated, due to the prevalence of smallpox in southern California.

About 65 per cent of the girls who are committed to this institution are afflicted with venereal disease. The most modern approved treatment is given this group. An increased number of douching compartments would be an advantage in this work. Also recommendation is made for replacement of those now in use by more sanitary and modern equipment.

The State Dentist spends every third month at the school attending to the dental work. Between visits, emergency work is cared for by a local dentist.

Aside from the care of the sick, the medical department affords nurses' training for a selected group of girls. Those who have been privileged to receive this training have benefited in many ways. They have left the school with means at hand to earn a living, and those who have had the necessary high school work have entered hospitals on the outside, and taken the regulation course for nurses. One girl is preparing to take the combined nursing and college work, and thereby obtain a degree in each branch.

EDUCATION.

All work of the institution is conducted upon an educational basis for which due credit is given. Experience has taught us that the requirement of a certain period of training in every department of home life is a decided asset to every girl, whatever her individual

talents or limitations may be. There is also a distinct satisfaction and stabilizing effect in the completion of a definite part of an organized whole.

Academic Work.

Assuming that delinquency has naturally involved an interruption and disarrangement of school work, an effort is made to determine as soon as possible the educational status of each girl. Many girls are misfits in the public school system to such an extent that it is often best to disregard entirely all previous grading, and place the student in accordance with mental ability and actual achievement.

School Survey.

During April, May, and June, 1924, through a friendly cooperation of former members of the Bureau of Juvenile Research, a survey was made with a view to a better organization of academic work. Included in the 134 girls studied were 82 who were already attending classes during this time, 35 entering girls who must be placed in September, and 17 girls who, for various reasons, were not at this time in school but who seemed possible candidates for further scholastic work. Ages for this group range from 10 years 10 months to 20 years. Mental ages on the Stanford-Binet, from 9-5 to 17-4. Educational ages on Stanford achievement test from 8-11 to 17-11. Median chronological age is 16-11, educational 13-10, mental 12-10. Seventy-one per cent show a higher educational age than one would expect from mental age.

The survey shows that especially good work has been done in the eighth grade and in the opportunity room where steady, all day application and patient teaching under the most favorable circumstances obtainable have accomplished most gratifying results.

Based upon these findings academic work is arranged as follows:

Five hours work daily for all girls under sixteen years of age who have not completed eighth grade.

Part-time classes for girls over sixteen.

Under the first division, or girls under sixteen years of age, are two separate divisions, viz:

1. Girls whose school record and achievement test indicate ability to do seventh and eighth grade work. These girls are placed in one group under a capable teacher who conforms to the state course of study, and gives individual and group instruction required to complete the work outlined for eighth grade as prescribed in the Ventura County course of study.

2. Girls under sixteen, who are not able to accomplish seventh and eighth grades, are grouped in what may be termed the opportunity class. The object of this class is two-fold. First, to sift out and prepare for eighth grade work all pupils who are able to do such work. Second, to provide training which will tend to discover vocational possibilities of pupils whose mental limitation makes further academic work inadvisable. In this class are taught fundamentals to meet individual needs up to and including sixth grade. In addition to this class work, instruction is to be given in basketry, elementary sewing, toy making, art, and a minimum of gardening with nature study as an objective.

By the splendid cooperation of the county superintendent and the county board of education, our eighth grade graduates receive the Ventura County diploma. Such graduates are eligible to high school without further credentials. Many of the girls from the three classes which have received such diplomas have availed themselves of this opportunity, and are making excellent records in various high schools. It is noteworthy to add that these girls, in most instances, are earning their board and room doing housework or acting as mother's helper.

Graduation, with all its attendant honor, has given impetus to school work, and has been a great incentive to further study. These exercises are the outstanding event of the entire school year. The girl graduates attired in white organdy dresses present the usual program of class history, prophecy, will, and valedictory. A specially trained chorus renders appropriate musical numbers, while the entire school in best attire assembles in the beautifully decorated auditorium to do honor to the achievement of the eighth grade.

Parents and guardians of the girls are urged to make a special effort to be present at the joyous event. Many visitors and friends of the school as a whole are made welcome. The class of June, 1924, was honored by the presence of Governor Friend Wm. Richardson, Mrs. Richardson, and their young son John. Governor Richardson made a brief address to the intense satisfaction of the class. An address was given by J. Harold Williams, Ph. D., noted educator and psychologist.

The concentration and effort required to maintain the high standards necessary for graduation constitutes a great stabilizing factor in the institution.

Girls who have completed eighth grade are eligible to commercial classes if they so desire. This course includes shorthand, typing, comptometry, bookkeeping, and classes in English and mathematics necessary to insure stenographers and bookkeepers of efficiency. To this will be added in the coming year Spanish dictation.

For girls over sixteen part time classes are maintained, which stress primarily penmanship, spelling, arithmetic, and good usage in English.

The pursuance of this program has developed the need of one or more years of high school work. A majority of girls doing eighth grade work are very young. The concentration and enthusiasm that have marked the completion of this work invariably inspires the girl with the ambition for a high school education, and in many cases this is desirable. In order to accomplish this, the school is confronted with the problem of the home life of the girl during her attendance upon high school.

To return a girl to her own home, or previous environment, usually means failure. To place her in a home where she must work for her board and room is, in the case of the older girl, an aid in developing determination and responsibility, but with the younger girl involves a responsibility which often proves too heavy for her young shoulders, and her enthusiasm for high school soon wanes.

One year of high school work in the California School for Girls would give the decided advantage of one more year of training in stability with no loss of time from formal school work, and would shorten the period of service that must be given in order to complete the high school course.

Religious Training.

The religious instruction is dominated by the same spirit of opportunity, rather than requirement, that is characteristic of all training at the California School for Girls.

A brief daily chapel exercise in each cottage maintains a spirit of reverence and respect, with no infringement upon any religious belief that may be represented in the cottage.

At 9 a. m. each Sunday mass for the Catholic girls is celebrated by a priest from Ventura Mission. At 2.30 the sisters from the Mission school conduct Sunday school, which consists of instruction in Catholic doctrine and catechism. Confessions are heard at the school on the Fourth Saturday of every month preceding communion on the Fourth Sunday. Every Catholic girl is required to attend the services of her church.

Protestant Sunday school at 10:30 is a voluntary service for any girl who desires to attend. The purpose of this session is to give instruction in Bible content, memory work, and the study of the hymns and other sacred music.

The enrollment of this service, which includes practically every Protestant girl in the school, is evidence of the interest and appreciation for this opportunity for religious instruction.

On Sunday afternoon a chapel service is conducted in the auditorium, which every Protestant girl is required to attend.

Much appreciation is due the ministers of Ventura County for this voluntary contribution, and for their unfailing cooperation in any service that may pertain to the interest and welfare of the school.

Domestic Science and Home Training.

Training in every branch of home making is taught in each cottage under as nearly ideal home surroundings as may be obtained in an institution. As stated previously, the primary organization of this institution is that of a school destined to emphasize training for the highest type of citizenship in its various phases. In order that the greatest possible time may be given such training every means has been used for reducing all labor which does not lend itself to such training. Kitchen floors have been covered with battleship linoleum, coal ranges replaced by modern gas ranges, electric washing machines and mangles installed in laundries so that the work is accomplished with a minimum of labor, and the training given in every case is that required in a modern home of moderate means.

Cookery includes the planning and serving of meals for the family group in the individual cottages. This work, of course, is intensely practical and covers every phase of preparation and care of food and provides experience in canning and preserving fruit. This work is directed by a matron in each cottage. In addition to this practical work there is great need for a dietitian who would have general supervision of all kitchens, and insure uniformly efficient training in each cottage, together with assistance in planning well-balanced menus according to scientific and practical principles. In addition to this general supervision, such a dietitian would be able to conduct weekly classes in the theory of domestic science to supplement the practical

cookery, adding scientific foundation and dignity of purpose to practical experience.

Other phases of home making, such as care of living rooms, care of bedrooms, and home laundry work, are ably directed by the house mother in the upkeep of the cottage home. Not only is careful attention given to every detail of such work, but a certain spirit of cooperation, loyalty and pride is maintained in being able to so direct the work of the home that it will in no manner interfere with the opportunities for school work and vocational training.

Household Arts.

This department includes weaving, basketry, elementary sewing, dressmaking and a minimum of millinery.

The department of weaving has developed materially during the biennium. There has been a decided improvement in both the quality and quantity of work produced. Many orders for outside work have been filled, and a reputation for excellent work has been established. While the weaving of rugs has predominated, satisfactory progress has been made also in textile weaving, and plans are being made for increasing this fascinating occupation.

In view of the fact that this work, together with basketry and lace making, are used largely as occupational therapy and as supplementary to part-time classes, the output of work has been very satisfactory.

Classes in elementary sewing cover the making of underwear, aprons, middy suits, and all household linens. Mending, darning, simple crocheted edges, and models in stitches, seams, plackets, hems, etc., are required. The accomplishment of this course involves the making of all clothing worn in the institution as well as household linens. A minimum of twelve weeks, of fifteen hours per week, in the course is required of every girl, and over and over it has been demonstrated that such a requirement is wise, regardless of the fact that apparently many girls have no natural ability or desire for such work. Careful teaching and constant repetition invariably give to each girl in the end a knowledge of fundamental principles that inculcate interest, appreciation, and to a certain extent ability in the choice of material, and the making and care of clothing.

Upon the completion of the required course a girl may, if she so desires, enter the class in dressmaking.

This class involves the making of all dresses provided parole girls upon leaving the school, serge street dresses for parole, plaited skirts worn in the honor cottage, and a certain amount of dressmaking involving the use of various materials in cotton, silk, and wool, the simple forms of tailoring, a practical study of textiles with reference to utility and price, the use of commercial patterns, and such problems in applied design and costume design as may be used to supplement class work.

Self expression and decision are encouraged to the greatest extent. Whenever it is possible to do so each girl makes her own outfit of parole clothes. In every case, when time will permit, the girl who is leaving the school may choose material and designs for her own dresses.

Creditable exhibits of work in both domestic science and household arts have been made in county fairs and the State Conference of Social Agencies.

Physical Education and Recreation.

Classes in physical education assemble daily during the school week. Every girl, unless excused by the resident physician, is enrolled in these classes. This course includes military and fancy marching, folk dancing, free arm exercises, Swedish gymnastics, Indian clubs, dumbbells, and wands.

Apparatus work, such as stall bars, flying rings, ropes, poles and swings give variety to work in the gymnasium. Volley ball and other indoor games are also included.

In connection with this course, under the direction of the director of physical education, the girls are taught tennis, basketball, and baseball. Three tennis courts, a baseball field, and croquet sets provide an abundance of wholesome outdoor recreation, in addition to regular class work. A spirit of friendly rivalry is occasioned by frequent matched games between cottages, while no other factor in the school contributes more to the spirit of sportsmanship, fair play, and cooperation.

The indoor recreation is wholly a matter of individual choice. After the supper hour, which is at 5.30 p. m., aside from a forty-five minute study period, which is required for school preparation, a girl may read or busy her fingers with her own fancy work, entirely alone, or she may join a group in singing, games, or friendly conversation.

An abundance of wholesome reading matter is provided by the Ventura County Library. This is supplemented by subscriptions by the school of standard magazines for each cottage. A piano and Victrola in each cottage provide music for all. These recreation periods are characterized by relaxation and a spirit of freedom that represents as nearly as possible a normal family group.

The weekly "movie," of course, is the chief event in the recreational program.

The yearly camping trips, visits to the county fair, picnics to the beach, which are the special privileges of the honor cottage, have become established features of the honor group.

Practical Agriculture.

This important work supplements the part-time classes in school and a minimum of 12 weeks is required of every girl at some time during her stay at the institution, unless excused by the resident physician. Especial attention is given to the raising of vegetables in a practical way.

The school enjoys an abundance of fresh vegetables as the result of this training, while the wholesome outdoor work is a valuable asset in health and development of rugged endurance.

The raising of flowers, the care of lawn and grounds in the immediate vicinity of the administration building, is done by the girls from the hospital building, for whom the resident physician recommends out-of-door work in a lighter form.

DISCIPLINE.

It may be said at the outset that the problem of discipline has been reduced to a minimum. A well-balanced program of study, work, and play, a happy normal home life, sympathetic encouragement in self expression in both work and play, furnish a normal outlet for energy

of youth which has previously been wasted or repressed as the case may be.

Everywhere a happy atmosphere of contentment and industry prevails, which is noticed by even the casual visitor at the school. A full understanding of definite requirements, a sense of cooperative obligation in the routine work of the school, together with the established precedent of fair play and just consideration, eliminates unrest and dissatisfaction. Understanding and sympathetic teachers and house mothers establish confidence and supply, to a great extent, the natural craving for motherly counsel that has been withheld entirely or injudiciously administered in the former environment.

Under such a regime discipline as administered in this institution more nearly approaches that of a well-ordered home and does not approximate the corrective measures necessary in an ordinary school room of our public schools.

Social responsibility is developed by the community life, but in every case the individuality of the girl is respected and the utmost of self expression encouraged. In other words, as a member of a social unit the girl must accept the responsibility of group life, and as an individual is encouraged to express and develop such special talents as will tend to make her a useful and happy citizen.

PSYCHOLOGICAL RESEARCH.

For the first year of this biennium psychological work was carried on as during the previous two years by the California Bureau of Juvenile Research. A visiting psychologist made a careful examination of each entering girl, followed by a searching interview checked up and supplemented by medical record, probation and school reports, and the observations of those who had been recently caring for her. This information, embodied in a brief report, was submitted to the superintendent with recommendation for the girl's immediate placement in the school, and the general plan to be followed that seemed likely to most nearly meet her special needs.

A report of the three and a half years' work of the Bureau in this school was published in the May-July, 1923, issue of the *Journal of Delinquency* under the title "A Survey of 341 Delinquent Girls in California," by Julia Mathews. A brief summary of some of the outstanding facts revealed by this study may be of interest here.

Race and Age at Commitment.

| <i>Age at commitment</i> | <i>White</i> | <i>Colored</i> | <i>Mex.-Ind.</i> | <i>Total</i> |
|--------------------------|--------------|----------------|------------------|--------------|
| Twelve | 2 | -- | -- | 3 |
| Thirteen | 13 | 1 | -- | 14 |
| Fourteen | 30 | 1 | 2 | 33 |
| Fifteen | 62 | 5 | 3 | 70 |
| Sixteen | 83 | 3 | 5 | 91 |
| Seventeen | 54 | 5 | -- | 59 |
| Eighteen | 42 | 3 | 1 | 46 |
| Nineteen | 18 | 1 | -- | 19 |
| Twenty | 6 | -- | -- | 6 |
| Totals | 311 | 19 | 11 | 341 |
| Median | 16.6 | 16.7 | 16.2 | 16.6 |

The youngest entrant was aged 12 years 7 months, the oldest 20 years 10 months, with the median at 16.6.

Nativity.

Of these 341 girls, 95 per cent were born in the United States, 45 per cent in California. The 5 per cent of foreign born represent ten different countries. Sixty-four per cent of the whole group have parents who were both born in the United States, 15 per cent have foreign parents, 9 per cent one parent native and one foreign, while for 12 per cent the parentage is unknown.

Physical Condition.

In height and weight the girls of this group are slightly superior to girls of the same ages in two representative California public school systems (Bakersfield and Santa Ana) and markedly superior to Smedley's age norms. The average age for maturity seems to be slightly earlier than for similar groups in other parts of the country.

Offenses.

Among girl delinquents sex offenses predominate. Many offenses listed for boys do not occur at all among the girls. Only one case of assault is found in our group. Truancy, vagrancy, and drunkenness accompany other misdemeanors, but have in no case been considered the main cause for commitment. Sex offenses appear in 63 per cent of commitments, while offenses against property rights include only 6 per cent. "Incorrigibility," which may or may not include sex offense, accounts for about one-fourth of the cases. The remaining 6 per cent enter as dependents.

Intelligence.

(a) Social grouping and intelligence:

| | <i>I. Q. range</i> | <i>No.</i> | <i>Per cent</i> |
|---------------------|--------------------|------------|-----------------|
| Feeble-minded ----- | .51- .79 | 99 | 29 |
| Borderline ----- | .67- .81 | 96 | 28 |
| Dull normal ----- | .81- .92 | 76 | 22 |
| Average ----- | .89-1.08 | 64 | 19 |
| Superior ----- | 1.10-1.18 | 6 | 2 |
| | <hr/> | <hr/> | <hr/> |
| | .51-1.18 | 341 | 100 |

(b) Intelligence and age at commitment. It is interesting to note that the median I. Q. is practically the same at each age level. There seems to be little relationship between age at commitment and I. Q.

(c) Intelligence and race. In this school, as in the boys' schools of the state, the white race leads by several points in median I. Q. For white girls the median I. Q. is .81, for colored girls .72, and for Mexican-Indians .68.

(d) Intelligence and offenses. Immorality and incorrigibility cover practically the whole range in I. Q. with the median for incorrigibles at .82 as compared with .79 for immorality. Throwing into one group the offense against property, we find a median of .82, the same as for incorrigibles, but three points higher than for sex offenders. Dependents are evenly distributed as regards intelligence.

(e) Intelligence and schooling. Only 9 per cent of the girls are at or above age in school at time of entrance. Four girls, or 1.2 per cent, are one year advanced. One girl is two years accelerated. Fifty-three per cent, or more than half, are three years or more retarded. If mental age is considered, however, the situation is reversed, 84 per cent being in a grade two or more years beyond these percental ages, 2.4 per cent over-accelerated as much as five years.

(f) Intelligence and occupations. Girls who have worked only at domestic service show a lower I. Q. than do those who have worked in stores and offices. Median I. Q.'s range from .71 for cannery workers to .92 for "professions"; the stage, movies, musicians, etc.

Temperament.

These 341 girls were rated on a five-point scale descriptive of temperament or prevailing mood ranging from phlegmatic to excitable. Four per cent fall in the phlegmatic group, 9 per cent called calm, 18 per cent moderate, 52 per cent active, and 17 per cent excitable. The excitable group show a much higher median I. Q. (.84) than do the phlegmatic (.68). Findings here would seem to point to the possibility that super-exuberant energy, combined with a somewhat backward mental development and often poor home conditions, furnish a good basis for delinquency.

Other Mental Conditions.

Seventeen girls were found to be unmistakably psychopathic. Four of them have been at one time or another in state hospitals. Only two, however, have been legally committed as insane. One or two others, being also feeble-minded, have found care at Sonoma State Home. Besides the seventeen who were considered definitely psychopathic, there were a large number of lesser deviates whom for want of a better term we might call emotionally unstable. Perhaps one-third of our total group might classify as such.

Home Conditions.

Sixteen per cent of these girls have lived for from one to ten years in institutions. More than half of them come from homes that have been broken by death or divorce. Twelve girls have two sets of parents. For fourteen girls nothing is known of their parents. In many cases the girls' parents are a liability, rather than an asset. Four fathers are serving penitentiary sentences for statutory offenses against their daughters. Several others should be. In contrast to these homes, however, are many good ones and a few that are apparently excellent.

After-Success.

Of the 183 girls of this group who have been for a longer or shorter time on parole, 108 were reported as doing well. Of these, 54 per cent are feeble-minded or borderline, the rest dull or average normal. Of the 39 doing only fairly well or poorly, 60 per cent are feeble-minded or borderline. Of the 87 who seem to have failed, 62 per cent or borderline or lower.

Summary.

Physically the girls of this group are, if anything, superior to average girls of the same age. Intellectually they rank considerably lower than California school children in general, the median I. Q. for the group being .81 as compared with that of approximately 1.00 for the Lerman's 905 unselected public school children. Temperamentally they are more unstable, harder to interest, more easily swayed by the impulse of the moment, and less regardful of consequences.

Conclusions.

The motives and desires that result in delinquency do not seem essentially different from those of the nondelinquent. Most of the children who come to the courts have long been recognized as difficult and much of their trouble could probably have been prevented had their special needs been sooner understood and more adequately met. As immediate steps toward prevention, the following suggestions are offered:

(1) Continuance of the present effort to find and perfect instruments that will measure and predict emotional equipment and possibilities as well as we now measure intelligence.

(2) Further study and attention to the needs of the dull, but not feeble-minded, child in school.

(3) Further studies along the line of possibilities in industry for the feeble-minded person who does not necessarily need the care of an institution.

(4) Provisions for an earlier study and understanding of children who deviate in any way, especially for the emotionally unstable child.

(5) Special segregation of the nonamalgamable psychopaths.

(6) Provision for permanent parole or supervision, perhaps from a parent institution, for many able-bodied, feeble-minded, and psychopathic individuals who could be wholly self-supporting if they had guidance and protection.

The above summary, developed from a very intensive study of 341 girls whose conduct has been of such nature as to cause their commitment to the California School for Girls by a court of the state, should be of especial interest to all students of juvenile delinquency.

The superintendent is very grateful to have the report, as it answers adequately many questions which are continually being asked the school by students, teachers, societies, and individuals interested in this great problem.

MOVEMENT OF POPULATION FOR YEAR ENDING JUNE 30, 1923.**Statement of Actual Population in Institution.**

| | |
|--|-----|
| In institution at midnight June 30, 1922 | 160 |
| Received during year July 1, 1922, to June 30, 1923: | |
| By new commitments | 75 |
| *By return from parole | 18 |
| By return from furlough | 5 |
| By return from escape | 7 |
| Total received | 105 |
| In institution during year | 265 |
| Passed out during year: | |
| By discharge | 12 |

PAROLE.

The parole work represents a field for actual demonstration of the success of the training in the school. This success is not only exemplified by the stability and industry of the girl on parole, but also by her appreciation of the justice and fair play of the school in directing her conduct.

This increased confidence in the school and the principles for which it stands, and improvement in the general conduct of the girls are the greatest achievements in this department during the biennium.

Many factors enter into the building up of the improved attitude of the girls toward the school.

The just consideration which the girls have received in the school is carried into the parole supervision. In any case of individual misconduct on the part of a parole girl a careful analysis of underlying motive is made before any judgment is rendered. In every case such adjustment takes into consideration the ultimate development of moral stability, and the girl is not returned to the school unless her misconduct is such that further liberty would hinder rather than help her progress.

Several girls have returned to the school voluntarily; others who have been absent from their employment without permission for a time, have gone to the parole supervisor's office and presented their cases for adjustment. Sometimes they are accompanied by a prospective bridegroom or a young husband. In each case adjustment is made for the best interest of the girl and her future, after due consideration of all facts. Needless to say, the parole supervisor must be a most resourceful person to meet and handle emergencies tactfully and sensibly.

In the near future it is our hope to have a full-time officer in the north, instead of half-time as at present. There seems to be an earlier adjustment of the entering girls to the school routine than formerly, which fact will have a tendency to shorten the average length of stay in the school.

During the biennium

| | |
|---|----------|
| 49 per cent remained between 1 and 2 years; | |
| 42 per cent remained between 2 and 3 years; | |
| 9 per cent remained over | 3 years. |

These figures can be reduced during the present biennium if ade-

quate help is given to place the girl outside and maintain the supervision necessary.

CONCLUSION.

This biennium has been characterized by a gratifying smoothness in the operating machinery of the institution.

The spirit of equity that has prevailed throughout the student body applies to the staff as well and all relationships have been uniformly harmonious.

Girls of legal school age have been placed in school in accordance with the law as applied to public schools. Additional provision has been made for girls not included in such law.

Attention to health and development of character have in every case had precedence over all other interests and have constituted the chief objective in all educational training.

The necessity of serious disciplinary measures has been absent entirely. In many cases girls on escape from parole have voluntarily returned to the parole officer and with perfect confidence presented the case for adjustment. On three occasions girls on escape from the school have voluntarily returned within 24 hours of departure.

There has been a marked increase in appreciation for the liberal provision made by the state for wholesome food, comfortable homes, and an excellent quality of material for clothing.

Slowly, but effectively, the feeling of hostility and rebellion at being deprived of what they are pleased to term "freedom" is being replaced by a sense of gratitude and appreciation for the protection and opportunities offered by the state. This must of necessity result in a higher type of citizenship.

Intensive training when accompanied by a spirit of good faith and cooperation enables a girl to prepare herself in a minimum of time for a reinstatement in society under the supervision of the parole department. So effectual has been the response to this opportunity that the average time spent in the school has been materially lessened, while the number on parole has increased to a point where the present provision is no longer adequate to meet the demand.

A full-time officer in the north, as well as the south, is necessary to enlarge the field of placements, and provide adequate supervision.

In view of these results the administration feels justified in the continuation and enlargement of the education policy, which ostensibly offers the best approach to the solution of problems of juvenile delinquency.

This school looks forward to offering adequate protection and educational facilities, together with pre-vocational training, to the great number of youthful offenders who must be safely guided through the period of adolescence if stability of character is to be attained.

To this end all efforts must bend toward raising the status of the school from that of custodial care to one of protective opportunity.

Respectfully submitted.

OLIVE P. WALTON, M.D.,
Superintendent.

REPORT OF SUPERINTENDENT, INDUSTRIAL HOME FOR THE ADULT BLIND.

OAKLAND, CALIFORNIA.

MR. W. D. WAGNER,

*Director of Institutions,
Sacramento, California.*

DEAR SIR: I have the honor to submit herewith the report of the Industrial Home for the Adult Blind for the biennial period ending June 30, 1924.

On the average attendance of 126 inmates the per capita cost was \$406.85 a year, \$179.84 of this chargeable for salaries and \$227.01 for support and maintenance.

The output of the industrial departments was as follows:

| | |
|-----------------------------|---------|
| Brooms ----- | 187,807 |
| Toy brooms and whisks ----- | 50,030 |
| Baskets ----- | 4,008 |
| Chairs recaned ----- | 3,783 |
| Woven rugs, (yards) ----- | 2061½ |
| Mattresses repaired ----- | 221 |

The total sales amounted to \$122,723.42, an increase of \$10,016.72 over the previous biennial period.

The assets of the shop fund, which on June 30, 1922, were \$33,099.88, would at the end of the period under review be \$47,631.85 had not the money in this fund and that received from the sale of products been, by legislative action, transferred to the general fund.

To offset the loss of this fund \$50,000 a year was allowed in the budget for "factories." Formerly no appropriation was made, or needed, for the Industrial Department as it was not only self-supporting but slowly increasing its assets.

I believe it would be conducive to successful operation of the industries to have a bill passed to return to the shop fund—known as the "Adult Blind Fund"—the money contributed therefrom to "Salaries" and "Support" less the sums expended from the appropriation for "Support Factory." If this were done no appropriation for the shops would be necessary and we would not, as at present, be restricted to doing a business within the limits of the appropriation.

I believe that no other institution or state activity is running a commercial enterprise. Receipts of other departments or institutions are, for the most part, in the nature of fees or returns to the state of money expended by the state for the maintenance of patients. The latter are designated contingent receipts, but money received in the course of business should not be placed in the same category or classification.

However, should appropriation be made for the industrial department, I would urge a considerable increase in the amount to enable us to expand our activities. As you are aware, we were desirous of adding other industries during the past year but were unable to do so as the appropriation made for the shops was not sufficient to carry on the work on hand.

Provision should also be made for putting teachers in the field to instruct the blind in their own homes in occupational and industrial work. Several years ago the organic act establishing the Home was amended to empower the board of directors to undertake this work but lack of funds prevented action. Establishment of this department will do much to bring the Home in close touch with the blind of the state and enable us to render encouragement and aid where it is sorely needed. It has been the experience in states where "home teachers" are employed that many blind, who without instruction would become dependent on state or other support, are enabled by instruction to contribute to their own support. On account of this productiveness and the contentment produced by occupation, they are less likely to be forced by their families into public institutions.

The erection of the shop building, employees' cottage and the recreation building in which is installed a central heating plant, have brought the institution to such a state of material completion that our request to the legislature for special appropriations will be confined to the small amount necessary for laying out roads and sidewalks around the new units just mentioned. Estimates as to the cost of these improvements are being prepared by the Department of Public Works.

We are indebted to the Optimist Club of Oakland for the gift of a fine radio outfit which is a continual source of pleasure to our people. Expressions of appreciation are also due to the very many friends of the blind who have given entertainments and conducted reading classes during the past years.

I also wish to thank the members of the Department of Institutions and executive offices for their unfailing courtesy, consideration and assistance in the management of the institution.

Respectfully submitted.

DOUGLAS KEITH,
Superintendent.

REPORT OF SUPERINTENDENT, PRESTON SCHOOL OF INDUSTRY.

WATERMAN, CALIFORNIA.

MR. W. D. WAGNER,

*Director State Department of Institutions,
Sacramento, California.*

SIR: The following is a brief report for the Preston School of Industry covering the sixteenth biennium, ending June 30, 1924. The report reviews the population movement, the class and trade activities, the parole program, farming, the building and construction program and calls attention to the needs of the institution. Statistical tables set forth facts concerning the population movements, causes for commitments, and other interesting and important data regarding the inmates of the school.

POPULATION MOVEMENT.

At the close of the biennial period ending June 30, 1924, the Preston School of Industry had a population of 550 boys at the institution, with 398 on parole. During the seventy-sixth fiscal year, ending June 30th, Preston received 671 boys. This rapid turnover required by the school, if it were to continue to take new boys regularly from the courts, was accomplished by returning 160 boys home to their parents or guardians in other states and foreign countries. The courts, in order to help relieve the congestion at the school, released more boys than usual before the expiration of the time necessary for them to earn parole.

There will not likely be any decrease in the number of commitments. On the contrary, with the growth of the state's population, the number is likely to increase. Greater freedom of movement by automobile and rail has brought an ever-increasing number of boys between sixteen and twenty-five to the state from all parts of the United States. These boys, frequently, get into trouble, and constitute between 25 and 30 per cent of the commitments to the school.

The Army and Navy post in California, also, contributes to the number of delinquents received by the school annually. (See table No. 13.)

The large population has been cared for with difficulty. The school does not have sufficient quarters, which necessitates releases when it would be better to keep boys. The shoemaking and clothing departments have been unable to properly meet the demands for clothing; the hospital facilities have frequently been crowded. There has, also, been a shortage of dairy and poultry products from our farm department. A rapid expansion of the various departments is necessary to care for the constantly increasing population.

EDUCATIONAL ACTIVITIES.

The purpose of classroom instruction at Preston is twofold. In the first place most of the boys must be trained to follow some vocation in order to be self-supporting when they are released from the school. For these boys, the teachers endeavor to correlate the classroom sub-

jects with the trade work. To make this instruction effective each teacher must adopt the individual method of instruction and "tie up" the reading, the writing and the arithmetic with the practical needs of the boy. This method is ineffective with more than twenty in a class. An individual card index system is used where the name, age, residence, previous schooling and trade is tabulated. An individual program is then worked out for each boy.

In the second place there are occasional high school students who will continue their education after leaving Preston. It is the policy of the school department to employ certificated high school teachers. The subjects taught are mathematics, English, history and civics. State textbooks are used and credit given, which can be applied toward a high school diploma. Spelling, reading, writing, English and arithmetic are taught in the grammar grades.

Upon entering school all the boys are assigned to the receiving schoolroom where they are segregated according to their mental qualifications and previous schoolroom attainments and then, after a careful review placed in their proper classrooms. Altogether there are fourteen classes which include grammar and high school grades, a mechanical drawing class, a commercial class and an Americanization class. Mechanical drawing is given to boys who are interested in the mechanical trades. The commercial work consists of shorthand, typing, business English and bookkeeping and is given only to students of high school standing. The Americanization class is made up principally of foreign boys who are learning to read and write the English language.

The educational department has nine employees including the educational director. The athletic director teaches a class in mechanical drawing for two hours each morning. In addition there are six full-time teachers of academic subjects.

The schoolrooms accommodate two hundred and fifty students. The average number of boys attending all classes during the past year was two hundred and thirty-seven. Of these 24.8 per cent were students of high school grade, 75.2 per cent were of grammar school grade. The average cadet had completed the sixth grade in the public schools and had spent some time in the seventh.

About 25 per cent of those entering school were practically at a standstill in school work. As soon as it was discovered that they were marking time in their studies, they were given an all-day program where they could receive trades training in accordance with their mental and physical capabilities.

An examination of five hundred and twenty-nine cases that were given the Stanford Revision of the Binet-Simon General Intelligence Examination reveals a range of intelligence quotients from thirty-three to one hundred and twenty-two, with a median of 80.4 per cent. According to psychological standards one-fourth of our population is feeble-minded, one-half is borderline or dull normal and the remaining fourth is of normal intelligence.

Because of the varied schoolroom experience and the wide range of abilities represented by the boys, it is necessary to arrange the subjects taught into larger divisions than found in the grammar schools. The term "school" is used instead of "grade."

Following is a general statement of the work covered in each division:

School "one." All new boys entering Preston are enrolled in this school for review and for observation as to their ability and status for classroom work. The instructor makes recommendation for the boy's permanent assignment in from one to four weeks after he enters the class.

School "two" gives instruction in arithmetic, English, spelling and writing for those who need a review of primary grade work. The morning section is made up mostly of foreign boys and represents an Americanization project.

School "three" gives a review of the fifth and sixth grades in the above subjects.

School "four" comprises review and advanced work for boys who have completed seventh and eighth grade work before coming to Preston. This school is organized on the departmental plan and special instruction is given in mathematics, English, history and civics.

School "five" offers work of senior high school grade and is organized in the same way as school "four."

1. Mathematics.

The average age of the boy in the mathematics classes of the upper school is about eighteen. The majority of the boys have had an eighth grade education and some few have had from one to two years in high school. The boys entering this department are assigned to one of two schools. Number "four" offers work in fundamentals as applied to concrete objects such as steel bars, lead pipes, gears, etc. Practical vocational problems applicable to conduit wiring, boiler connections, etc., are touched upon. The course is planned primarily for the boys who will not go to high school but will get some of the fundamentals that are applicable to his trade. School number "five" offers work in the elements of algebra, geometry and trigonometry. This work is correlated with the respective trades but is primarily designed for the boy who desires to continue his high school work after he leaves the institution.

The boys on the whole like mathematics and take real pleasure in working out problems, especially those that are practical. The majority feel that the study of mathematics has a real "bread and butter" value as well as a value which insures social efficiency. The individual method of teaching is used; that is boys are given work in the kind of mathematics that they most need. Business arithmetic and farm accounting are also given where boys are taking the commercial course or engaged in farming at the institution.

2. English.

The average age of the boy in schools "four" and "five" is 17.6 years and the average education is 8.4 grades.

The English of schools "four" and "five" covers business writing, simple narration and spelling. There is an effort made to interest the boys in good reading matter.

Most of the instruction is individual owing to the fact that boys are coming and going. But in English and current topics it is possible to do group work. This is much more satisfactory as it is possible to arouse more interest and enthusiasm.

3. History and Civics.

The work of history is offered to boys in schools "four" and "five" and is, as nearly as may be, a continuation of the work already done in outside schools. For this reason, individual instruction entirely is given. The course includes ancient, medieval and modern history, but the history of the United States is given the most important place.

One day each week is devoted to the study of civics. National, state, and local institutions are studied and attention is directed to all societies and agencies which have for their purpose social betterment. This course is given with a special view to instilling ideals of good citizenship and a sense of personal responsibility.

4. The Commercial Department.

In selecting boys for the commercial class, their fitness for the various office positions open to boys in the institution is kept in mind since a boy's success in one of these positions is the indication of his adaptability to clerical work after he has left the school. A good office-type boy is clean in his habits, well mannered, intelligent and somewhat attractive in person. He must have a common school education, and a year or two of high school is most desirable. He receives a thorough training in stenography and typing in the school. As soon as possible he is given office work for part of the day, and continues his work in the school-room.

The grind of the office work tests his staying ability, and his work under a competent official teaches him loyalty, gives him a practical idea of what the business world expects of him, and develops in him a sense of pride in being an essential part of the institution. The officers in charge of the boys are to be especially commended for the keen interest they have taken in helping to make them efficient.

A number of boys trained in this class are now holding responsible positions in the business world.

At present, the school is offering only a half-day in the commercial class, but it is our hope soon to add sufficient commercial work to make a full day's program.

5. Mechanical Drawing.

The mechanical drawing class is made up of boys who have had some high school training or its equivalent. As far as possible, the work is made to correlate with the trades and shop work, enabling a boy to study out his problem on paper before putting it into practice.

The character of the work is very similar to that of high school mechanical drawing, except that the instruction is individual rather than group.

The objects drawn cover a wide range and the aim is to develop the technical skill of the student and to train him to visualize and reproduce simple objects by drawing. A minimum of ten preliminary plates must be completed satisfactorily before the boy can take up any special problems, and then an attempt is made to stimulate as much interest in machine, architectural and sheet metal drawing as possible. Some boys, who have had previous training are allowed to take up more advanced branches, such as reading and making of tracings and blue prints and of designing special apparatus or machines.

6. The Grammar Grades.

A. Schools "One" and "Three."

Upon entering the Preston School of Industry, the average boy is able to do addition, subtraction, and multiplication, including problems involving those processes. He is able to write an attempt at composition which is very poor in sentence construction, and almost entirely lacking in punctuation and capitalization. The average writing is legible, but the formation of the letters is irregular and the spacing poor. The spelling is equivalent to fourth grade work. The average boy ranks higher in reading than in other subjects. He is able to read and report upon high fifth or low sixth grade reading including history, geography, and general reading.

The subjects taught in school "three" are arithmetic, oral and written, English, spelling, literature, geography, history and citizenship. Writing is taught incidentally with all written work, striving for better formation of letters, and neat, legible writing. Arithmetic is undoubtedly the most important subject, because in any trade a boy must be able to figure in order to compute his wages or carry on business of any kind. Reading and composition are also important, in order that he may know the progress the world is making, and be able to communicate with others in a business and social way.

There is close correlation between the school and the trades, particularly in mathematics. The boy is pleased when given problems pertaining to his trade. He writes a better, more interesting composition upon matters connected with his trade because it is something concrete, which he understands. The individual method of teaching is used.

B. School "Two."

In this school the average age of the boy is eighteen and he has not been beyond the fourth grade. A very few have done nothing more than add and subtract simple numbers. Spelling and simple sentences are very poor. He improves in arithmetic more than in any other subject. In most cases he learns to work the problems of simple nature. He also learns fractions. The boy remains in school about three or four months, on an average. English, reading, arithmetic and citizenship are taught. The English speaking boy in school "two" is limited in his ability to retain but by constantly reviewing the work it becomes fixed so that when he has been in the school a short time he is correcting some of his common errors such as:

"I can't see *them* examples," to "I can't see *those* examples."

"I *seen* Perez in line," to "I *saw* Perez in line."

The English-speaking boy who has not had the opportunity of schooling, or is retarded, should be given enough arithmetic so that he is able to be his own timekeeper, keep his personal accounts, add simple bills. In this way he is not entirely dependent upon others. In English he should be given enough oral work so that he is able to express himself both clearly and correctly. His written work should prepare him to write good sentences and construct friendly and business letters.

In most cases the work is individual. Since the boys enter at irregular periods it is difficult to do group work. However, group work is worth while because there is always competition.

Each boy should be taught "citizenship." He has made a mistake; that is, he has not lived according to the laws laid down by our government, so he is deprived of social privileges. Therefore, give him a chance to think over the importance of self-respect and respect to others by giving a course in "Citizenship and Government."

Generally speaking the boy's attitude toward the school is very good. At first, he is ashamed of his retardation but when he finds that the school is not criticizing him but helping him, he works with a will.

7. Americanization.

The aim in the Americanization class is to prepare the boy to take his place as a good American citizen when he leaves Preston. In order to accomplish this work he must learn to speak and understand the English language. When the foreign boy enters the school department he is usually timid and does not respond. Bringing out this response requires much time and patience. When the boy's confidence is gained he will respond. The foreign boy is a most serious and anxious worker. He feels the necessity of the English language in order to compete with others. He learns by speaking. Therefore much oral work is given. He must have an understanding of all words used. A simple but clear vocabulary is used and practical subjects are chosen that are of interest to the boy. The English language must be used in the classroom and the boy finds in order to make his wants known he must learn to express himself in English. He, therefore, learns the words or expressions much sooner through necessity and is encouraged and advanced as rapidly as he shows progress. He is greatly interested in the laws of the United States and thinks if he had known our language he would have avoided his trouble. The readers used in the work are those which give some knowledge of the United States government and ideals of its people.

Since the boy has been committed to our care it is our duty to provide him with enough English so the same mistakes will not be repeated through ignorance of the English language.

8. Music.

The band has a triple objective. It furnishes music for the military drill, teaches its members to play the various instruments and affords entertainment. The military drill is a necessary part of the education of each cadet in the Preston School of Industry. It teaches him to be orderly and concise, to obey commands. Each Sunday morning there is a dress parade at which the band is a necessity.

The teaching of the members is organized into two divisions; the second band for the beginning class and the first band for the older members. The beginning class averages a roll call of twenty-two, while the first band averages twenty-six. The boys are accepted without any knowledge of music or musical instruments. They learn, in a remarkably short time, to play well enough to enter the first band.

There are boys who have been able to enter the music profession because of their rapid progress here. The boys who are naturally talented and care enough to make rapid strides find it is a large factor in making them successful on parole. Where there is a desire to specialize in music, efforts are made to give the boys an opportunity to progress. Perhaps the most commendable part of the musical training is that it

is given in addition to a trade and schooling since the practice period for the first band is in the evening. It virtually gives each member a time and one-half program. To join the band is considered a privilege and has a steadying effect on the boys. Also each member is given units of credits for his work. A part of each Sunday morning assembly is selections by the band. Its greatest triumph is the week at the State Fair in Sacramento. The State of California invites the boys to come; offers them accommodations and amusement for an entire week. They play afternoons and evenings on the grounds and for the exhibits. There have been many trips for celebrations on patriotic occasions and picnics.

For the entertainment side there is, in addition to the band, the orchestra, composed of some of the more talented members. The orchestra often is asked to play for benefit dances and for school and church entertainments.

9. Physical Education.

Boys need physical activity. The pent up energies of youth can best be directed into expression through organized athletics. An athletic director devotes most of his time to coaching and supervising athletics. Teams compete with outside schools, including high schools, state teachers colleges, junior colleges, and the University farm school. The teams during the past year have been successful in winning a majority of the games played with outside teams.

The work of the representative teams excites interest in athletics among the boys of the various companies. Daily competition between company teams, which compete for the championship in the various sports, creates much wholesome activity. Football, needless to report, is the most popular sport. Baseball and basketball are played in season. Handball is also played by the boys at the recess periods. The swimming pool is a source of much pleasure and comfort to the boys during the summer months.

Preston has set a high standard for clean sportsmanship among the schools of this part of the state. Many boys learn valuable lessons in fair play and honesty on the Preston athletic field.

10. Military Drill.

Upon his arrival the boy is assigned to the receiving company where his first thirty days are spent in drilling and learning the rules of the school. The object is to first secure his attention in order that he may get a good start in mental, moral and physical development. During the rest of his stay, for his continued development, he is required to drill ten minutes each day. This drill is taught without arms, from the Infantry Drill Regulations in the School of the Soldier and the School of the Squad.

Attention or concentration of the mind is the quality which the average boy needs. He must memorize the "Position of the Soldier" and is very strictly required to stand in such a manner at proper times. This calls for mental alertness and gives him the appearance of dignity, neatness and confidence. He is now prepared for further work in Preston because he has learned how to pay attention to what he is told.

A battalion parade and review is held once a week. Judges are always present to name the best appearing company, which causes much competition and enthusiasm.

Every two months a competitive drill is held after which the best drilled company is awarded the honor of carrying the "Colors."

VOCATIONAL PLACEMENT.

The problem of vocational placement is important and is handled through a trades council consisting of the superintendent, assistant superintendent and detail officer.

As soon as convenient after his arrival in the institution a boy is given an entrance interview by a member of the trades council. A blank is filled out upon which is tabulated the data which determines his subsequent placement in a trade.

After he has been in the school six weeks his name comes before the trades council for consideration for a trade. At that time concrete information is at hand concerning his past school, work and conduct record. Before his name is placed upon the eligible list for a trade, the following items are considered. These are listed here in the order of their importance:

1. What is his real ambition?
2. What kind of work will he be able to follow when he leaves the Preston School?
3. What are his qualifications for the trade as judged by:
 - a Previous experience.
 - b General intelligence.
 - c Physical ability.
4. How about his general conduct record since entering Preston? Is he trustworthy?

The difficult task of stabilizing the average Preston School boy through proper school and vocational training can be more nearly realized when the following data is closely analyzed:

A study of forty unselected cases shows that the average cadet has been out of school 3.8 years and has had a work record covering 2.2 years; that is, he has been unemployed 42 per cent of the time since leaving school. The average length of time spent in a single occupation is eight or nine months. During that time he has changed jobs two or three times. Generally, these boys overrate their ability and their trade knowledge is scattered and inaccurate. Very seldom has a boy worked the major portion of his apprenticeship in any one trade before entering Preston. The instructor has more difficulty, in some cases, teaching a boy who claims to be more experienced than he really is, than one who has no knowledge of the trade. Generally speaking, boys receiving apprenticeship trades instruction advance about twice as rapidly in Preston as they do on the outside in the same length of time.

The boys are taught while "on the job," most of the projects being maintenance jobs. Most boys take a pride in doing their work right because they know it is real production work and must stand the test of actual use. It is difficult sometimes to secure work suitable to the abilities of all the boys in any one trade. The simple jobs are handled

by the new boys while the more difficult work is done by the more experienced boys.

In the past year a new laundry has been built and ample modern machinery installed. A new machine shop is nearing completion and with more room and better equipment, a larger number of boys can be accommodated in this—the most popular trade at Preston. Ample equipment in every shop means more effective training for the boys.

An average of two hundred and one boys have been receiving trades instruction daily for the past year. Of this number one hundred and twenty-five or 60 per cent were working all day. This does not include boys working in discipline companies or extra squads, where pick and shovel and wheelbarrow work is done. There is no training more valuable for boys who have not learned how to do a real day's work than this type of manual labor, especially when it is well organized and each boy is required to do his quota. After a boy has learned the value of a real day's work and has gained confidence and self-respect then he is ready to learn a trade.

Trade training is offered in the following lines of work: Dairying, poultry husbandry, general farming, horticulture, vegetable garden, landscape gardening, cabinet making and mill work, carpentering, masonry, electrical work, painting, plumbing and sheet metal work, auto repairing and machine shop practice, blacksmithing, steam fitting and oil firing, baking, butchering, cooking, printing, shoemaking and repairing, tailoring, laundry work, photography and clerical work.

There are twenty-four trade and agriculture instructors, six of whom have charge of farm departments.

THE FARM.

The farm activities have been materially increased during the last year. The thirty-five acres of bottom land purchased from John Riley, have been used for intensive gardening, producing all the fresh vegetables used by the school, besides furnishing a good supply of strawberries and an abundance of cantaloupes and enabling us to can three thousand gallons of tomatoes, or a year's supply.

The thirty acres of fruit trees and vines set out last biennium have done well and will come into bearing during this biennium. In fact the vines have produced a fair crop of grapes already this year. During the year just closed we have added approximately ten acres of Thompson seedless and muscats to our vineyard, which will produce all the table grapes and raisins needed by the school.

Our alfalfa acreage has been increased to sixty acres, about thirty acres of which have been leveled and checked during the last year and will be seeded this fall. This will materially aid us in producing sufficient hay for our entire herd. Owing to the shortage of water this season our crop of alfalfa was limited. We feel, however, that now since our water system has been repaired we will not again suffer such a shortage.

The poultry department has been put upon a paying basis and up to the end of the fiscal year produced all the eggs needed by the school at a cost of seventeen cents per dozen. Our plant, however, is not sufficient nor suitably located to produce the best results and we recommend a small appropriation to pay for moving to a better site.

The dairy herd has paid well during the last two years, producing all the milk, cream and butter used by the school. Owing to the shortage of feed on account of dry season the cost of production was higher than it would otherwise have been, but we were even then able to produce our milk at a cost of eighteen cents per gallon. We find fresh milk to be the most wholesome and satisfactory food for the boys. Our herd is too small to produce as much milk as the boys should have for the best results and we most earnestly recommend the purchase of at least six purebred Holstein cows. This we feel to be absolutely necessary to take care of the rapidly increasing population. Our dairy is under the care of an expert dairyman and special care is taken at all times to keep the tubercular cows segregated from the others. All milk is pasteurized. Our dairy house is at present inadequate, and we recommend that it be remodeled in order that it may be made more sanitary, and the work be more efficiently done.

In addition to farming our own land, we have this year farmed two hundred acres of land owned by the Philadelphia Quartz Company, fifty acres of which is heavy bottom land, and the rest upland. We drained the bottom land, and planted forty acres to barley, and ten acres to beans, which, considering the dryness of the season, produced fair crops. This land we are working on shares with the owner, paying one-third of the harvested crop. Our farm equipment is inadequate to our needs, and we recommend particularly the purchase of a Fordson, and two span of farm horses.

NEW CONSTRUCTIONS AND REPAIRS.

During the two-year period ending June 30, 1924, the following construction work was completed:

1. The Henderson dam was raised ten feet, increasing the capacity of the reservoir from 300 acre-feet to 550 acre-feet.
2. Six thousand feet of ditch on the water system was concreted, and approximately 800 feet of wooden flume was built on the upper ditch.
3. A new laundry building was erected, and new machinery installed.
4. Two cottages, costing \$5,000 each, were completed for the business manager, and the assistant superintendent.
5. A new machine shop 40' x 160' is under construction.
6. The refrigeration and ice plant was completely overhauled and enlarged.
7. The central kitchens were repaired, and new ranges installed.
8. The porches on the administration building were rebuilt.
9. The trades building has been partially remodeled and repaired.
10. Two new hog houses, with a capacity of 30 sows each, were built.
11. Many minor repair jobs were done on the buildings, amounting to approximately \$15,000.
12. Approximately \$2,600 was spent in piping the farm for irrigation.

INSTITUTIONAL NEEDS.

The growth in population creates problems from many sources, and calls for a general expansion of the classroom program, shop facilities, and maintenance and operation departments.

The most urgent needs are:

A segregation and detention unit for disciplinary, and unresponsive cases, new hospital and receiving building, school building, tailor shop, and farm cottage.

Appropriations for new buildings, equipment, and repairs amounting to approximately \$450,000 should be made at the next session of the legislature if the Preston School of Industry is to properly care for the delinquent youths of the state between the ages of fifteen and twenty-one that need institutional training and supervision.

PAROLE PROGRAM AND ITS RESULTS.

Encouragement and recognition are proving more satisfactory in the reformation of youths in the Preston School of Industry than punishment and restraint.

When a new recruit arrives he soon learns that by following the rules of the school and by good behavior he will be promoted each month and will reduce the time required to earn his right to make application for parole from twenty-four months to fourteen months. He also learns that if he can hope to receive a position or the kind of work he prefers to follow he must gain the confidence of the instructors and the members of the Trades Council. This confidence is gained by the youths who are alert, trustworthy and reliable. Promotion to better living conditions in cottages and honor companies is obtained in the same manner by those who hold themselves up to the higher standards of conduct and trustworthiness.

When a cadet has earned the required number of credits entitling him to make application for parole a definite program of conduct, employment, and finance is explained to him.

It is further explained to each cadet making application for parole that there are three different kinds of discharge papers issued by the Preston School.

Ordinary release or dishonorable discharge, issued to those who do not try to meet the requirements of the parole agreement or who get into trouble while on parole.

Honorable discharge, awarded to the average youth who conducts himself fairly well but who changes employment frequently and is not well established in an occupation.

Diploma of honor, for those who follow the parole program conscientiously, become well established in a regular occupation, and make satisfactory plans for saving and conserving their finances.

How to earn the diploma of honor (which is signed by the board of trustees of the Preston School, the superintendent, and the Governor of the state) and thus establish himself in his community as a good citizen at the age of twenty-one is explained to each cadet before he makes application for parole and every cadet signs a paper containing five paragraphs which is a statement of his program of parole and agrees to use his best efforts to measure up to each of the five requirements:

First: I will properly fill out and mail a vocational report regularly the first of each month, using the regulation "monthly vocational report blanks" furnished for that purpose.

Second: Knowing that the object for which I am released on parole is to give me the opportunity to learn a trade or become established in some good and useful

occupation that will give me a good start in life by the time I am the age of twenty-one, I hereby agree to use my best energies to make good in my employment and earn a reputation for honesty, faithfulness and industry.

Third: I agree to save money from my earnings regularly and maintain a savings account in some bank as soon as possible after my release and during the period of my parole.

Fourth: Believing that my future success and happiness depend on the way I conduct myself in society, in business and in my home, I agree to refrain from evil practices, such as late hours at night, excessive smoking of cigarettes, deception and other influences detrimental to my best interests and welfare, and will keep my general conduct record satisfactory and my habits good.

Fifth: I agree to keep out of trouble in the future, and will avoid such companionships as I have reason to believe would not be approved by the school authorities, knowing that if I associate with evil companions I will be tempted to loiter around pool and billiard halls, dance halls, cigar stores, prize fights, and other questionable resorts, and in doing these things would be inviting trouble.

A credit of twenty per cent is awarded for meeting the requirements of each of the five paragraphs in the agreement. A 100 per cent record on parole is maintained by every cadet who meets the requirements of all five of the paragraphs in the agreement. A diploma of honor is awarded to all those who maintain a 100 per cent record while on parole.

The parole officer visits the youths who are on parole in their homes for the purpose of encouraging them in every way possible and helping them meet the requirements for a 100 per cent record and qualify for the diploma of honor.

The following blank is used in making reports on the interviews and to help the parole officer check up on the record being made by the youth:

Address.....

An average of about seventy-five per cent of the youths make good and earn wages ranging from a few dollars a week up. As they become better established in their positions their salaries are increased and show up more regularly in their reports. The following conservative statement by months will give an excellent illustration of the value of liberal parole which permits the youth to go away from the Preston School of Industry, under supervision, from one to three years before their commitment expires and earn their way while establishing themselves in an occupation or learning a trade.

| | | |
|--------------------|-------------------------|-------------|
| 1922—July | Youths on parole earned | \$12,200 00 |
| August | Youths on parole earned | 12,562 50 |
| September | Youths on parole earned | 11,641 00 |
| October | Youths on parole earned | 12,480 25 |
| November | Youths on parole earned | 13,276 00 |
| December | Youths on parole earned | 13,812 20 |

| | |
|--|-----|
| July 1, 1922, there were on parole..... | 364 |
| During the two years covered by this biennial report, there were transferred from the Preston School to the parole division..... | 442 |

Total number of individuals in the parole division during the two years. 806

The following discharge papers were issued during the two-year period :

| | |
|---------------------------|---------|
| Diploma of Honor..... | 65 |
| Honorable Discharge | 230 |
| Ordinary Release | 113 408 |

Number on parole July 1, 1924..... 398

Seventeen per cent of those discharged from parole during the two-year period received the Diploma of Honor.

Seventy-four per cent received the Honorable Discharge and the Diploma of Honor.

Sixteen and one-half per cent received the Ordinary Release at the age of twenty-one (wanderers whose homes were in other states, addresses unknown and for whom no definite report can be made).

Eight per cent were returned to the Preston School for violation of parole.

One and one-half per cent were convicted of new offenses and sent to prison.

The question is frequently asked, "How do you secure employment for so many?" Our self-placement plan is the best answer to this question. When a youth is out of employment he is instructed how to secure a position for himself. A pamphlet entitled, "How to Secure Employment" is given him and the instructor or advisor accompanies him to help arrange the first two or three interviews. He is instructed to write the name and address of the firm and how to find out the name of the manager or the person with whom he should secure an interview regarding employment. In this manner sample interviews are given by the instructor until the youth learns how to arrange and conduct the interviews himself. When necessary the youth receives wages while seeking employment when he follows the self-placement program as outlined by the instructor.

This plan has a tendency to instill confidence in the youth when he learns to secure his own position and he values and appreciates the employment when secured through his own efforts. He becomes more self-reliant and is encouraged when he experiences the thrill of accomplishment and success instead of the depressing effect of failure.

Many youths on parole have been promoted to responsible positions who have learned to apply the principles contained in the following self-placement plan:

Instructions and Suggestions—How to Secure Employment.

By R. A. LANG.

First, decide what your work is to be—the kind of work you will most enjoy and for which you are best fitted. This is important, for when you are following work you like to do you will take more interest in it and obtain better results for both yourself and your employer.

Second, decide what firm, or company, or shop can give you the best opportunity for promotion and permanency. In seeking a position it is advisable to locate where you can establish yourself with a firm or company large enough to insure permanency and ample opportunity for promotion.

Third, write down on the first blank page in the back of this book the name and address of the company or shop where you have decided to apply for a position. Select the best place first, and then follow up by filling out all the blank pages in the book, or until you secure the position you want.

Fourth, inquire of someone and find out the name of the person who employs the help and write the name down. Get all the information you can about the employer and when will be the most opportune time for you to interview him. Prepare to make the interview successful. Are your hands clean? How about your finger nails? Your general appearance—clothing, shoes, standing (erect) position, walk, attitude—all have a tendency to help you gain the confidence of your prospective employer.

Go directly to the employer of the help, and address him by name. Say to him: "Is this Mr. ——? My name is ——, I desire to secure secure employment with your company. I am willing to work and follow instructions." After the interview write down what the employer said as near as you can remember.

Always bear in mind you are selling your services when interviewing an employer regarding a position for yourself. When you secure the position it is then up to you to return full value in the best service you can give. Do your work a little better than someone else would do it and always try to do a little more than is expected of you. Remember you have something to sell every day—**THE BEST SERVICE YOU CAN POSSIBLY GIVE**. Use your head as well as your hands. Study how to improve yourself and increase your abilities. The way you do your work and the progress you make is of the utmost importance. Your life, your living, your happiness and contentment, depend largely upon the way you do your work and what you earn.

In whatever position you find yourself, use it as a stepping stone to something better by performing the tasks assigned you so well that your employer will be entirely satisfied when he pays for the services you have sold him. He is your customer and the best advertisement or recommendation you can get is a satisfied customer. Your future success depends so much upon the reputation you make from day to day in the way you do your work.

Trade instruction is given the youth while in the Preston School and his release on parole depends on the upbuilding of character or good conduct and efficiency in his work or trade advancement. He is taught to realize that character is expressed in terms of work and that the better or higher grade of work earns his release more rapidly by an increase in the number of credits he receives. As soon as possible after a new recruit arrives in the Preston School the parole officer has an interview with him regarding the kind of employment he would like to follow after graduation and an investigation is made of his home and possible employment so that he will receive the right kind of instruction and trade training while in the school.

The following summary of four hundred and eight youths who were discharged from parole at the age of twenty-one during the last two years and the example of what it is possible for one youth to accomplish in each of the occupations followed while on parole, emphasizes the importance and value of character upbuilding and trade training in the Preston School:

EXAMPLES.

| | Number in occu- pation | Average wages at beginning | Average wages two years later |
|--|------------------------------|---|---|
| ARMY AND NAVY (Albert W—enlisted in the Third Corps Area of the United States Army and his superior officer wrote the Commanding Officer as follows: "This soldier since reporting at this station has been energetic, conscientious and is a model of neatness and a credit to the organization and the military service. He has been commended by the Commanding General, Third Corps Area, for excellent performance of duty. It is respectfully requested by the Commanding General of the Third Corps Area that this soldier be given consideration to a higher grade, either Sergeant or Staff Sergeant, in recognition of his activities for his regiment and for the Army.") | 14 | \$32 a month | \$32 a month |
| AUTO APPRENTICES AND HELPERS (Jack P—worked in the auto repair and machine shop while in the Preston School. A position was secured for him in a small machine shop as an apprentice at \$18 a week. He was promoted until he held a responsible position with the Pacific Oil Company at \$175 a month.) | 39 | \$15 to \$18 a week | \$21 to \$27 a week |
| BAKERY APPRENTICES AND HELPERS (Mitchell M—worked in the bakery while at the Preston School of Industry. A position was secured for him in a bakery paying \$9 a week. He followed the same trade and was promoted to the position of foreman and now receives \$36 a week.) | 11 | \$15 to \$21 a week | \$21 to \$36 a week |
| BUILDING AND CONSTRUCTION WORK (Milton D—had an unsatisfactory record while at the school, violated parole once and came back to prepare for another start. Employment was then secured for him as a carpenter's helper at \$4 a day. He has now established himself as a regular carpenter, married, and settled down in a home of his own.) | 29 | \$18 to \$24 a week | \$24 to \$36 a week |
| ELECTRICAL AND WIRING (John S—was employed in the heating plant and electrical work while at the school. After his parole he followed his trade, wiring houses and taking small contracts in electrical work. He later secured a position in a large tourist hotel as assistant to the engineer and was promoted to the position of electrical engineer, receiving \$150 a month, room and board.) | 12 | \$15 to \$21 a week | \$24 to \$42 a week |
| FARM AND ORCHARD (Thomas T—worked on the ranch while at the Preston School of Industry and studied horticulture by correspondence with the U. of C. He also took a summer course at the Davis Farm. When he was paroled he became interested, with four other young men, in a large prune orchard in the Santa Clara Valley. They now own the ranch and are paying for it from the crops.) | 59 | \$40 to \$65 a month, room and board \$2.50 to \$4 a day | \$40 to \$65 a month, room and board \$2.50 to \$4 a day |
| LABOR AND IRREGULAR WORK (Samuel S—worked as a teamster on the farm while at the Preston School. A position was secured for him as a laborer at \$4 a day when he left on parole. He followed the same line of employment until he learned concrete and at the time of his discharge was earning \$6 a day.) | 28 | \$2.50 to \$4 a day | \$2.50 to \$4 a day |
| MACHINIST APPRENTICES AND HELPERS (Ira C—had a hard time of it at the Preston School, spending most of his time in the Extra Squad at hard labor. He worked three months in the heating plant before his parole. A position was secured for him in a machine shop at \$8 a week. He remained with his position, received several promotions, and now earns \$28 a week.) | 46 | \$15 to \$18 a week | \$24 to \$35 a week |
| OFFICE AND CLERICAL WORK (Beard D—kept the records in the shoe shop and studied bookkeeping while in the school. A position was secured for him in a machine shop as helper and assistant in office work at \$21 a week. He was promoted until he held the position of production superintendent at a salary of \$100 a month. He later secured a position as assistant bookkeeper with the McCullough-Fagan Lumber Company earning \$165 a month.) | 34 | \$12 to \$21 a week | \$25 to \$30 a week |
| PLANING MILLS AND BOX FACTORIES (Harley C—worked in the Commissary and Electrical Squad while at the school. Employment could not be arranged for him in electrical work on parole but a position was secured for him in a box factory. He became an expert box maker and now earns good wages ranging from \$6 to \$9 a day with the Earl Fruit Company.) | 18 | \$15 to \$18 a week | \$21 to \$36 a week |
| PORTER AND DINING CAR SERVICE (Dominado O—worked in the House Squads and cottage kitchen while in the school. A position was secured for him as house boy in an apartment house at \$60 a month and a room. He was promoted until he received \$80 a month and then secured a position in Berkeley to work his way through the University of California.) | 23 | \$25 to \$60 a month | \$40 to \$65 a month |

EXAMPLES—Continued.

| | Number in occu- pation | Average wages at beginning | Average wages two years later |
|---|------------------------------|----------------------------------|-------------------------------------|
| PLUMBING AND SHEETMETAL WORK..... (Wesley L— worked in the sheetmetal trade while at the Preston School. A position was secured for him as an apprentice in a sheetmetal shop where he worked steadily and went to night school to study mechanical drawing for two years. At the time of his discharge from the school he was receiving \$6 a day.) | 18 | \$15 to \$18 a week | \$24 to \$33 a week |
| PRINTING..... (Ronald M— worked in the printing office while here and a position was secured with the Dettmer Printing Company at \$18 a week. He remained with the same company during the two years of his parole and was promoted to \$25 a week.) | 12 | \$15 to \$18 a week | \$21 to \$24 a week |
| RESTAURANT, HOTEL AND CAFETERIA..... (Clarence Y— (colored boy) was a cook in one of the cottages while at the school. A position was secured for him with the Southern Pacific dining car service when he was paroled. He later secured a position as second cook in a cafe and was promoted to the position of chef at \$150 a month.) | 29 | \$15 to \$21 a week | \$21 to \$24 a week |
| TRUCK DRIVING AND AUTO DELIVERY..... (Clifford S— was employed on farm and tractor while in Preston School. A position was secured for him as a swamper on a truck at \$20 a week. He later became a truck driver and secured a position driving a delivery truck for the Armour Packing Company at \$33 a week.) | 35 | \$15 to \$24 a week | \$24 to \$33 a week |

It is better to prevent the commission of crime than to punish the offender after the damage is done. Between the ages of sixteen and twenty-one the youth should be taught to assume the responsibility and to look forward in his education and trade training to the time when he will be called upon to assume the responsibilities of a man and a good citizen.

The sort of man and citizen the wayward youth becomes depends to a large extent upon the opportunities we are able to place within his reach to accomplish something worth while, or a definite program that will stimulate mental activity and arouse ambition to complete the task and prove it can be done.

Our parole program with a Diploma of Honor awarded to the youth who is successful in maintaining a 100 per cent record of accomplishment has a stimulating and beneficial effect on the cadets in the school as well as those who make application for parole. Nothing we can say emphasizes this fact more forcibly than is expressed in the sentiments of appreciation contained in letters from youths who received Diplomas of Honor.

Dear Mr. Lang:

Your letter and the Preston Diploma received. It certainly helped me and I feel now that I have partially atoned for my error. As I look back over the last three years I feel that I have learned some valuable lessons, one of which I will not soon forget.

I wish to thank you not only for the Diploma, but also for the kindness you have shown me at times when I needed it. I am glad to know that you still hold an interest in my life and future and want to assure you that this interest is mutual.

Dear Mr. Lang:

These few lines are to acknowledge receipt of your letter with my Diploma enclosed which I had hoped to earn before Thanksgiving and now am rewarded for my efforts. I wish to thank you for your kind letter and good wishes and your confidence in me, which I will surely try to live up to.

I know you will be pleased to hear that my salary has been increased since my last report to \$30.00 a week.

R. J. M.

Dear Mr. Lang:

I was one happy boy when I received the Diploma and read it, and thank you for your interest.

I also wish to thank the Governor and the Superintendent and others who signed by Diploma and I expect to do just as well from now on as I did when I had to send in my monthly reports.

Malcolm B.

Dear Mr. Lang:

Words are inadequate to express my sincere thanks to you and those concerned for sending me my Diploma. I do not look upon it as a graduation from something lower to the higher, but as one who has proven what those concerned in him thought he could do.

My ambitions do not cease just because I am free to do as I please, but will keep on striving for the things that are worth while.

Thomas T.

More and more we should realize the importance of making the State Industrial School, established for the training, education and character upbuilding of the wayward youth, an open door of opportunity for all who enter.

Intensive, scientific and sympathetic consideration must be given to this problem if we would stem the tide of the onswEEP of crime. We must learn how to inspire and develop in these youths a spirit of fairness, a willingness to work, assume responsibilities and a wholesome desire to make of themselves worthy, dependable American citizens.

O. H. CLOSE,
Superintendent.

STATISTICAL TABLES.

TABLE NO. 1.
Enrollment Statement.

| | June 30, 1922 | June 30, 1923 |
|---|------------------|------------------|
| Actually in institution..... | 447 | 496 |
| Those on parole..... | 322 | 364 |
| Those on furlough..... | 35 | 31 |
| Escapes at large..... | 47 | 53 |
| Totals..... | 851 | 944 |
| Added to rolls during year: | | |
| New commitments..... | 409 | 589 |
| Transferred from Whittier State School..... | 10 | 8 |
| Transferred from Sonoma State Home..... | | 1 |
| Totals..... | 419 | 598 |
| Total enrollment during year..... | 1,270 | 1,542 |
| Removed from rolls during year: | | |
| Discharged from institution..... | 54 | 29 |
| Discharged from parole..... | 119 | 111 |
| Order of court from furlough..... | 1 | 2 |
| Released, order of court..... | 34 | 67 |
| Discharged from furlough account prison sentence..... | | 1 |
| Expiration of term on parole..... | 44 | 54 |
| Transferred to Whittier State School..... | 2 | 8 |
| Expiration of term on escape..... | 29 | 25 |
| Discharged from furlough..... | 8 | 7 |
| Discharged from escape account prison sentence..... | 3 | 7 |
| Discharged from parole account prison sentence..... | 13 | 5 |
| Died in institution..... | | 1 |
| Transferred to Sonoma State Home..... | | 4 |
| Returned to court..... | 18 | 4 |
| Deportation..... | | 160 |
| Died on furlough..... | 1 | |
| Deported from escape..... | | 1 |
| Died while on escape..... | | 1 |
| Total passed out..... | 326 | 487 |
| Total enrollment at end of year..... | 944 | 1,055 |

REPORT OF SUPERINTENDENT OF THE WHITTIER STATE SCHOOL.

WHITTIER, CALIFORNIA.

During the biennium just closed a number of new buildings were erected and occupied at Whittier. Two attractive and well equipped cottages made possible home life for eighty more boys. The completion of the school unit by the addition of the assembly hall has been a great improvement. These new buildings have increased the efficiency of the school; tended to relieve the strain under which employees have been working and have added to the comfort and well being of many boys. The release of the gymnasium building from use for assembly purposes will enable the school to promote physical education and provide athletic contests during the long winter evenings.

The morale of the school continues high. For three years no boy has been absent without leave and unreturned. The number of those who absent themselves without permission has steadily decreased. The boys who have been longest in Whittier take a strong stand against any running away.

The placement department reports the number of boys conducting themselves in a manner that is satisfactory to the communities in which they live as over seventy per cent of the total number on placement. Boys who have been placed out from the school, or returned to their homes, after their period of training at Whittier, have been supervised as well as could be expected under the conditions that existed.

During the past two years the boys have constructed a million and a half gallon earth reservoir that will hold surplus water from the Rincon ditch that supplies very cheap water for most of the school orchards. Arrangements are practically completed for the installation of a booster pump to force this water to the upper reservoir so that it can be made use of on the entire farm.

The citrus orchards were quite seriously damaged by frost two years ago. This reduced the farm income but the cash returns for the two years over and above all fruits, nuts, vegetables and dairy products used by the school was \$25,000. Seven acres of persimmons, three acres of walnuts, two acres of apples and approximately 600 orange trees were planted during the two years, giving a total of 100 acres in orchards.

At considerable expense and inconvenience, the hoof and mouth disease was kept out of the school herd. Over 100 gallons of milk has been produced daily. All of the butter for the school is made on the premises and all of the milk is used by the school.

The school was privileged to spend part of the summer season at Catalina Island. Mr. William Wrigley, Jr., and his associates in the Wilmington Transportation Company provided free transportation and camp site. Mrs. Wrigley in many ways evidenced her personal interest and added greatly to the pleasure of the boys during the camping season. Mr. John Patrick, president of the company, Mr. David Fleming, secretary, and Mr. D. M. Renton, manager of Catalina Island, extended numerous courtesies to the school.

The state school now has one of the leading juvenile bands in the west. The various service clubs, women's clubs and all the civic organizations in the city of Whittier joined in a benefit to raise money for the purchase of band instruments.

That the Whittier State School boy is a problem in education is now rather generally conceded. Local authorities who have tried to deal with him appear to better understand and more fully appreciate than heretofore the value to the community of the state's effort at Whittier to render an effective service in the care and training of this boy. There has been a sincere and general spirit of cooperation between the school and the community representatives.

The experience of the past two years strengthens the conviction that it is essential to deal with each of these boys separately and as a special, individual problem.

Findings of the Research Bureau and of the psychologists, who have made mental tests of all boys coming to Whittier, indicate that whereas a few years ago practically one-third of the boys in the state school were definitely feeble-minded, today conditions at Whittier almost approximate those in the public school. Seventy-five per cent of Whittier boys now are classified in the low-normal, normal, or superior intelligence groups and very few of the remainder fall below borderline classification.

A comparison between conditions as they existed twelve years ago and July, 1924, is indicated by the following, showing the intelligence grouping of all boys in Whittier in 1912 and 1924:

| <i>Year</i> | <i>Superior</i> | <i>Normal</i> | <i>Borderline</i> | <i>Feeble-minded</i> |
|-------------|-----------------|---------------|-------------------|----------------------|
| 1912 ----- | 2% | 38% | 25% | 35% |
| 1924 ----- | 5% | 75% | 15% | 5% |

Whittier was never intended to be a home for the feeble-minded. These unfortunate boys can be better cared for and at less expense to the state elsewhere, and their presence at Whittier interfered seriously with the progress and response of boys mentally capable of profiting by the academic instruction and trades training there provided.

The hearty cooperation of judges, probation officers and social workers in establishing the foregoing as a policy, contributed greatly toward bringing about the improved conditions mentioned above. Some boys were transferred to the Sonoma State Home for the Feeble-Minded.

The modification of the Juvenile Court Act and the revision of the Whittier Act, relating to acceptance of boys, as granted by the legislature at the request of Whittier, has been made use of in a number of cases. These changes make it possible for a boy who is a ward of the court to go to Whittier on probation without court commitment and for problem boys in the public schools to be received at Whittier without their becoming court wards at all. Increasing numbers of requests are constantly being received from probation officers, school principals, social welfare organizations and parents for the acceptance of such special cases. There is every indication of an increased recognition of the need for "twenty-four-hour schools" maintained by cities and counties for the problem boys of the various communities.

Whittier has a veteran Boy Scout troop and is credited with being the first state school to adopt scouting and enroll a troop in the International organization. Four members of the Whittier troop expect

to qualify as Eagle Scouts before they leave the school. All these boys began as tenderfeet at Whittier.

Much of the work of the Research Bureau was for a time held in abeyance, but Dr. Grace M. Fernald and Dr. Ellen B. Sullivan of the Department of Psychology of the University of California at Los Angeles very generously gave their services without expense to the state, and under their direction not only has the routine mental testing of all boys been continued, but some special research studies of national interest have been conducted.

Dr. Lewis M. Terman of Stanford University, with his usual thoughtfulness for Whittier State School, authorized Dr. Maud Merrill, assistant professor in his department, to edit the *Journal of Delinquency*, one issue appearing as the "Stanford Number."

Dr. Thomas J. Orbison, neuro-psychiatrist of Los Angeles; Dr. C. Edgerton Carter, Pasadena physician; Dr. E. V. Emery of the staff of Norwalk State Hospital, have made examinations of special cases and rendered valuable service free of charge. A number of boys who received Dr. Carter's thyro-logen treatment showed marked improvement in physical condition and mental alertness.

The general health conditions supervised by Dr. Herbert E. Tebbets, continue to be excellent.

Governor Richardson personally authorized the Department of Finance and the Department of Institutions to draw on the general emergency fund for the use of Whittier during the second year of the biennium. This action by Governor Richardson meant the addition to the staff of a woman to act as mother to a group of small boys; a teacher for the Department of Education; a director of physical education and athletics; some much needed assistance in the after-care of boys trying to reestablish themselves following their period of training at Whittier, and restoration of better working conditions throughout the school. It also made it possible to secure the services of Dr. Catharine Cox of Stanford University as director of the consolidated departments of Research and Education. Dr. Cox will also take over the editorship of the *Journal of Delinquency*, which will continue to be published by the Whittier School press.

During the past two years there has been a steady increase in the number of requests from juvenile courts to have boys received at Whittier. The school is always over-full. Commitments exceed the possibility of acceptance. There is also a decided increase in the number of requests for acceptance without court commitment or court action. These come from juvenile court authorities, leading social and educational agencies, and from individuals prominent in social service. The biennial period ends with the school filled to capacity and boys under commitment waiting their turn for admission.

Practical recognition of the value of preventive work is much more evident than formerly, as is also a larger sense of responsibility on the part of society for the right of the boy to his fair chance in life. Society feels less inclined to make him carry all the burden for unhappy developments resulting from his having been neglected or to causes beyond his control.

Unfortunate home conditions still seem to be an outstanding cause of juvenile delinquency. Many problem boys apparently come from homes where there is parental incapacity rather than indifference; boys whose

parents have made a sincere effort to properly care for and train them, but who lack the necessary ability. In other instances special educational needs have not been provided for them in public school. Certain exceptional boys can not respond to any ordinary procedure however well suited it may be to the need of the average boy. Truancy and delinquency not infrequently follow a requirement to do the impossible in school.

In many cases the boy's difficulty has been inability to learn by ordinary methods because of some actual mental peculiarity. Such a boy is sent to Whittier after he has already become a school failure. In most of these cases it is possible to bring the boy up to his grade in a fairly short period by the use of special methods.

Of the last seventy-eight cases tested thirty-one, or thirty-nine per cent, were retarded four or more years in one or more school subjects. In one case a boy of eleven with normal mentality who was unable to read his own name or to write the simplest words correctly, in spite of steady public school attendance, is being taught by methods as devised by Dr. Grace M. Fernald, to apply to nonreaders. In less than four months he is able to read in the third reader and to write as well as the average fourth grade child. At his present rate of learning he should be able to go into the fifth or sixth grade by the end of this year. The case is the more interesting as he is being taught by one of the older Whittier boys to whom the method of instruction has been explained. This case is extreme but typical of a group that is primarily an educational problem.

The first task of Whittier is to discover the particular needs and peculiarities of the boy and find the methods which will bring him back to normal educational and social adjustments. But recognition of the presence of unusual mental conditions and other exceptional characteristics in problem boys has not lessened the insistence at Whittier that boys who come to the state school shall conform to certain accepted and possible standards of conduct and guard the rights of others to "life, liberty and the pursuit of happiness." Whittier has insisted on a revival of interest in prompt obedience to properly constituted authority, respect for law and reverence for things sacred.

Most boys reach Whittier without a normal interest in any definite career. The school teaches a dozen different trades. Not infrequently trades instruction opens up a new world to an indifferent boy. He becomes interested and ambitious; acquires habits of industry; and thinks in terms of future accomplishment in "my trade." Scores of boys have gone out as apprentice painters, carpenters, printers, bakers, etc., into employment at more than a living wage. Necessary expenses could be met from the income they earned and boys who pilfered to satisfy their wants have been transformed into wage earners, helping to support their parents or younger children in the family. Not a few boys have remained at Whittier of their own accord from three months to a year beyond the usual time so as to better fit themselves to follow the trade they have been learning in the school.

While the state has evidently striven to keep pace with the marked increase in the population by adding to the number and capacity of hospitals for the insane and homes for the feeble-minded, there has been no addition to the number of institutions for the care of boys in

over thirty years; nor has the capacity of those created at that time been added to in any material way. Additional provision is urgently needed now, but it is the conviction of the administration at Whittier, however, that the problem of juvenile delinquency will not be solved by merely adding to the number of state-maintained schools for court cases. On the contrary, it is believed that communities will have to deal with delinquency nearer its source by establishing twenty-four-hour schools under educational supervision and direction, locally supported.

The necessity for securing men and women of exceptional ability and special training for the work at Whittier State School was never more apparent than now. Dr. Bernard Glueck, director, Bureau of Children's Guidance, New York, recently said: "If I were called upon to indicate the most outstanding need in the field of education, I would unhesitatingly say that it was a more sensible conception of the criteria upon which the selection of the teacher should be based, and a more dependable technique for the carrying out of this selective process."

It is the opinion of Whittier that no better opportunity is presented to individuals of means for the advantageous use of large sums of money than by creating a substantial endowment for the carrying on of scientific research into all child problems in this state-maintained laboratory at Whittier.. This could also provide for training of specially selected teachers and social workers who would return to local communities trained and qualified to meet the needs of special problem children, and thus materially assist in preventing delinquency.

FRED C. NELLES,
Superintendent.

REPORT OF DR. LEONARD STOCKING, MEDICAL SUPERINTENDENT
OF AGNEWS STATE HOSPITAL, ON RESEARCH AND ITS APPLICATION
IN THE AGNEWS STATE HOSPITAL.

MR. WALTER D. WAGNER,
Director of Institutions,
Sacramento, California.

In compliance with your request, I herewith submit my report on Research and its Application in the Agnews State Hospital.

This hospital has stood for all that is best in construction, equipment and methods; and results justify all expenditure and effort. Its physical plant is not surpassed. It has been independent and progressive in its methods. It has discarded many old and generally accepted ways, and adopted new, and some quite radical ones. We have ventured into the field of experiment and research enough to know there are great possibilities yet untried in psychiatry, both in determining causative factors, and methods to be utilized to restore.

For organic troubles we must look to the physical laboratory for solution; for functional, without any apparent pathological physical change, to the psychological. For the pathological physical causes, be they germinal or chemical, we must seek physical remedy. When we can find no such causes, it is useless to resort to mere empirical physical and medical remedies. When the condition is psychic, as far as we can determine by manifestations, then the remedy must be sought by such methods as will reach these psychic changes and again coordinate thought and action and restore the individual personality to its normal plane.

Along these two lines we have been moving, but too slowly. We are now going to push forward in investigation, research and experimentation, putting into practice any newly acquired knowledge, and also our present conceptions of the possible.

No chemical analysis that opens up new possibilities of the discovery of toxins, no revealing of cellular change, no effort to free the tissues from microorganisms should be overlooked, knowing, as modern science does, the importance of their consideration, especially in the more destructive and deteriorating diseases.

Along this line, we now have to our credit the most reliable known test of abnormality of spinal fluid, a mastie perfected by Dr. Cutting of our staff, now in general use throughout the world, and quoted in all recent text books as Cutting's method.

We can not go too far along the line of research with microtome and microscope, applying exact clinical methods to investigation of nerve centers. Our pathologist, Dr. Proescher, has been making, and is still engaged in some heretofore untried methods of research to determine the morphologic and biologic character of the spirochaetes found in the central nervous system of paretics. His investigations promise some interesting results. His experiments must, however, be many times repeated, and on a larger scale before definite conclusions can be reached. Also, seeking an explanation for the unsatisfactory results obtained in paresis with salvarsan, he has started some experiments in relation to the distribution of arsenic in the spinal fluid.

As we are frequently asked by wives of paretics if they might not have become infected because of their relation to neuro-syphilitics, Dr. Mullen examined the blood of seventy-six such wives, whose marriage occurred after all evidence of infection of the husband had disappeared, to determine if it might be possible for infection to occur through fetal circulation; with the result that in no case of this number was evidence of infection found.

There is no more important chemical work than that in relation to the discovery of toxins. On the assumed premise that a toxicosis of unknown character and origin (possibly alimentary or endocrine, as some think) exists in dementia præcox, we are engaged in a series of experiments and tests, chemical and otherwise, of the blood of dementia præcox patients. Of course a great amount of work has to be done with a large number of cases to verify any findings.

But with all the scientific mechanism, which we should have to continue the study of modern biology, we must keep in mind the tendency to become too materialistic; so inclined is the pathologist to attribute mental disturbance entirely to organic lesions. Microbes have played the leading role as the cause of all disease. Now internal secretions hold the center of the stage!

There is no doubt but inquiry and experiment towards a better understanding of the endocrine system is opening up a new field of enlightenment and treatment. Its basic ideas and main results bridge the gulf between positive and practical information of science and the psychology of emotions and thought, and their direct effect on the body, whereas the glands in their relation to personality, form the other end of the bridge. Recognizing the possible lack of proper functioning of glands of internal secretion, we have done considerable experimenting in a variety of cases with gland treatment. Also we are making some studies in the relation of epilepsy to certain endocrine glands.

However, psychopathic and neurotic maladies are not dependent alone on the action of any one organ or function, but on a condition more or less common to all. In fact, physical disorders are often not associated with any discoverable physical lesion. When the brain is affected only in function, without some discoverable physical lesion, such as hyperemia or anemia, inflammation, hemorrhage, or tumor, the problem has been dismissed as incomprehensible.

No doubt the psychoanalytical movement has been of great value in stimulating experimental work along this line; still it has overreached itself in its claim as a panacea for all mental ills to such a degree that many of the broadest minded psychologists now repudiate it, even to the extent of asserting "Freudian psychoanalysis should be openly declared a fraud," inasmuch as it has become "a sort of astrology full of superstitions, symbolizations, dream vagaries with arbitrary interpretations, based on sex perversions."

Although we owe a debt to Freud and his followers for developing a new and definite analytical science for obtaining a deeper knowledge of the subconscious, his deductions are neither all-comprehensive nor final, and the time is ready for a deepening and widening of the meaning of the term beyond the limitations of any one method, on the broader basis of the sum total of all metaphysical insight obtained by definite scientific means. Not only dreams, symbols and word associations should be made the foundation of investigation, but everyday actions,

physical characteristics, life, heredity, environment, tendencies, associations, the likely course of impulses, etc.

Dr. Hawley, also of our staff, has been engaged in extensive comparison of personalities in different forms of mental reaction to determine tendencies which may be checked before they result disastrously.

All psychology as practiced today is largely experimental, but only by profound and patient inquiry in such institutions offering the widest opportunity, can it be raised to an accurate science, which is the ideal goal. Much of this must be done on the basis of the determination of the relation between the psychical and the physical.

The late Dr. Whisman of the Agnews staff, made anatomical, physical and endocrine measurements of a large number of dementia præcox in comparison with an equal number of normal individuals.

Precise and reliable evidence brings before us the constant parallelism correlating scientific principles in various branches of knowledge. We have done some work and deduced some conclusions in regard to reaction of pupils to different colored lights, enabling us to speak of different degrees of reaction in terms of color.

No analysis should be removed from the sphere of daily activity, or separated from the ultimate aim of establishing a new system of reactions and coordination in feeling, thought and action. A mental suppression, a tendency or obsession should be discovered only to be corrected, and no method which reaches only as far as investigation (which has been too much the limited aim of the psychoanalyst of the past) and not to the goal of readjustment, is worthy of the name of mental science.

It is far easier in physical life to reproduce necessary equilibrium than in psychical, when, instead of cells, we are dealing with obsessions, delusions, hallucinations, multiple personalities, and addictions. Through studies by Dr. Hawley of narcotic addicts with reference to physical and mental make-up, emotional characteristics and morbid inclinations, also heredity, the conclusion has been reached that they are constitutional defectives, unless, perchance the habit is acquired accidentally. If this be true, it calls for one of the most important applications of psycho-dynamics, in combination of course, with proper physical attention, aiming at awakening a corrective consciousness within.

Certain studies in hallucinations, the examination of the heart by X-ray of dementia præcox, as to its variation from normal, as claimed by some, are other investigations now being carried on. Our present problem, while carrying on our work with as advanced methods as possible, is to clarify theoretical suppositions which may be then used to build a foundation on which a broader system of mental science and treatment can be based. Even our present classification, dementia præcox, manic depressive, etc., though a great advance over previous methods, is not scientific, satisfactory, nor fair. Some of the terms used are too broad, and still leave one in doubt as to the real character of the departure from normal. I would prefer more descriptive terms, such as depressions, elations, suppressions, repressions, disassociations, split, or multiple personalities, etc.

From such scientific analysis of the personality of each patient must proceed the guidance of his life. Here is the real field of the alienist. Physical and mental reeducation must go hand in hand,

equally exact and scientific. A patient's activities must become a personal study. He must not be kept just busy in a routine of work, which, though often an efficacious basis of treatment, may be misused, if it maintain him on the same plane of low mental activity as has been a part of the pathological system of his life, instead of serving as a means of lifting him to a higher type of personal consciousness. Here is clearly evident the misuse, as well as the value, of therapeutic industries. They should be really therapeutic, and not merely misapplied work.

The readjustment of mental reactions and activities into new channels, depends on the knowledge of the physician reduced to a science of precision by research and experiment in mental phenomena, and on the means at hand for treatment in environment, care, activities, etc. These should be exemplified in the very morale and daily life of such an institution by the attitude of physicians and attendants to the mentally ill, by activities stimulating functioning on right lines, by surroundings that appeal to the higher consciousness through the senses.

Our present hospital affords these in strong contrast with the old asylum I found here, of long, dark corridors, massive doors and barred windows; from the exterior imposing but repellant; inside uncomfortable and depressing, with bare floors and walls, no curtains, no pictures, no flowers, no embellishments of any kind; meager furniture of rough heavy benches, and a few chairs of oak plank for the purpose of restraint; dining tables furnished only with tin plates and cups and pewter spoons. Add all forms of mechanical physical restraint: muffs, straps, jackets, etc., and airing and recreation only in crowded, dusty yards, enclosed by high brick walls, with guards or keepers rather than nurses and attendants, and we have a condition showing lack, at that time, of comprehension of mental disturbance, and an environment from which only disastrous results could be expected.

In contrast, our present attractive, homelike buildings, light and airy, with pleasing furnishings, are uplifting and hope-inspiring. With the old conditions have gone all forms of mechanical restraint, as well as barred windows and bolted doors, the pens supplanted by attractive parks.

The object is to make the patient conscious of new life and mental viewpoint by whatever means best serves, whether it be reeducation of will and reason—or electricity.

We seem to be only tapping such hidden powers as electricity in experiments with it in restoring hearing and silencing head noises, in changing the motion vibration of the body, in stimulating reflexes, whereby consciousness is directly reached. But it must not be forgotten that muscular movement generates electricity statically, and that controlled motion effecting coordination of mind and muscle, can not only relax tense nerves and centralize consciousness, if under expert direction, but liberate dormant reserve energy as effectively as light therapy instills it through the stimulus of sun baths, ultraviolet ray, actinic ray, etc., which should be indispensable in such an institution.

Much of the physician's direct mental treatment in all cases must be made along the line of suggestion aiming at self-control in physical, mental and moral actions. This must be preceded and accompanied by therapeutic measures to induce a condition of suggestibility and

strengthen its power. But in such disturbed cases as offer resistance to suggestion, made in the usual ways, lies one of the most fertile fields for research. It is evident that a dynamic suggestion is necessary to awaken the ego in such cases as melancholia, conflict of personalities, those under the sway of fixed delusions, hallucinations, perversions, etc. Since all abnormal mental states such as hypnosis and trance are repudiated, research into the possibility of a state of consciousness which may be utilized for the purpose of such therapeutic suggestion should result in one of the greatest contributions to psychotherapy.

In all this, doctors must learn new and progressive handling of mental material, and where can better opportunity be found than in hospitals for the insane where are seen the most severe forms of psychopathic disease? If skill and knowledge renders physicians capable in research, their influence should be great—far beyond the institution of their active field. Positive scientific and practical information as to operation of the mind is perhaps the greatest need today. Practical methods of enlightening the physician in general practice would probably prevent a large percentage of mental disease, not due to organic deterioration. These physicians look to us, with our opportunity and facilities, to furnish them with the science they can obtain in no other way, with their limited opportunity for experience and the absence of any adequate instruction in the schools in this, still experimental, science.

And what of those enigmas confronting us on all sides in youthful criminals? Penal authorities and physicians acknowledge their utter inability to solve these incomprehensible problems on any physical basis, even that of glands, though they may indeed be a very efficient connecting link. Observations gathered by psychiatrists on mental disease must be the way of greater enlightenment of the problem of criminals, as well as that of the insane, and the laboratory is the state hospital.

Knowledge of mental processes, like that of any other science, is established by research, and thoroughly tested laws. Isolation is as necessary in insanity and crime as it is in smallpox or leprosy, but it need not necessarily be a hopeless isolation, which bespeaks only our stupidity. The mere incarceration of a smallpox patient would never have given to the world a preventative vaccine.

Neither will human interest alone solve the enigma. We will continue to read of the atrocious crimes committed by criminals treated according to the most humanitarian methods of parole, etc., until we will be compelled to seek scientific methods, not to be found in mere psychology and philosophy, but by the most penetrating means of research into mental phenomena which reveals the working of the soul machine. Mental science can no more progress without this anatomy of the soul than physical science can without the anatomy of the body.

The day has come when every prison should have psychiatrists on its staff, and where are they to be prepared and trained, but in the state hospital for the insane, equipped for research, where alone the material is at hand?

It must not be lost sight of, however, that the understanding of mental states demands not only scientific training, but a free intuitive insight which makes the equipment of the true psychiatrist even rarer than the make-up necessary for the mere scientist.

We are on the threshold of discovery in the psychophysical. It would seem as though physical science, with its limitations, had become more or less static. Even its latest advance in endocrinology borders on the metaphysical. The psychophysical is of the future. We *know* nothing as yet. We meet incomprehensibilities at every turn. What more inspiring to endeavor and expenditure?

Respectfully submitted.

LEONARD STOCKING,
Medical Superintendent.

November, 1924.

REPORT OF MEDICAL SUPERINTENDENT, MENDOCINO STATE HOSPITAL.

TALMAGE, CALIFORNIA.

RECONSTRUCTION.

Recommendations as suggested in the last biennial report have been completed as follows:

Ranch ward replastered and painted. The original beaver board has been replaced by metal lath and plaster throughout and same painted in suitable light colors.

Assembly hall replastered, painted, stage removed, and hardwood floor added. Moving picture machine moved outside assembly hall in fireproof addition.

Wards 4, 5, 6 and A, B, C replastered on metal lath, new concrete floors where needed (water sections and pantries), maple flooring on halls, and linoleum in dormitories, also painted in light color. This work has placed the nine wards, six male and three female, situated in main building, in a satisfactory sanitary condition. They are now light and comfortable and easily cared for.

The construction of the new paint shop, repair of ranch foreman's cottage, and removal of the carpenter shop has not been begun, as the other work was considered more important.

A shelter garage housing twelve automobiles has been constructed.

Additional cold storage capacity for milk, vegetables, and other supplies, with additional compressor has been installed.

Several rooms in basement have been completed for employees by institutional labor.

The remodeling of kitchen is completed.

The Imhoff tank is completed and in operation, giving satisfactory results.

The irrigation system is two-thirds completed and has materially increased the production of the ranch. It has been so constructed that water for irrigation purposes is available from either pumps or reservoir system.

The metal pipe line from the reservoir to service tank and from ranch wells to service tank, replacing the wood stave line is completed, which with a new pump of greater capacity, permits the use of well water for domestic purposes, entirely eliminating danger of possible contamination of drinking water, and in addition providing better water for boiler and laundry use. The reservoir water will hereafter be used only for irrigation purposes and fire protection.

CONSTRUCTION.

The receiving building begun during the spring of 1924 is well under way and progressing satisfactorily. This building will have a capacity of sixty patients, thirty males and thirty females, each housed in separate wings.

A separate kitchen has been added for the preparation of food in this building alone.

It will furthermore contain a hydro department, surgery, clinical laboratory, dental surgery, clinical conference room, drug room, and examination rooms.

The third floor center will be equipped for the medical and surgical care of sick employees.

This building will be modern in every respect and should aid materially in the care and treatment of acute mental admissions.

GENERAL TOPICS.

Nineteen hundred fruit trees; apple, pear, and prune, were planted in February, 1923, and the loss to date has been less than 1 per cent. Additional acreage of blackberries and red raspberries has been planted, and stock purchased for planting strawberries, currants and gooseberries during the spring of 1925.

The vegetable gardens have been moved to the ranch and this transfer has been justified by an increased quantity and better quality of products. More ground at the ranch will be given over to this department as need demands. The change in the situation of the vegetable gardens has resulted in increased quantity and variety of vegetables extending over a longer period for patient consumption. It will also be possible to can a greater variety of vegetables for winter use, as the practicability of this method has been demonstrated. When the new orchard comes into bearing it will be possible to issue fresh and dried fruits in sufficient quantity. The lack of fresh fruit and berries has been noticeable in the past. In general, the food balance and preparation has been improved during the past biennium. We have demonstrated the possibility of satisfactorily growing potatoes and beans in quantity sufficient to warrant the use of additional land for this purpose.

All U. S. Veterans' Bureau patients were removed to the U. S. Veterans' Hospital No. 24, Palo Alto, California, in March and June, 1923. Such veterans as are now in the hospital have been admitted on regular commitment and have been held not subject to hospitalization by the U. S. Veterans' Bureau under their own ruling.

The reconstruction of wards has materially increased the comfort of patients, as is shown by individual comment.

The use of moneys derived from interest on patients' trust fund, made possible by the last legislature, has permitted the purchase of a high grade reproducing piano for the amusement auditorium, together with a new piano, phonograph and records for ward use, thus affording amusement for the greatest number of inmates. The addition of new recreation grounds mentioned under "Future Development" will materially add to the comfort and amusement of patients.

By the frequent checking of the condition of patients by physicians and the discharge or parole of such as are in condition to live outside of the institution, it has been possible to keep down the population of the hospital. Since the transfer of the last veteran cases to Palo Alto in June, 1923, and excluding seventy-five patients received from the Southern California State Hospital in the emergency, the population during the past year has increased only four.

PERSONNEL.

September 1, 1923, Dr. Alice S. Cutler resigned.

May 14, 1924, Dr. Rosalie McAdams appointed to fill the position.

August 1, 1923, Dr. F. A. Irmen resigned.

November 18, 1923, Dr. F. F. DuPree appointed to fill the position.

May 31, 1924, Dr. F. F. DuPree resigned.

December 31, 1923, J. F. Trivett resigned as acting business manager.

January 1, 1924, F. E. Mason appointed to fill the position.

June 30, 1924, E. C. Caffrey resigned as chief engineer.

July 1, 1924, Fred Getchell appointed to fill the position.

FUTURE DEVELOPMENT.

A building program should be instituted, sufficient to care for the increase in population and provide for relief from over-crowding, both of which conditions exist throughout the state. The situation and contour of the grounds at this hospital lends itself admirably to expansion. With moderate addition to our present agricultural land, an ultimate population of 2500 can be cared for. We have demonstrated that a sufficient water supply can be developed to care for the above number of patients.

Additional quarters for employees are necessary, as many employees are forced to live off the grounds under present conditions.

Quarters for nightwatches should be built in the proper situation where they will not be disturbed by various activities about the institution.

The present boiler house is situated on ground above the elevation of the other buildings, necessitating pumping all returns, which is expensive. The present boiler capacity is inadequate and will be more so with the addition of the receiving building now under construction and future buildings. In view of the above conditions, a suitable site for the heating plant has been selected and new buildings with additional boiler capacity are requested. It is further suggested that, in order to make a unit of industries, the laundry, gas plant, mechanical department and cannery be moved to the proposed site of new heating plant. The removal of these industries, together with building of new paint shop and removal of present carpenter shop to newly-selected sites, will make it possible to use the ground now occupied by these industries as recreation areas for both male and female patients.

The further remodeling of halls and basement of the main building including the two wings, with the principal idea of fire protection and sanitation, should be cared for during this biennium.

The following tables show farm, garden, and dairy products and articles made in the sewing room during the biennium:

Showing Quantity of Products of Farm, Garden, Dairy, Etc.

For seventy-fourth fiscal year, ending June 30, 1923.

| <i>Product</i> | <i>Quantity</i> |
|------------------------------|-----------------|
| Apples, fresh ----- | pounds, 3,880 |

APPROPRIATION FOR SALARIES AND SUPPORT

We will require for salaries for the biennial period, July 1, 1925, to June 30, 1927, \$367,970. The increase in salary appropriation asked for is owing to the increase in personnel when the receiving building is completed, which is expected to be by July 1, 1925. The increase amounts to a total of \$1,230 a month.

We will require for support during the biennial period, July 1, 1925, to June 30, 1927, \$355,000.

Respectfully submitted.

DONALD R. SMITH,
Medical Superintendent.

REPORT OF MEDICAL SUPERINTENDENT, NAPA STATE HOSPITAL.

IMOLA, CALIFORNIA.

HONORABLE WALTER D. WAGNER,
*Director Department of Institutions,
Sacramento, California.*

DEAR SIR: In compliance with the requirements of the law, the biennial report of the operation of the Napa State Hospital, for the seventy-fourth and seventy-fifth fiscal years, ending June 30, 1924, is presented herewith.

Incorporated into this report are brief statistical tables summarizing for your inspection some of the more important features of the movement of patients during the biennium.

Following these tables is a condensed statement of improvements made to our hospital plant and property.

GENERAL STATISTICS FOR THE TWO-YEAR PERIOD, JULY 1, 1922, TO JUNE 30, 1924.

| Incoming— | Men | Women | Total |
|--|-----|----------|----------|
| Insane—First admissions | 690 | 361 | 1,051 |
| Readmissions | 149 | 64 | 213 |
| Transfer from other institutions | 9 | 67 | 76 |
| Alcoholics | 20 | 5 | 25 |
| Drug addicts | 40 | 22 | 62 |
| Totals | 908 | 519 | 1,427 |
| Outgoing— | | | |
| Insane—Discharged—Recovered | 92 | 67 | 159 |
| Improved | 210 | 114 | 324 |

| Increase in population— | | | |
| Seventy-fourth fiscal year, July 1, 1922, to June 30, 1923.....Dec. 25 | | Inc. 24 | Dec. 1 |
| Seventy-fifth fiscal year, July 1, 1923, to June 30, 1924.....Inc. 40 | | Inc. 73* | Inc. 113 |
| Average yearly increase in population for 10-year period, ending | | | |
| June 30, 1924 | 21 | 37 | 58 |

* Includes sixty (60) female patients, transferred from Southern California State Hospital, October 11, 1923.

LABORATORY REPORT.

During the year July 1, 1923, to June 30, 1924, blood Wassermann tests were made of the seven hundred and sixty-three (763) patients admitted. Of this number the following results were obtained:

| | |
|----------------|-----|
| Negative | 618 |
| Positive | 145 |

The positive cases represent 19 per cent of the total admitted.

Spinal fluid examinations were made of the 145 positive blood Wassermann cases, and 40 per cent of these 145 cases were positive to the spinal fluid test.

OCCUPATIONAL THERAPY.

The following report of the articles made by the women patients in this department covers the year July 1, 1923, to June 30, 1924. We are not able to present a statement for the year preceding this, as the former supervisor of this work left no records on her departure from our service.

The number of patients employed in this needlework varies from fifteen to thirty. Frequently on afternoons of each week, coffee and cakes are served to the women patients in the classroom, as a special reward for their work.

The articles completed by the women patients are sold throughout the year, and two bazaars are held during the year to attract new patrons of our fancy needlework. Exhibits are made at the State Fair at Sacramento each year to encourage support of this work, and to establish new customers.

Department of Occupational Therapy.

| Crochet yokes | 8 | Rugs given to wards | 69 |
| Pillow tops | 4 | | |
| Baby dresses | 40 | Sales for year | \$2,089 85 |

Proceeds from sale of this needlework are used in the purchase of phonographs and records, radio equipment and maintenance, subscriptions to monthly magazines and music for our orchestra and band.

AMUSEMENT AND RECREATION.

We have continued our weekly entertainments for the patients. This consists of a feature picture film one week, alternating with a dance

and short subject picture films the next week. Special programs are prepared and presented at Christmas time, and Fourth of July celebration. During the summer months on Saturday afternoons baseball games are held for the patients. The hospital team is made up of employees and patients, and competes with baseball teams from the city of Napa.

Radio sets have been installed, and have proved an important entertainment feature. One of these sets was installed in the Francis cottage, our workmen's quarters, and one set at the Spencer ranch, which is rather isolated from the activities of the main hospital.

IMPROVEMENTS DURING THE BIENNIUM.

Many improvements have been accomplished in this period, and we are grateful for the efficiency gained in the operation of our plant.

Two new cottages were built for working patients at two of our ranches, the Spencer ranch and poultry ranch. The cottages have been splendid additions to these properties, as the old buildings were in very badly dilapidated condition. These cottages provided modern sanitary quarters for the patients working at these ranches, and have added greatly to their comfort and contentment. These buildings were constructed by hospital labor.

A dehydrating plant was built at the Smith-Brown ranch, and has proved very satisfactory in handling the fruit crop which is increasing each year, due to new orchard planting.

A concrete sewer line was constructed to the Napa River, and connected to a new irrigating system for our field crops. At the vegetable garden, a 12" well was put down, insuring an adequate supply of water for irrigation. The new air compressor, installed for pumping from the three deep wells at the rear of the main building, has greatly increased the flow of water from these wells, and assures us of a plentiful supply of water for domestic purposes during the dry seasons.

The old fence along the county road, on the north side of the hospital property, has been replaced with a modern wire fence.

New shops have been built in a group at the rear of the main building, for the tinsmith, shoemaker and painter. These new shops provide comfortable, well-lighted quarters, being built by hospital labor, to fit the needs of the work carried on in them, and, being constructed of hollow tile, have reduced the fire hazard of the former quarters.

Our crematory has been completed and placed in operation. This provides a more sanitary method of disposing of the unclaimed remains of deceased patients, and solves the problem of setting aside additional ground for the cemetery.

At Hoisholt hall a large ventilating system has been installed, thereby eliminating the discomfort experienced during our entertainments.

The Manor house, formerly the residence of the Medical Superintendents, has been reconstructed and made into an apartment house, for officers and employees.

Our orchard area has been increased each year, and at present we have approximately 220 acres of various kinds of fruit.

Farming operations for the year ending June 30, 1924, have been conducted at a profit, as will be shown by the following table:

Statement for the Year, July 1, 1923, to June 30, 1924.

| | |
|--|--------------|
| Production at the dairy amounted to----- | \$32,005 11 |
| Production at the swinery amounted to----- | 9,457 01 |
| Production at the poultry ranch----- | 9,436 04 |
| Production at the farm, orchard and vegetable gardens----- | 57,970 64 |
| Total----- | \$108,868 80 |
| The total expense charged against these activities for the year was----- | 71,506 87 |
| Leaving a net production valuation over expense----- | \$37,361 93 |

We wish to acknowledge our indebtedness to the Knights of Columbus, who have provided each week candy, cakes, raisins, toothpaste, tobacco and cigarettes for our ex-service patients.

We greatly appreciate the cooperation of the Jewish committee for personal service in state institutions.

Our thanks are due you, Mr. Wagner, for your cooperation, guidance and assistance during your incumbency.

Respectfully submitted.

J. M. SCANLAND,
Medical Superintendent.

REPORT OF MEDICAL SUPERINTENDENT, NORWALK STATE HOSPITAL.

NORWALK, CALIFORNIA.

MR. WALTER D. WAGNER,

Director State Department of Institutions,

Sacramento, California.

DEAR SIR: I have the honor of submitting herewith, the following biennial report of the Norwalk State Hospital covering the period ending June 30, 1924.

A synopsis of the more important tables, which has been forwarded, will show that our population on June 30, 1922, was 640 patients and that our population for the biennium ending June 30, 1924, was 971 patients, an increase of 331 patients in two years' time. This is an extremely large increase for a small institution of limited capacity and we are carrying an excess of about 100 patients, nearly 40 of these sleeping on the floor. In an institution of this small capacity an excess can not be taken care of with the same ease and comfort as in the larger institutions with their greater elasticity in handling patients.

The oil situation is now permanently settled and I see no reason why we should not proceed rapidly with the original building program that was decided upon some time ago. With the rapidly increasing population of southern California and with only two institutions in the southern part of the state, undoubtedly we can look for a very big increase in the number of commitments in the next two years and as the Patton institution is not expected to go beyond a certain maximum, unquestionably this hospital will carry the big majority of all commitments made in the south.

During the past two years cottages 11 for female, and 22 for male patients were completed. At the present time there are rapidly being completed two additional cottages, one for male patients and the other for female patients, located on the twenty-acre tract which connects the main institution with the Norwalk boulevard. They are so placed as to admit the future construction of six additional cottages on this tract. There is also being completed a 160-horsepower steam boiler to care for our increase in buildings and population.

On or about May 16, 1924, the dairy herd and hogs were attacked with the foot and mouth disease and it was necessary to kill 62 head of cattle and 203 hogs. Fortunately we had approximately thirty cows in another portion of the grounds in pasture which escaped infection. This can be a nucleus to begin our next herd.

During the biennial period ending June 30, 1924, 116 patients were sterilized at this hospital, 70 males and 46 females. This we consider a large number for a small institution.

Statistics show that heredity plays a large part in causing insanity and it is my belief that every person of the proper age should be sterilized before leaving an institution of this kind. This is in the line of preventive medicine. We believe if this procedure were followed in all state hospitals for the insane that in the future it would help to decrease the number of insane patients to a large extent.

We have had some most remarkable recoveries following sterilizations both in men and women. Many cases of dementia praecox are greatly benefited as well as those of manic depressive psychoses. It is claimed that this is due to the absorption of the internal secretions and we believe it to be a fact, as has been shown in so many of our cases. Many of our patients, both men and women, who have been greatly excited, dangerous to themselves and others and who have shown no signs of improvement, have cleared up and become apparently normal following these operations and have been able to leave the institution for a long period, have proven themselves useful men and women and have had no return of their mental trouble.

In the female patients particularly we find that it assures a longer period of remission from their mental trouble. Many women during the childbearing period vibrate back and forth between an institution and their homes. They are suffering from a mental trouble and apparently become cured at the hospital, then return to their homes and become pregnant. This assures them another mental breakdown. If these women were always operated upon before returning to their homes, we find it would assure them a longer remission and in many cases it has been found they remain at home apparently recovered. This substantiates the above statement.

The law governing the sterilizations in this state is a good one and we believe that California leads at the present time in this line of work; however, enough of it is not being done and we would urge more attention to the sterilization of insane patients, thereby reducing the number of admissions to the state institutions.

I regret that I can report little in the way of laboratory, X-ray or hydrotherapy statistics because of absence of any such departments and equipment.

FUTURE NEEDS.

Our proximity to Los Angeles requires the Los Angeles County authorities to commit to this hospital those in a serious and critical physical condition as they can not take the long trip to the other institution. This naturally increases our death rate and also it is difficult to give them the proper care without a receiving and treatment building. There are only two tubs in the two cottages now being used for receiving patients and this is our entire hydrotherapeutic equipment.

The people in the southern part of the state are entitled to an institution where their friends and relatives can receive care and at the same time the proper hospital treatment. I am asking for a receiving and treatment building with a capacity of 160 patients.

To care for our great increase the next two years we should undoubtedly have four more cottages of the type just being completed which will house 480 patients.

Next to the need of a receiving and treatment building, this institution is very greatly in need of a building for the care of noisy, violent and disturbed patients. The buildings now constructed are entirely lacking in single rooms and it is impossible to care for the chronic disturbed and violent patients without such a building both for the protection of other patients and the proper treatment of the disturbed and violent ones. I am asking for two cottages to hold approximately 164 patients to care for this class.

At the present time there are absolutely no quarters for employees except a dormitory over the dining room. The balance of the employees are living in disturbed and noisy wards. Quarters should be provided not only for the employees we have at the present time but for the large increase that we expect with the increase in patient population.

This institution has had no room or building suitable for amusements or religious services. We receive frequent complaints from friends and relatives asking why we do not provide some form of amusement. By all means an assembly hall and chapel should be built, even though of small capacity.

We are greatly in need of cottages for our assistant physicians, as they are living in small buildings of two rooms which are very inadequate and cramped, especially for a family having children. The business manager and secretary are also living in very small buildings that could be used for housing employees or nightwatchmen.

There is no lighting system on the grounds of this institution and this is very badly needed.

An addition to the septic tank is necessary to care for our increase in population.

The present smokestack is only a temporary one and can not care for our increased boiler capacity. It is completely rusted through and about ready to fall down.

We should have a regular chicken yard, as the present chicken quarters are only temporary and the chickens are being cared for in small coops.

We should by all means have a farm colony building in order that the patients can avoid the traveling back and forth from the institution and be at the farm ready to go to work and leave work without losing the long time taken in traveling to and from the institution.

In presenting these numerous requests I only ask for actual needs. The many items of building and equipment that are being used in other institutions and thought necessary for them I have eliminated.

I am sure that the public will approve of my earnest desire to give them efficient and real hospital service and I hope and trust that the day is not far distant when we can discontinue merely custodial care, cease to be a hospital in name only, and become a genuine hospital taking equal rank with the other state hospitals of the country.

Yours respectfully.

EDWIN WAYTE,
Medical Superintendent.

REPORT OF MEDICAL SUPERINTENDENT OF THE
SONOMA STATE HOME.

ELDRIDGE, CALIFORNIA.

MR. W. D. WAGNER,

*Director, Department of Institutions,
Sacramento, California.*

DEAR SIR: Herewith I submit a report of the biennial period, ending June 30, 1924.

As an introduction, permit me to call your attention to some data taken from our statistical tables, to wit:

At the beginning of the biennial period, July 1, 1922, there were enrolled 1808 patients, 895 males and 913 females. At the close of the period, June 30, 1924, there were 2225 patients, 1149 males and 1076 females. Six hundred nine patients were received during the two years, 340 males and 269 females. Fifty-nine males and 68 females, totaling 127, died during the period and 62 males and 38 females, totaling 100, were discharged to parents or guardians or transferred to other state institutions. Seven hundred thirty-six applications for admission were received during the biennium and we had a waiting list on June 30, 1924, of 1019 applicants. A recent estimate of the feeble-minded in California not cared for in institutions gave an approximate total of 16,000.

The general health of our patients has been good. An epidemic of diphtheria developed in May, 1923, and continued over such a long period of time that we thought best, in order to combat the disease and to prevent further epidemics, to make a Schick or Kellogg test on all patients and immunize those who reacted to the test with toxin-antitoxin. With the aid of the State Board of Health this was done and is being continued on all new admissions and those returning from parole.

To date we have sterilized 753 cases, 279 during the biennial period. Tonsils and adenoids were removed where indicated. Also operations for other conditions, totaling 102. Eleven hundred and forty cases were treated at the hospital during the two-year period and those sent for clinical dressings, etc., numbered 13,903.

Vaccinations, Wassermanns and the Schick or Kellogg tests are continued on every case admitted, in addition to the complete physical and mental examinations.

Treatment of epilepsy has not been gratifying but in selected cases we have given our patients the benefit of various remedies with a small amount of success. Individual treatments must be long continued if even partial success in the treatment is to be attained. We have started some poly-glandular treatments but as this is rather a new treatment with us, I am not prepared to give any definite data regarding same.

I am glad to report that the last two years have been full of constructive work at this institution. This has been very gratifying and it gives me pleasure to report the following permanent improvements, additions, etc.:

Assembly hall and school building.

Assistant physician's cottage.

One-story building for female patients (concrete).

Two employees' cottages, totaling 43 rooms.

One cottage at Farm Center to house 30 patients.

Addition to Sealight Camp to house 25 patients.

Complete remodeling and changing about of the main kitchen, officers' and employees' dining rooms; also a new kitchen range and other equipment installed. Complete remodeling and changing of refrigerating and ice-making plant.

Paint shop.

Two-story garage for state cars.

Electrical substation and underground wiring system nearly completed (this work stopped on account of shortage of funds).

Steam service line installed to the most southern group of cottages for female patients.

Alterations and improvements to the old manor house.

Playground equipment installed about many of the cottages and the main playgrounds.

One new poultry house built and some of the older buildings at the poultry ranch remodeled.

New wire fences along the county road, chicken ranch and playgrounds.

An additional 30 acres of orchard planted and 10 acres replaced.

A number of new roads, sidewalks, gutters, etc., built about the institution.

During the seventy-sixth fiscal year a new water distribution and automatic sprinkling system for lawns was started and is still in the course of installation.

One new bake oven.

A fire trail, approximately 4 miles long and 100 feet wide, was established this past summer on the western end of the main property, the land being chiefly mountainous and covering the main water sheds. This work was done under the direction of and by patient labor.

DAIRY, FARM, ETC.

Dairy.

We have made an earnest endeavor to develop our dairy herd into a herd of first class cows and the production has averaged throughout the last fiscal year 4.28 gallons of milk per cow per day at an average cost of production of \$0.127 per gallon. This field of development, if properly directed and managed, will return an increased profit from year to year.

Poultry.

A large number of eggs are required and therefore poultry raising, or, more strictly speaking, egg production, is a business that requires close care and wise management. For the first time in the history of the institution our poultry business has been successful and profitable. We have raised some thoroughbred cockerels, some of which we have sold to other institutions, and our egg production averaged over 120 eggs per hen per year. We are also able to give our employees and patients fowl to eat occasionally.

Hogs.

We have not accomplished what we would like with hogs, but plan to build up our piggery.

Beef.

On the Reynolds ranch, where there is much pasture and some waste land, we have supported a small beef herd, as well as dry cattle. This alone makes this ranch profitable.

Fruits.

I feel there can not be too much fruit raised for institutional use, as fruit forms a very necessary part of our diet. We have during the two-year period canned

24,610 gallons of various kinds of fruit and vegetables and dried 92,875 pounds of different kinds of fruit. New orchards planted will help take care of the ultimate growth of the institution. All the above means less fruit to purchase, and, if an institution can produce above the average, it creates an atmosphere that is healthy for the state, and the community in which it is located looks upon it as a real asset. This is what we are striving for.

SCHOOL DEPARTMENT.

The educational work has gone on nicely and we now have nine teachers as follows:

- 4 teachers for grade work.
- 1 teacher for kindergarten.
- 1 teacher for domestic science.
- 1 teacher for arts and crafts.
- 1 teacher for music.
- 1 teacher for physical culture.

The average school attendance for the school year was 570 per day.

PAROLE WORK.

I am pleased to report that the parole work has been very satisfactory, especially while we had full-time parole workers, which we hope to have again. Eight hundred thirteen patients have been paroled, many to parents and guardians and many have been placed at some pleasant occupation, earning from \$15 to \$60 monthly. May I add that the parole of these patients means an annual saving of approximately \$110,000 to the state for their care and therefore many times over pays for the services of social workers. It also tends to make the higher types (who are usually the problem) more satisfied with institutional life, knowing if they behave and take to proper training they will have a chance to go back into society. The feeling they have of becoming self-supporting means a great deal to these individuals. Of course, the majority of the cases are sterilized before being paroled, this having been our policy since 1918.

AMUSEMENTS AND RECREATION.

The care of our people involves not only provision for food, clothing, shelter, medical attention and education, but also provision for recreation, entertainment and amusement. This to help make happiness, health and contentment, and with this end in view we have moving pictures, entertainments, parties, picnics, ball games and much good playground apparatus, including a large merry-go-round. We make Christmas and the Fourth of July banner days for entertainment and amusement. We also have Sunday school and church services. Last Christmas we had a Christmas tree on the front lawn for the first time.

SPECIAL INSTITUTIONAL NEEDS.

- Two cottages for patients, including furnishings and service connections.
- Repairs, improvements and equipment at dairy, poultry yard and piggery.
- To finish underground electrical system, street lighting and rewiring some of the older buildings.
- Completion of the sewage disposal plant.
- Bake oven.
- New garages for employees.
- Water development.
- A general, receiving and isolation hospital, including furnishings and service connections.
- One cottage for assistant physician, including furnishings and service connections.
- One cottage for employees, single men working days, 30-room capacity, including furnishings and service connections.
- An addition of six rooms to the present night cottage for women, to be used for married couples working nights, including furnishings and service connections.
- Two additional schoolrooms.
- New first-class road connecting the institution with the new state highway, which is in the course of construction from Santa Rosa to Schellville, the road to be placed on our own property under the supervision of the State Highway Commission.

In May, 1924, I attended the meetings of the National Association for the Study of the Feeble-Minded held in Washington, D. C., and the American Psychiatric Association held in Atlantic City. I also visited a number of institutions in several of the eastern states. The problem of the defective delinquents was discussed at length at one of these meetings and the consensus of opinion was that they should be placed in a separate institution or in a separate unit of a penal or correctional institution and given rigid military discipline in an endeavor to bring order out of disorder. I visited such a unit at the state prison at Bridgewater, Massachusetts.

Respectfully submitted.

F. O. BUTLER,
Medical Superintendent.

REPORT OF MEDICAL SUPERINTENDENT OF THE SOUTHERN CALIFORNIA STATE HOSPITAL.

PATTON, CALIFORNIA.

HON. W. D. WAGNER,

*Director State Department of Institutions,
Sacramento, California.*

DEAR SIR: I have the honor to submit herewith the following biennial report of the Southern California State Hospital, covering the biennial period ending June 30, 1924:

MOVEMENT OF POPULATION.

A synopsis and analysis of some of the more important tables, which are submitted herewith, will show that our total admissions for the period were 1435; discharges, not including transfers to other institutions, 979; deaths, 323. Our admissions for the seventy-fourth fiscal year were 787, which were the highest of any year during the past six years.

In spite of the fact that during the past eight years the Norwalk Hospital has been functioning, making two institutions for southern California instead of one, there has been no particular reduction in the number of patients committed to this institution. This is probably due to the fact that up to the present time the Norwalk Hospital has not developed as rapidly as it should, with the result that this institution has been required to carry the larger per cent of the insane committed from southern California. With the construction of a receiving and treatment building at the Norwalk Hospital we should be greatly relieved from the large number of commitments we are now receiving.

Believing that the Norwalk institution will make a normal progress from now on our requests for additional housing facilities in this institution are limited to the reconstruction of the east and west wings.

EARTHQUAKES.

On July 22, 1923, at 11.28 p. m. a violent earthquake visited this institution, wrecking wards 1, 2, 3, 4, 5, 6 and 7, in which were housed 589 patients, making it necessary to remove this number of patients out of these wards immediately. They were crowded into other portions of the hospital until such time as we could secure proper authority to transfer patients to other institutions to relieve our distressful conditions.

On July 28, 1923, we transferred 130 female patients to Norwalk. On October 10, 1923, we transferred 25 male patients to Stockton and 60 female patients to Napa; 40 male and 35 female patients to Mendocino, making a total transfer of 290 patients to other hospitals.

Immediately following this calamity we proceeded as rapidly as possible to construct four new patients' cottages, with a capacity of 75 beds each, to meet the overcrowded condition. During the summer months we were able to sleep many patients out of doors but during the winter time it was very difficult, indeed, to give the patients the

care that they should have. The first of these four cottages was completed and opened May 1, 1924; the second, June 6, 1924; the third was practically completed at the close of the biennial period, and the fourth cottage well under construction. This has served materially to relieve the overcrowded condition.

Fortunately we had constructed three new cottages for patients from the 1921 appropriations. One cottage opened July 28, 1922; one October 16, 1922; and one December 4, 1922, giving us a total capacity in these cottages of 210 beds.

PURCHASE OF NEW LAND.

In July, 1923, we completed the purchase of the Shay property at a total cost of \$36,670, and consisting of approximately seventy acres. This gives us a total holding in the artesian belt, two and one-half miles from the main hospital, of one hundred and sixty-five acres of first-class farming and gardening land.

CHANGES IN INDUSTRIAL DEPARTMENTS.

During the period we completed a new two-story industrial building, 30' x 100'.

In the upper story we have installed our sewing department, where all the bed linen, female clothing, etc., is manufactured by female patient help, and on the first floor we have transferred from the basement our furniture, basket and brush shop, where we have been able to manufacture fibre cord furniture for all of our new cottages and for replacements on several of the old cottages.

Removing the furniture shop from the basement of the main building has disposed of a very serious fire hazard, besides giving the patients a much more comfortable quarter in which to perform their work. The same may be said of the sewing room, which was also housed in the basement.

CHANGES IN OFFICIAL STAFF.

We have been fortunate in having few permanent changes in our official staff during the biennial period. Dr. E. W. Thompson resigned January 31, 1924, after giving the hospital four years of very satisfactory service. Dr. J. C. Steenberg was appointed to succeed Dr. Thompson April 1, 1924. Mrs. Katherine Larimer was appointed parole officer June 1, 1924. Mrs. Larimer's duties will be to visit paroled and discharged patients and keep the institution in much closer contact with those who were former patients here. This will, undoubtedly, enable many patients to remain out of the hospital longer than if they received no supervision after leaving on parole or being discharged.

OCCUPATIONAL THERAPY.

In the successful care and treatment of the mentally ill this therapeutic agent has proven of primary importance, and during the past biennium has been gradually extended to include a much larger number of patients committed to this hospital.

Occupational therapy serves a double purpose. Among the recoverable type of patients it promotes materially their chances for recovery and does much to make such recovery more stable. Among the incurable types it serves to prevent deterioration and thus does much to make

the patients' residence in the hospital more tolerable and bring more happy and abundant lives to those committed to our care.

Authorities are constantly pointing out the great remedial and reconstructive values inherent in recreation and occupation as pertains to the modern care and treatment of the mentally sick. Through a widespread adoption of community programs of recreation, entertainment and occupation we may hope to develop community life comparable to that which exists in outside communities and in so far as this can be attained we may expect a more suitable environment for all types of patients committed to the state hospital. The various recreations, entertainments, occupations and industries become a matter of community pride just as the various activities of any normal community are of particular interest to the residents of such communities.

Each hospital should have its various shops and industries, a periodical magazine in which is published hospital news, its moving picture and vaudeville theaters, its chapel for religious services and other similar institutions which are found in normal communities. Men and women are committed to our hospital for the reason that they can not get along in the outside communities and an environment should be created, therefore, to the end that they may get along on the inside with a fair degree of comfort and such pleasure as it is possible to give.

Many dementia præcox cases committed to our hospital are so engrossed with their delusions and hallucinations that it is very difficult, indeed, to engage their attention or interest in anything whatsoever, with the result that these patients will assume a shut-in attitude of conduct and become completely deteriorated, ultimately leading a simple vegetative existence. Inasmuch as it is easier to leave them alone in their deterioration the average nurse will not make a determined effort to arouse them from their lethargy and interest them in some form of occupation. The result is that this particular type of patients eventually find their residence in the chronic custodial wards, where they spend the rest of their lives in a state of progressive dementia. Undoubtedly, a very large per cent of such cases, if taken early, could be trained to engage in some line of occupation and thus prevent the great deterioration which so frequently occurs.

In order to accomplish this the hospital should have on its nursing force two male and two female special nurses, who know how to do many things along the line of occupational training and possess the requisite patience to deal with such cases. Each new præcox case admitted should be placed under the instruction of one of these special nurses, being careful not to have too many under the care of each nurse at one time in order, so far as possible, to give each patient constant and personal attention. By this means many of these patients can be reclaimed to the point where they will become interested in some line of work. As each patient develops the habit of employment he or she may be assigned to some definite task and the nurse's attention directed toward the training of a new case.

In order to provide for this line of habit, or occupational training, the hospital must have numerous industrial enterprises, into which departments these patients may be graduated. To this end every possible thing which can be made with patients' help should be manufactured; for the women, weaving, basketry, crocheting, lace making, rug making, embroidering, etc., and for the men, weaving, basketry,

furniture making, brush making, toy making, printing, etc. All of these various activities may be used as preindustrial departments from which the real industries such as laundering, dairying, farming, gardening, orcharding, canning, etc., will prove to be the departments in which patients may be ultimately employed. Every effort should be made to provide additional types of work to the end that, as near as possible, every able-bodied patient will have some task to perform.

We are now making all of the chairs, tables, settees, floor lamps, ferneries, flower baskets, waste paper baskets, brooms, brushes, men's and women's clothing, bed linen, laundry nets, shoes, slippers and door mats used in this institution. Besides, we make a large portion of the harness and weave a large portion of the toweling, ticking, shirting, denim, rugs, runners, etc. Inasmuch as the law forbids the sale of such products in the open market our greatest difficulty lies in finding an outlet for our products, being confined entirely to the hospital requirements. We have outfitted completely a number of wards with our homemade furniture, which is far more comfortable than anything we could afford to purchase and at a cost very much less than an inferior product could be purchased for.

What we need most is more room to house additional occupational activities. With the reconstruction of the east and west wings we hope to have available a large basement space under each wing for the extension and enlargement of our occupational program.

I am pleased to have this opportunity to express to you my great appreciation of the very helpful attitude you have always shown toward our difficult problem. Your constant and sympathetic interest in the care of our patients and your wise counsel in our various affairs has been a constant source of satisfaction and encouragement to our entire hospital organization.

To the officers and employees of the hospital I also wish to express my appreciation of their loyal and efficient service during the past biennial period.

Respectfully submitted.

JNO. A. REILY,
Medical Superintendent.

REPORT OF MEDICAL SUPERINTENDENT OF THE
STOCKTON STATE HOSPITAL.

STOCKTON, CALIFORNIA.

MR. W. D. WAGNER,

*Director Department of Institutions,
Sacramento, California.*

DEAR SIR: Herewith you will find my report for the seventy-fifth and seventy-sixth fiscal years concerning the movement of patients, moneys received and expended and other activities about the hospital.

The sum of \$177,200 was appropriated for the building of three cottages at the state farm, furnishing the psychopathic building, boring a new well and various improvements about the engine room. This money has been expended except that set aside for the completion of one of the cottages at the farm which is well under way. Our psychopathic building has been completed and occupied for several months and we find it a great benefit in enabling us to segregate our new admissions, as by the use of this building we are able to keep our neurasthenic and quiet patients from being disturbed by those who are noisy and restless. It is our intention to have all recoverable cases transferred from the receiving hospital to the psychopathic building in order to keep them from coming in contact with the chronic and badly disturbed.

On July 9, 1923, Mr. W. H. Chesnutwood, the business manager of the Stockton State Hospital, passed away after a short illness. Mr. Chesnutwood's death was a great loss to the institution as he had been the business manager for a great many years and was thoroughly qualified in every way to attend to the duties of the office. Mr. A. G. Keagle, who has been interested in the farming industry of this country for a number of years, was appointed to succeed Mr. Chesnutwood, and is carrying on the work in an entirely satisfactory manner.

As per your request I am submitting a short article on sterilization of the insane as practiced in the hospitals for the insane in California and the Home for the Feeble-Minded at Eldridge, Sonoma County.

In 1909 the law was passed authorizing the superintendents of the various state hospitals and the Home for the Feeble-Minded to sterilize certain types of the insane and feeble-minded. It is first necessary to obtain the consent of the director of the Department of Institutions and the secretary of the State Board of Health before the operation of sterilization can be performed upon a patient. It is not necessary to obtain the consent of the relatives of the patient or of the patient himself but it has always been our custom to obtain the consent of the relatives when possible. We find very few relatives who make any objection, in fact, we have many requests from relatives to have this operation performed. If the family history is bad, that is, showing insanity in both sides of the family or cases appearing in two generations we operate whether the relatives consent or not, as long as the director of the Department of Institutions and the secretary of the State Board of Health have given their consent. There have been sterilized in the six hospitals for the insane and the Home for the Feeble-Minded, 3900 patients, 1261 of which have been at the Stockton

State Hospital; of these 858 were men and 403 women. We have been operating for sterilization for the past fourteen years, beginning in 1910, soon after the law became effective. The first case was that of a woman who had murdered her three young children, fearing that they would become insane, as her sister (who was in the Mendocino State Hospital) and her mother were insane. She had shown no noticeable mental symptoms to her family except depression, following the loss of her boy from diphtheria, before commitment to this hospital. She is still a patient here suffering from dementia præcox. She has been home on parole under supervision for short periods of time.

As I could find no literature on the subject for the operation of sterilization on the male, at that time, I inquired of one of the leading surgeons of San Francisco, who was visiting me, if he had ever sterilized a man. He replied that he had so I asked him if he would operate for us as I was unfamiliar with the technique. The operation he performed consisted of a large incision in both pubic regions such as one would make in performing a hernia operation. As a result the patient was confined to bed for over two weeks. This extensive incision I knew would not do, so after thinking the matter over for some time we decided to cut into the scrotal sac and separate the vas from the cord. This we found to be very difficult and bunglesome. Dr. M. H. Smyth, our first assistant physician, then devised the following technique for the operation of sterilization on the men: "Roll the vas between the thumb and index finger, separating it from the other structures of the cord. Fix it close against the skin of the scrotum with small tenaculum forceps. At this point make incision over the vas about 1 c.m. in length down to and exposing the vas. Lift up the vas with a strong curved needle and cut out a portion one-half inch in length. Leave the lower end free to drop back into the sheath. Tie the upper end with fine silk ligature. Sew up the sheath with fine catgut, leaving the upper end of the vas outside of the sheath, to prevent possible union of the cut ends of the vas. Operation is done in a few minutes and in insane patients best done under general anæsthetic, preferably gas. Operation is practically bloodless."

The operation on the women is as follows: "Incision is made in the median line of the abdomen—one to one and one-half inches in length, just above the pubic bone. The index and middle fingers are inserted into the abdomen and the fundus of the uterus is located by touch. The tips of the fingers are carried outward along the tube. The tube is drawn up into the incision and clamped with a small hemostat at the isthmus—this being the narrow portion of the tube and relatively free from blood vessels, making the operation practically bloodless. An incision about one-half inch in length is made in the serous covering, exposing the tube. The tube is picked up with thumb forceps and one-half inch is cut out. The uterine end of the tube is ligated with fine silk; the incision in the serous coat is closed with continuous fine catgut suture. The same procedure is done on the opposite tube. Abdominal wound is closed in layers. General anæsthetic is preferable. Operation in ordinary conditions can be completed in fifteen minutes. Patient is usually left in bed one week."

The law permitting the sterilization of the insane to my mind is one of the best things that has been done to prevent the unfit from repro-

ducing their kind. Besides this feature of the law, in many cases of the men the operation has had a very beneficial effect upon their mental condition, that is, we have had numerous cases whose mental condition improved up to a certain point and then remained stationary. After these patients were sterilized many of them recovered completely and have had no recurrence of their mental trouble. I might cite three or four cases showing this improvement.

(1) "J. T. was committed to the Stockton State Hospital in 1914, suffering from manic depressive insanity, maniacal type. He was badly disturbed, restless, excited, and had to be spoon fed. He eventually recovered from the attack and was taken home by his father on parole. After being out for a couple of months he had a recurrence of the attack and was returned to the hospital. He again recovered from the attack and was finally discharged as recovered. In 1917 he was re-committed suffering the same form of mental disturbance, went through the same circle, was paroled and again returned. At this time he was sterilized and recovered in a very short time; was taken home and finally discharged as recovered. About three years ago I met the young man in Oakland and he informed me that since his operation he had had no further nervous or mental trouble and was in perfect health."

(2) "W. L. This young man was suspected of having set fire to some packing houses. I was sent for by the district attorney of the county and while the boy showed no marked mental symptoms he was retarded in his speech and it was three or four seconds before he could seem to grasp what was said to him. Dr. Hatch, then general superintendent of state hospitals, who was with me, suggested to the judge of the superior court that the young man be committed to the Stockton State Hospital, where he could be sterilized, in hopes that the operation might benefit him. This was done and shortly after his admission the operation was performed. In two months from the time of the operation I had an interview with him and his mental condition seemed to be absolutely normal. In another month he was discharged as recovered. He was subsequently married and a year ago accompanied by his wife called at the hospital and I had a long conversation with him. He informed me at the time, that since leaving the hospital he had been well and had had no nervous or mental disturbance."

(3) "F. J. was committed to the Stockton State Hospital from the Folsom state prison suffering from manic depressive insanity. This young man had been in the penitentiary for about a year and a half and his mental condition finally became so bad that he was sent to the hospital for treatment. He would respond somewhat to hydrotherapy but never entirely cleared up for any length of time. Soon after W. L. (the previous patient mentioned) had recovered Mr. J. sent for me asking that we sterilize him as he had seen the beneficial effect of the operation on the other man. This was done and in a short time Mr. J's condition improved to such an extent that we considered he had entirely recovered. I wrote to Governor Johnson, who was governor at that time, recommending that the patient be granted a pardon as I felt that he was insane at the time he committed the act for which he was sent to Folsom. This pardon was granted and shortly afterwards the patient was discharged from the hospital as recovered. Since that time he has been living in the vicinity of Stockton and I have seen him on

numerous occasions and he says that he is well and appears normal.” We have a number of cases similar which I could describe at length.

In talking to male patients who have been benefited by the operation many claim that in about two weeks after the operation they begin to feel better, that is, their mentality improves and they feel stronger both mentally and physically. I have had a number of men at the hospital ask me to sterilize them after they had seen the beneficial effects of the operation on other patients. In cases of the women we have no direct beneficial effects excepting the fact that their minds are relieved from the fear of a future pregnancy. Many of our patients who have had a psychosis following childbirth, refuse to leave until they have been sterilized, feeling that another pregnancy would mean a recurrence of the psychosis.

Three or four classes from the universities visit us each year in order to obtain the benefits of our clinics which are held for them and also to view our operations for sterilization. All these young men and women have gone away as missionaries for the operation as we have had a number of women, whose mental condition is such that they should not bear children, come to the hospital for the purpose of sterilization at the suggestion of these nurses and other field workers.

In closing I must commend Governor Richardson for his wisdom in appointing you as the director of the Department of Institutions, for I know with your keen business ability and great store of common sense you will in the future as you have in the past make an unqualified success of the position.

Yours truly,

FRED P. CLARK,
Medical Superintendent.

DIPHTHERIA IMMUNIZATION IN AN INSTITUTION.

By F. O. BUTLER, M.D., Medical Superintendent, Sonoma State Home.

Until the discovery of antitoxin in 1890 by Dr. Von Behring, diphtheria was one of the most dreaded diseases that the medical profession has had to combat.

The mortality was extremely high in all epidemics as well as in the sporadic cases. Even with the introduction of antitoxin, which has been one of the greatest discoveries known to the profession and is a specific and definite cure if used in time, yet it has not filled the bill, so to speak, for the reason that many cases are overlooked, being considered as ordinary tonsillitis or some other throat condition. Frequently medical aid is not sought and the patient is permitted to get in a very serious condition before the severity of the disease is realized and oftentimes it is too late for antitoxin to have the desired effect, and in some instances the antitoxin receives the credit for the cause of death when in reality it was due to the absorption of toxins before the patient received the treatment. However, we all know that, if antitoxin is given in due time, not waiting for a definite diagnosis, the mortality is practically nil, but it does not preclude subsequent attacks, which may occur in a few weeks, months or years.

The cost of such treatments, if given in quantities sufficient to overcome the toxins already disseminated throughout the system, is not small by any means, and especially if it is found necessary to repeat the injections many times, which frequently occurs, and inject others who have come in contact with the patient and require a prophylactic injection, which should be the procedure in all instances.

I have been connected with the Sonoma State Home for eleven years and have experienced several mild epidemics of diphtheria and have seen many sporadic cases, all of whom received antitoxin at once, even though the case were only a suspect, always keeping a large supply on hand.

In an institution of this kind, with feeble-minded and epileptics numbering several hundred, some departments housing as many as 130 patients and too frequently crowded beyond the normal capacity, with many under 12 years of age and who, on account of their mental deficiency, have not been placed in the public schools or mingled with normal society and where they have not had an opportunity to so readily contract the diseases of childhood, the inmates are naturally very susceptible to contagious diseases, making us always on the alert to prevent outbreaks of any nature, but diphtheria has been the one to cause us the most concern.

In May, 1922, to June, 1923, diphtheria was quite prevalent in the institution, regardless of our best efforts for isolation, and, with all cases receiving antitoxin promptly, we could not stamp out the disease. We had already spent a considerable amount of money just for antitoxin alone, not counting the loss of time amongst our employees and the brighter patients who do important work about the institution. The total number having the disease during this period was 93 patients and 9 employees, totaling 102, with one death and a known record of 313,500 units of antitoxin being administered at an approximate cost of \$200 for the material.

With our inability to become free from the continued developing of new cases, we decided, even though it appeared quite an undertaking, to immunize the entire patient population and the employees who cared to submit with toxin-antitoxin all those reacting to the Schick and Kellogg test.

Through the kindness and courtesy of Dr. W. H. Kellogg, director, State Hygienic Laboratory of the State Board of Health, and his corps of able assistants, each case was given one of the tests, and out of 1614, the net population at that time, who were so tested, 331, or 20.5 per cent, were found not immune, regardless of whether they had contracted diphtheria during the more recent epidemic. The 331 cases, who reacted or were found not immune, were each given an immunization injection of 1.0 c.c. toxin-antitoxin one week apart until three injections had been given at a cost per patient of approximately 50 per cent of what 1000 units of antitoxin cost.

Six months after the last injection of toxin-antitoxin given the original group, 310 of the 331 who were immunized and still remained in the institution, were reexamined and 79, or 25.4 per cent, were still found not immune, this number again receiving the same immunization as was originally given—three injections of 1.0 c.c. toxin-antitoxin. These 79 cases, likewise the others who are on the original test, found not immune and still remaining in the institution, will be reexamined after a year's time from the last examination. It was decided that a lapse of six months is not sufficient for all to become immunized.

All new admissions and those returning from parole, who have not been examined or immunized before leaving the institution, are given the Kellogg test within a week

of their entrance and, if found not immune, are immediately given the usual series of three injections. Therefore, each and every patient who was in or has been in the institution since the original examination in 1923 has been examined and immunization injections given if indicated. These new admissions and returns from parole to October 1st of this year total 500, and of this number exactly 250, or 50 per cent, were found not immune on first test, which is quite different to the 20.5 per cent found not immune on the original 1614 examined, indicating there is far greater immunity in an institution than those living outside by approximately 150 per cent.

Amongst many of our patients many are of low vitality and several bedridden, yet not a case has developed any untoward effects from the treatment. For such good results we can not help but feel that considerable credit is due to the new toxin-antitoxin formula we have been using as gotten up by Parks of New York.

Of the 93 patients, who had diphtheria during the more recent epidemic mentioned above and still remaining in the institution at the time of the testing, 15, or 16.6 per cent, were found not immune, showing the active disease did not immunize them but a very short time.

Since the original examination and treatments and all those following, only three cases of diphtheria have developed in the institution, and two of these cases were attendants who had not been examined or immunized; the other one, a very low grade patient mentally and whose diagnosis was questionable, died before anything definite could be determined, but we are of the opinion that one of the attendants contracted the disease outside the institution and spread it to the other, as they were both employed in the same building, also where the patient just mentioned was housed.

In regard to the age as being a factor in susceptible cases, we found the percentage was practically the same for both adults and children, the lowest percentage in any one building housing adults being 7 per cent to that of 29.2 per cent in a department comprising rather a mixed group, but chiefly children and young adults, where most of the cases developed diphtheria during the recent epidemic. In cottages housing young children, the proportion was almost identical with that of the other wards of adults past middle age, the percentage being 19.8 per cent in the younger element against 19 per cent in the older. We were rather surprised to find such a condition, for we were always under the impression that children were much more susceptible than adults.

In conclusion, I can not lay too much stress on the use of toxin-antitoxin in any institution, for our experience has taught us that it is not only so much more economical from every point of view, but that it protects each and every individual against diphtheria and prevents future epidemics and conserves human lives.

APPENDIX

STATISTICS OF STATE HOSPITALS AND SONOMA STATE HOME

Stockton, Napa and Southern California State Hospitals each have a local dentist, who devotes his entire time to the care of the patients of his respective hospital; Mendocino State Hospital and Sonoma State Home are served by a dentist who divides his time between the two institutions; Whittier State School, California School for Girls and Norwalk State Hospital have a dentist who divides his time among the three. In addition to the above, Agnews State Hospital and Preston School of Industry furnished dental service to the inmates of those institutions, the same being performed by an outside dentist.

BIENNIAL REPORT

OF THE

SURVEYOR GENERAL

OF THE

STATE OF CALIFORNIA

FOR THE TERM ENDING AUGUST 1, 1924

CALIFORNIA STATE PRINTING OFFICE
FRANK J. SMITH, Superintendent
SACRAMENTO, 1924

BIENNIAL REPORT OF THE SURVEYOR GENERAL.

STATE OF CALIFORNIA,
OFFICE OF THE SURVEYOR GENERAL.
SACRAMENTO, September 29, 1924.

*To His Excellency, F. W. RICHARDSON,
Governor of the State of California.*

SIR: I have the honor to herewith submit a report covering the work of this office for the term ending August 1, 1924.

DURING THE PAST BIENNIUM:

Fees and royalties amounting to \$12,847 were collected by the Surveyor General and Register of the State Land Office, as provided by sections 501 and 3574 of the Political Code and chapter 303, Statutes of California, 1921, and paid into the state treasury and placed to the credit of the general fund.

56,939 acres of state school lands were leased for a rental of \$8,010 under the provisions of chapter 493, Statutes of California, 1917, recommended by me, 94 leases being executed. Prior to that date, no revenue was received through the rental of school lands.

20,789 acres of lieu school lands were sold through the sale of scrip purchased under the provisions of section 3408*d* of the Political Code for the sum of \$137,456, an average of \$6.61 per acre. Prior to the enactment of section 3408*d*, recommended by me, the state received \$1.25 an acre.

Public auction sales of school land were held under the provisions of chapter 207, Statutes of California, 1919, in the counties of Shasta, Riverside, San Bernardino, San Diego, Imperial, Yolo, Solano, Napa, Sonoma, Lassen, Modoc, Del Norte, Humboldt, Mendocino, Sierra, Nevada, Plumas and Alpine, 67,324 acres being sold for \$202,807, an average of \$3.01 an acre. Prior to the enactment of legislation recommended by me, the state received \$1.25 an acre for such land.

40 acres of state school land were sold under the provisions of chapter 208, Statutes of California, 1919, for \$10,000, being \$250 an acre, and 197 acres were sold for \$985, being \$5 an acre. Prior to the enactment of legislation recommended by me, the state received \$1.25 an acre.

251.21 acres of sovereign lands in the bed of Clear Lake were sold under the provisions of chapter 142, Statutes of California, 1923, for \$7,536.30, being \$30 an acre. Prior to the enactment of chapter 142, recommended by me, the state received \$2.50 an acre.

669 applications to purchase 93,480 acres of state lands were filed.

1392 reports of county treasurers, made under the provisions of section 3422 of the Political Code, showing the receipt of \$155,686 paid for state lands, were received and entered on the records of this office, as provided in section 3423 of the Political Code.

3451 acres of lake lands were leased for a rental of \$8,628 under the provisions of chapter 612, Statutes of California, 1911, recommended by me, 11 leases being executed. Prior to that date, the state received no revenue from that class of lands.

4730 acres of submerged lands were leased under the provisions of chapter 829, Statutes of California, 1921, for a rental of \$946, one lease being executed.

56 lists and patents conveying 62,080 acres of land from the United States to the state were recorded in this office, as provided in section 3405 of the Political Code.

621 certificates of purchase for 89,114 acres of state lands were issued under the provisions of section 3514 of the Political Code.

481 patents for 72,295 acres of state lands were issued under the provisions of section 3519 of the Political Code.

165 land surveyors' licenses were issued under the provisions of chapter 247, Statutes of California, 1907.

County registrars of land titles in sixteen counties in the state operating under "An act to amend an act entitled 'An act for the certification of land titles and the simplification of the transfer of real estate,' approved March 17, 1897," Statutes of California, 1915, page 1932, reported to this office the number of registrations and of certificates of title issued, which reports were embodied in reports made by this office under the provisions of chapter 800, Statutes of California, 1917.

49 duplicate certificates of purchase were issued under the provisions of section 3518 of the Political Code.

95 certificates of status of state lands, 164 certified copies of records and 23 certified copies of records of patents were issued.

230 indemnity state selections were made under the provisions of section 3398 of the Political Code.

141 certified lists of lands sold by the state were issued under the provisions of section 3659 of the Political Code.

65 statements of delinquencies were issued as provided by section 3546 of the Political Code.

Surveys, maps and tablings made under the provisions of chapter 612, Statutes of California, 1911, amounting to 10 in number, were checked.

Surveys, maps and tablings made under the provisions of chapter 490, Statutes of California, 1915, amounting to 2 in number, were checked.

Surveys of 65 camp sites in section 16, T. 1 N., R. 10 W., S. B. M., were made for the purpose of leasing under the provisions of chapter 493, Statutes of California, 1917.

An extensive study of the prevalence of oil upon the beaches along the coast of California was made, as provided by Assembly Concurrent Resolution No. 23, chapter 82, Statutes of California, 1923, and a report is in course of preparation.

An investigation to determine what public lands of the State of California in national forests are more valuable for timber than for any other purpose and subject to exchange for United States lands, as provided in chapter 229, Statutes of California, 1923, has been made and the acreage is estimated at 50,000.

The lands are scattered in 22 counties and an exchange thereof for United States lands in a compact body, as permitted by an act of congress of March 20, 1922 (Public No. 173), would result in a gain to the state of at least \$250,000, the reason therefor being that the state lands being scattered, have not the value that the same number of acres in a compact body would have.

The scattered state lands would have as great a value to the United States as the United States lands exchanged, for the reason that the United States could consolidate the scattered state lands with the United States lands thereby making a compact body of United States lands.

The cost of making the exchange is estimated at \$25,000, the United States requiring the state to advertise the state lands together with the United States lands in the counties in which the lands are located, also requiring the state to furnish abstracts of title covering the 50,000 acres, and requiring the state to pay \$624 fees.

If the provisions of chapter 229 are to be carried out, provisions for the expense must be made.

Ten thousand letters have been written during the two years.

Classification of 556,527 acres of state land was made under the provisions of chapter 303, Statutes of California, 1921.

24 lists of persons licensed as land surveyors were transmitted to each of the 58 county recorders in the state as provided by section 4 of chapter 247, Statutes of California, 1907, a total of 1392 lists being transmitted.

Tabulated statements follow:

GENERAL OFFICE BUSINESS.

Amount of fees and royalties collected by Surveyor General and Register of the State Land Office from August 1, 1922, to August 1, 1924, and paid into the state treasury, to the credit of the general fund, or to the Secretary of State.

| Month | Paid into State Treasury | Paid to Secretary of State |
|--------------------|--------------------------------|----------------------------------|
| 1922—August | \$184 00 | \$9 00 |
| September | 362 50 | 71 00 |

| Alpine..... | July 29, 1924 | 594 | 1,989 00 |
| Totals..... | | 67,324 | \$202,807 00 |

SALES OF SCHOOL LANDS TO ACTUAL SETTLERS.

State school lands were sold to actual settlers under the provisions of chapter 208, Statutes of California, 1919, as follows:

| County | Date | Acres | Amount |
|----------------------|---------------|--------|-------------|
| Mendocino | Feb. 5, 1923 | 197.60 | \$988.00 |
| San Bernardino | Dec. 24, 1923 | 40.00 | 10,000.00 |
| Totals | | 237.60 | \$10,988.00 |

SALES OF SOVEREIGN LANDS.

State sovereign lands were sold under the provisions of chapter 142, Statutes of California, 1923, as follows:

| County | Date | Acres | Amount |
|--------------|------|--------|------------|
| Lake | 1923 | 41.04 | \$1,231.20 |
| Lake | 1921 | 210.17 | 6,305.10 |
| Totals | | 251.21 | \$7,536.30 |

APPLICATIONS TO PURCHASE STATE LANDS.

From August 1, 1922, to August 1, 1924, applications to purchase state lands were received and filed as follows:

| School lands, lake lands, swamp and overflowed lands and sovereign lands | Number of applications | Acres |
|--|------------------------|-----------|
| Eureka Land District, school lands | 17 | 2,717.49 |
| Imperial Land District, school lands | 95 | 10,851.58 |
| Independence Land District, school lands | 46 | 10,045.94 |
| Los Angeles Land District, school lands | 291 | 32,254.38 |
| Sacramento Land District, school lands | 55 | 6,658.73 |
| San Francisco Land District, school lands | 72 | 7,370.20 |
| Susanville Land District, school lands | 68 | 21,514.52 |
| Visalia Land District, school lands | 8 | 760.62 |
| Lake lands | 1 | 19.44 |
| Swamp and overflowed lands | 9 | 1,035.85 |
| Sovereign lands | 7 | 251.21 |
| Totals | 669 | 93,479.96 |

STATE LAND PAYMENTS.

Amounts of principal, interest and penalties received for the state by the county treasurers, on account of sales of school and sovereign lands, from August 1, 1922, to August 1, 1924.

| Counties | Principal | Interest | Total | Penalties |
|-----------------|-------------|-------------|--------------|------------|
| Alameda | | | | |
| Alpine | \$178 90 | \$386 16 | \$865 06 | |

| Totals | \$86,090 59 | \$66,758 17 | \$152,848 76 | \$2,837 23 |

Amount of annual rentals received for the leasing of state lands pursuant to the provisions of chapter 612, Statutes of California, 1911, from August 1, 1922, to August 1, 1924, and paid into the state treasury to the credit of the school land fund by the lessees was \$8,628.42.

Amount of annual rentals received for the leasing of state lands pursuant to the provisions of chapter 829, Statutes of California, 1921, from August 1, 1922, to August 1, 1924, and paid into the state treasury to the credit of the general fund by the lessees was \$946.

LEASING OF STATE LANDS.

The number of acres of state lands which are under lease from the State of California is as follows:

| | |
|--|-----------|
| State lands leased pursuant to the provisions of chapter 612, Statutes of California, 1911 | Acres |
| State lands leased pursuant to the provisions of chapter 493, Statutes of California, 1917 | 3,451.00 |
| State lands leased pursuant to the provisions of chapter 829, Statutes of California, 1921 | 56,938.93 |
| Total | 4,730.00 |
| | 65,119.93 |

LANDS LISTED TO THE STATE.

From August 1, 1922, to August 1, 1924, lands were listed to the State of California by the United States, as follows:

| | |
|----------------------------|-----------|
| Grant— | Acres |
| Indemnity or lieu lands | 35,340.48 |
| Swamp and overflowed lands | 26,739.62 |
| Total | 62,080.10 |

CERTIFICATES OF PURCHASE ISSUED.

(From August 1, 1922, to August 1, 1924.)

| Grant | Number of certificates | Acres |
|---|------------------------|-----------|
| Sixteenth and thirty-sixth sections and indemnity or lieu lands | 605 | 87,453.42 |
| Swamp and overflowed lands | 8 | 1,389.76 |
| Lake lands | 1 | 19.44 |
| Sovereign lands | 7 | 251.21 |
| Totals | 621 | 89,113.83 |

PATENTS ISSUED.

(From August 1, 1922, to August 1, 1924.)

| | Number of patents | Acres |
|---|-------------------|-----------|
| Sixteenth and thirty-sixth sections and indemnity or lieu lands | 469 | 71,383.58 |
| Swamp and overflowed lands | 9 | 455.54 |
| Lake lands | 3 | 456.80 |
| Totals | 481 | 72,295.92 |

LAND SURVEYORS LICENSED.

Licenses issued to land surveyors from August 1, 1922, to August 1, 1924, numbered 165.

LAND TITLE LAW.

Pursuant to the provisions of chapter 800, Statutes of California, 1917, I beg to report that on August 1, 1923, certificates of title had been issued pursuant to the registration of land titles under "The Torrens Law" in sixteen of the fifty-eight counties of the State of California, the registrars of the sixteen counties having registrations reporting as follows:

Alameda County.

94 certificates, which includes all transfers, issued up to August 1, 1923.

Fresno County.

2 certificates issued up to August 1, 1923.

Humboldt County.

163 certificates issued up to August 1, 1923.

Imperial County.

230 certificates issued up to August 1, 1923.

Kern County.

30 certificates issued up to August 1, 1923.

Los Angeles County.

22,519 certificates issued up to August 1, 1923.

Orange County.

2,765 certificates issued up to August 1, 1923.

Riverside County.

117 certificates issued up to August 1, 1923.

San Bernardino County.

970 certificates issued up to August 1, 1923.

San Diego County.

1,954 certificates issued up to August 1, 1923.

San Francisco County.

8 certificates issued up to August 1, 1923.

Santa Barbara County.

102 certificates issued up to August 1, 1923.

Santa Cruz County.

9 certificates issued up to August 1, 1923.

Sonoma County.

196 certificates issued up to August 1, 1923.

Tulare County.

36 certificates issued up to August 1, 1923.

Ventura County.

1 certificate issued up to August 1, 1923.

The Torrens act provides that upon the original registration of any land, a sum equal to one-tenth of one per cent of the assessed value of the land including permanent improvements thereon as the same were valued for county taxation the last time said land and permanent improvements or either thereof were assessed for county taxes next preceding the filing of the petition shall be collected by the registrar and paid to the State Treasurer to be credited to the "Torrens Title Assurance Fund." The books of the State Treasurer show that on August 1, 1923, the "Torrens Title Assurance Fund" contained State of California Harbor Improvement 4 per cent bonds having a face value of \$23,000, which were purchased for the benefit of said fund, for the sum of \$22,255.19, and that the amount of cash in said fund on August 1, 1923, was \$258.70.

LAND TITLE LAW.

Pursuant to the provisions of chapter 800, Statutes of California, 1917, I beg to report that the registrars of titles under "The Torrens Law" in the sixteen counties of the state in which registrations of land have been made up to August 1, 1924, advised me as follows:

Alameda County.

Relative to the total number of registrations or certificates of title issued, will advise that there were no new certificates issued—only transfers during 1924.

In 1923 the registrar reported 94 certificates issued, including all transfers, up to August 1 1923.

Fresno County.

The registrar of Fresno County made no report this year but in 1923 he reported that two certificates were issued up to August 1, 1923.

Humboldt County.

"The total number of Torrens certificates of title issued up to August 1, 1924, is 182."

Imperial County.

"Our total number of Torrens certificates up to August 1, 1924, is 244."

Kern County.

We have four registrations Torrens Act and this office has issued 43 certificates to August 1, 1924.

Los Angeles County.

The total number of certificates issued under the Land Registration Act (Torrens) up to August 1, 1924, was 28,853 and the total number of documents filed for record in said department from August 1, 1923, to August 1, 1924, was 19,217.

Orange County.

905 parcels of land have been registered under the Land Title Law of California in this county; and 3496 certificates of title issued up to August 1, 1924.

Riverside County.

"The total number of certificates issued in this county up to August 1, 1924, are 139, and no new decrees issued since February 6, 1923, and as the number of said certificates was 110 you will see that we have only issued 29 continuation-certificates since that date."

San Bernardino County.

The total number of registrations under the Registered Land Title Law, up to August 1st, is 475.

San Diego County.

The total number of certificates of title issued up to August 1, 1924, is 2187.

San Francisco County.

During the entire life of the Torrens Act there have been filed in this department but five original decrees. Nine certificates of title have been issued.

Santa Barbara County.

"We have 176 certificates of title to date."

Santa Cruz County.

There has been one registration under the Torrens system in our office and we have issued ten certificates of title.

Sonoma County.

Up to August 1, 1924, there had been 219 certificates of title issued, 230 documents filed and no new registrations, leaving the total separate parcels of land registered as 84.

Tulare County.

"Total number of certificates issued 38."

Ventura County.

The registrar of Ventura County made no report this year but in 1923 he reported that one certificate was issued up to August 1, 1923.

The Torrens act provides that upon the original registration of any land, a sum equal to one-tenth of one per cent of the assessed value of the land including permanent improvements thereon as the same were valued for county taxation the last time said land and permanent improvements or either thereof were assessed for county taxes next preceding the filing of the petition shall be collected by the registrar and paid to the State Treasurer to be credited to the "Torrens Title Assurance Fund." The books of the State Treasurer show that on August 1, 1924, the "Torrens Title Assurance Fund" contained State of California Harbor Improvement 4 per cent bonds having a face value of \$23,000, which were purchased for the benefit of said fund, for the sum of \$22,255.19, and that the amount of cash in said fund on August 1, 1924, was \$1,605.56.

Respectfully submitted.

W. S. KINGSBURY,
Surveyor General.

LAWS GOVERNING THE SALE OF SCHOOL
LANDS, AND THE LEASING OF LANDS,
OF THE STATE OF CALIFORNIA

Together with Rules, Regulations and Information
Concerning Same

And

LIST OF THE VACANT SCHOOL LANDS ON SEPTEMBER 29, 1924.

LAW GOVERNING THE SALE OF SCHOOL LAND UNSUITABLE FOR CULTIVATION.

CHAPTER 207.

An act to amend an act entitled "An act providing for the sale of certain state lands," approved May 19, 1915, by extending the provisions thereof to certain lands heretofore reserved from sale, and by providing for the sale or exchange of such lands.

[Approved May 6, 1919.]

The people of the State of California do enact as follows:

SECTION 1. An act entitled "An act providing for the sale of certain state lands," approved May 19, 1915, is hereby amended to read as follows:

Section 1. The unsold portions of the sixteenth and thirty-sixth sections of school lands not included within the exterior boundaries of national reservations, the unsold portions of the five hundred thousand acres granted to the state for school purposes, and the unsold portions of the listed lands selected of the United States in lieu of the sixteenth and thirty-sixth sections and losses to the school grant which are not suitable for cultivation shall be sold at public auction to citizens of the United States by the surveyor general under rules and regulations prescribed by him, payment to be made as follows: The full purchase price of the land, or ten per cent thereof and interest to the first day of January following at the rate of six per cent per annum on the unpaid balance of the purchase price, to be paid at the time of sale; the unpaid balance of the purchase price shall bear interest at the rate of six per cent per annum, payable in advance on the first day of each year, at which time the purchaser may pay as many one-tenths of the purchase price as he may desire; *provided*, that the legislature may require the payment of the unpaid balance of the purchase price within five years after the passage of an act requiring such payment. All payments to be made to the county treasurer of the county in which the land is situated.

SEC. 2. From and after the date upon which this act takes effect, the surveyor general may sell in like manner and upon like conditions as to payment and interest any of the lands heretofore reserved from sale by the provisions of section three thousand four hundred eight *b* of the Political Code which have not been used as bases for indemnity selections, as provided in section three thousand four hundred six *a* of said code, or otherwise disposed of under any law of this state; *provided, however*, lands which in his judgment contain growth valuable for forest-cover protection to watersheds, or are valuable for reservoir sites, shall not be sold or exchanged under the provisions of this act.

Whenever he shall deem it to the advantage of the state so to do, he may, with the concurrence of the state board of control, exchange for lands of the United States of equal area, pursuant to law, any of said reserved lands in place, and the lands so acquired in exchange may be thereafter sold in the same manner and upon like conditions as to payment and interest as hereinabove set forth. Nothing herein contained shall be construed to affect the right of the surveyor general to use as bases for indemnity scrip, as provided in sections three thousand four hundred six *a*, three thousand four hundred eight *b*, three thousand

four hundred eight *c*, and three thousand four hundred eight *d* of the Political Code, any of said reserved lands not otherwise disposed of under the provisions of this act.

SEC. 3. Whenever any person shall make actual settlement, in good faith, upon any such land, with intent to purchase the same pursuant to the provisions of an act entitled "An act providing for the sale of certain state lands suitable for cultivation," approved May 19, 1915, and the surveyor general shall, thereafter, upon an examination of such lands, determine it to be unsuitable for cultivation, he may, with the concurrence of the state board of control, fix a price at which such land may be sold to such actual settler, as provided in the act last named, and such actual settler shall have the right to purchase such land, at the price so fixed, at any time within a period of six months thereafter. The purchase price of all timber lands shall be paid in full at the time of sale.

SEC. 4. In any and all notices of public sale, the surveyor general shall reserve the right to reject any and all bids.

SEC. 5. When the full purchase price has been paid the purchaser shall be entitled to a patent for the land.

SEC. 6. Those parts of all acts in conflict with this act are hereby repealed.

LAW GOVERNING THE SALE OF SCHOOL LAND SUITABLE FOR CULTIVATION.

CHAPTER 208.

An act to amend an act entitled "An act providing for the sale of certain state lands suitable for cultivation," approved May 19, 1915.

[Approved May 6, 1919.]

The people of the State of California do enact as follows:

SECTION 1. An act entitled "An act providing for the sale of certain state lands suitable for cultivation," approved May 19, 1915, is hereby amended to read as follows:

Section 1. The unsold portions of the sixteenth and thirty-sixth sections of school lands not included within the exterior boundaries of national reservations, the unsold portions of the five hundred thousand acres granted to the state for school purposes, and the unsold portions of the listed lands selected of the United States in lieu of the sixteenth and thirty-sixth sections and losses to the school grant, which are suitable for cultivation shall be sold to actual settlers in quantities not exceeding three hundred twenty acres to any one person under the provisions of section three thousand four hundred ninety-five of the Political Code, at a price to be fixed by the state board of control and the state surveyor general, payment to be made as follows: The full purchase price of the land, or ten per cent thereof and interest to the first day of January following, at the rate of six per cent per annum on the unpaid balance of the purchase price; the unpaid balance of the purchase price shall bear interest at the rate of six per cent per annum, payable in advance on the first day of each year, at which time the purchaser may pay as many one-tenths of the purchase price as he may desire; *provided*, that the legislature may require the payment of the unpaid balance of the purchase price within five years after the passage of an act requiring such payment.

Sec. 2. Actual settlers, within the meaning of this act, are persons who have resided in good faith on the land for a period of not less than one year, to the exclusion of any other residence or fixed place of habitation during such time.

Sec. 3. Any person who shall in good faith settle upon any land in the belief that the same was suitable for cultivation shall, in the event the surveyor general, upon inspection, determines said land to be unsuitable for cultivation, be a preferred purchaser for a period of six months from the date of such decision; *provided*, that in cases where the surveyor general has heretofore decided that lands settled upon were unsuitable for cultivation said settlers shall be preferred purchasers for a period of six months from the date that this act takes effect.

LAW GOVERNING THE LEASING OF SCHOOL LANDS FOR AGRICULTURAL, GRAZING AND RECREATIONAL PURPOSES.

CHAPTER 493.

An act providing for the leasing of certain state lands and making an appropriation for the purposes of this act.

[Approved May 17, 1917.]

(Effective July 27, 1917.)

The people of the State of California do enact as follows:

SECTION 1. Any person, firm or corporation desiring to lease any of the unsold portions of the sixteenth and thirty-sixth sections of school lands and the unsold portion of the listed lands selected from the public lands of the United States in lieu of the sixteenth and thirty-sixth sections and losses to the school grant must make application therefor to the surveyor general of the state, describing the lands sought to be leased by legal subdivisions. The application must be accompanied by the filing fee of five dollars. All applications to lease lands under this act shall be approved or rejected by the surveyor general within ninety days after the receipt thereof.

SEC. 2. Upon receipt of an application to lease any of the lands under this act the surveyor general shall appraise such lands and fix the annual rental per acre therefor; such charge to be approved by the state board of control.

SEC. 3. Whenever any lease is delivered to the applicant by the surveyor general the lessee shall within fifteen days thereafter, execute and return such lease to the state surveyor general and make payment of the first annual rental. The surveyor general shall receive the money and give a receipt therefor. All subsequent annual payments of rental must be paid to the state surveyor general in like manner fifteen days after they become due. In case payments are not made as herein provided, the lease and all rights thereunder shall cease and terminate.

SEC. 4. No lease shall be for a period longer than ten years, and such lease shall terminate upon the sale of said lands, or any portion thereof, by the state and the lessee shall be notified by registered mail by the state surveyor general upon the sale of said land at public auction to the highest bidder as provided in that certain act entitled "An act providing for the sale of certain state lands," approved May 19, 1915. The date of the termination of the lease shall be on the date the certificate of purchase is issued to the purchaser of the land from the State of California by the register of the state land office, except when a lease embraces land suitable for cultivation and an application from an actual settler to purchase said land is received and filed by the surveyor general, then the lease shall terminate on the date said application is filed of record in the surveyor general's office and the lessee is to be notified by registered mail of the filing of said application to purchase said land, or any portion thereof, from the state and of the termination of the lease. Possession under any lease hereby authorized shall not be held, deemed or construed to be adverse to that of any person who becomes an actual settler upon any portion of land in such lease described, with intent to purchase the same in the manner provided by law.

SEC. 5. Any lease for sixteenth and thirty-sixth sections or any portion thereof which may now or may hereafter be included within the exterior boundaries of a national reservation or of a reserve, or within the exterior boundaries of lands withdrawn from public entry, shall terminate whenever the State of California shall designate said lands as bases for indemnity selections as provided by law. The lessee is to be notified by the surveyor general by registered mail whenever the State of California designates the land as bases for indemnity selection or selections.

SEC. 6. If a lease is terminated by reason of the filing of an application to purchase land suitable for cultivation, or by the sale of land at public auction, or by the designation of land as bases for indemnity selection or selections, the lessee shall surrender the lease to the surveyor general and receive in exchange therefor from the surveyor general a certificate showing the proportionate amount of the annual payment to be refunded to the lessee, for the tract or tracts of land that have been disposed of by the State of California, and the state controller, upon the surrender to him of the said surveyor general's certificate, with the approval of the board of control endorsed thereon, shall issue to the lessee a warrant for the said amount payable out of the state school land fund and the state treasurer shall pay the same. If all the tracts of land described in said surrendered lease have not been disposed of by the state, the lessee shall be entitled, without the payment of any additional fee, to a new lease for the remaining tracts of land for the balance of the unexpired term of the surrendered lease, at the same annual rental per acre.

SEC. 7. The surveyor general is hereby authorized to prepare, make, execute and deliver all papers, instruments, and documents and to do any and all things necessary to carry out the provisions of this act.

SEC. 8. All moneys received as rental for such lands above mentioned shall be paid into the state school land fund.

SEC. 9. There is hereby appropriated out of any moneys in the state treasury to the credit of the state school land fund, not otherwise appropriated, the sum of three thousand dollars, or so much thereof as may be necessary, to be used in refunding unearned rentals under the provisions of section six of this act.

LAW GOVERNING THE GRANTING OF PERMITS AND LEASES TO PROSPECT FOR AND TAKE MINERALS FROM STATE LANDS.**CHAPTER 303.**

An act to reserve all minerals in state lands; to provide for examination, classification and report on the mineral and other character of state lands; to provide for the granting of permits and leases to prospect for and take any such minerals; to provide for the rents and royalties to be paid, and granting certain preference rights; to provide for the making of rules, regulations and contracts necessary to carry out the purposes of this act; and repealing acts or parts of acts in conflict herewith; providing for an appropriation to defray the cost of administering this act.

[Approved May 26, 1921.]

The people of the State of California do enact as follows:

SECTION 1. All coal, oil, oil shale, gas, phosphate, sodium, and other mineral deposits in lands belonging to the state, or which may become the property of the state, are hereby reserved to the state; *provided, however*, that nothing in this act shall apply to lands acquired by the state on a sale of delinquent taxes, except such land, the deed for which is required to be filed in the surveyor general's office. Such deposits are reserved from sale except upon a rental and royalty basis, as herein provided for; and a purchaser of any lands belonging to the state, or which may become the property of the state, shall acquire no right, title or interest in or to, such deposits except as hereinafter expressly provided; and the right of such purchaser shall be subject to the reservation of all coal, oil, oil shale, gas, phosphate, sodium, and other mineral deposits, and to the conditions and limitations prescribed by law providing for the state and persons authorized by it to prospect for, mine, and remove such deposits, and to occupy and use so much of the surface of said land as may be required for all purposes reasonably extending to the mining and removal of such deposits therefrom.

SEC. 2. All applications to purchase state lands which may be filed subsequent to the passage of this act, and all sales shall be subject to and contain a reservation to the state of one-sixteenth of all coal, oil, gas, and other mineral deposits in all land so acquired, as hereinafter provided for, and all certificates of purchase and patents issued therefor, shall contain such reservation.

SEC. 3. The surveyor general may from time to time classify any or all state land for its different possible values and uses, and, when he deems it advisable, may require the state mineralogist, director of agriculture or other organization, agency or institution of the state government to make such classification. It is hereby expressly made the duty of any such officer, organization, agency or institution to make such classification and to render a report thereon upon the application of the surveyor general.

SEC. 4. The surveyor general is hereby authorized, upon the payment to him of fifty cents per acre, for each acre in area embraced within the boundaries of the lands proposed to be prospected and under such rules and regulations as he may prescribe, to grant to any person or association of persons, who are residents of the State of California

and citizens of the United States or who have declared their intention of becoming such, or corporations ninety per cent of whose stockholders are citizens of the United States a prospecting permit, which shall give the exclusive right, for a period not exceeding two years, to prospect for oil or gas, upon not exceeding six hundred forty acres of land wherein such deposits of oil or gas belong to the state and are not within any known geological structure of a producing oil or gas field, upon condition that the permittee shall begin drilling operations within six months from the date of the permit, and shall within one year from and after the date of the permit, drill one or more wells for oil or gas to a depth of not less than one thousand feet each, unless valuable deposits of oil or gas shall be sooner discovered, and shall, within two years from date of the permit, drill for oil or gas to an aggregate depth of not less than two thousand feet unless valuable deposits of oil or gas shall be sooner discovered. The surveyor general may, if he shall find that the permittee has been unable with the exercise of diligence to test the land in the time granted by the permit, extend any such permit for such time, not exceeding two years, and upon such conditions as he shall prescribe. Whether the lands sought in any such application and permit are surveyed or unsurveyed the applicant shall, prior to filing his application for permit, locate such land in a reasonably compact form and according to the legal subdivisions of the public land surveys if the land be surveyed; and in an approximately square or rectangular tract, if the land be an unsurveyed tract, the length of which shall not exceed two and one-half times its width: the land to be surveyed by the surveyor general at the expense of the applicant for the permit in such form as the surveyor general shall deem to be to the best interest of the state: *provided, however*, that in case of prospecting permits and leases to river beds, lake beds, overflowed, tide and submerged lands, the width or length of the prospecting permit or lease along the shore line, measured on an east and west or north and south line, shall not exceed one-quarter mile. If the applicant shall cause to be erected upon the land for which a permit is sought a monument not less than four feet high, at some conspicuous place thereon, and shall post a notice in writing on or near said monument, stating that an application for permit will be made within thirty days after the date of posting said notice, giving the name of the applicant, the date of the notice, and such a general description of the land to be covered by such permit by reference to courses and distances from such monument and such other natural objects and permanent monument as will reasonably identify the land, stating the amount thereof in acres, he shall during the period of thirty days following such marking and posting, be entitled to a preference right over others to a permit for the land so identified: *provided, however*, that applicant shall, as a part of his application for a permit, show that within two days after the posting of the said notice, he recorded a copy of the same in the county recorder's office of the county in which the said land is situated. The applicant shall, within ninety days after receiving a permit, mark each of the corners of the tract described in the permit upon the ground with substantial monuments, so that the boundaries can be readily traced on the ground, and shall post in a conspicuous place upon the lands a notice that such permit has been granted and a description of the lands covered thereby: *provided, however*, that where the boun-

daries of the land sought to be prospected or developed under lease are wholly or partially in river or lake beds, overflowed, tide and submerged lands, the notice shall be conspicuously posted on a monument as close to a corner of the land as possible and shall specifically describe the area to be developed by courses and distances so that the limits of the area can be easily determined; *provided further, however*, that in no case shall permits or leases be granted covering tide, overflowed or submerged lands fronting on an incorporated city, or for a distance of one mile on either side thereof: *provided further, however*, that in case of an application for a permit or a lease covering tide, overflowed or submerged land by anyone other than the littoral or riparian proprietor, said littoral or riparian proprietor shall have six months within which to file an application for a permit or lease, but if said littoral or riparian proprietor fails to comply with the requirements of this act and its rules and regulations made in pursuance hereof, his preferential rights shall thereupon cease and forever be terminated, and the original applicant shall be permitted to proceed with his application.

SEC. 5. Upon establishing to the satisfaction of the surveyor general that valuable deposits of oil or gas have been discovered within the limits of the land embraced in any permit, the permittee shall be entitled to a lease for one-fourth of the land embraced in the prospecting permit; *provided*, that the permittee shall be granted a lease for as much as one hundred sixty acres of said lands, if there be that number of acres within the permit. The area to be selected by the permittee shall be in compact form and if surveyed, to be described by the legal subdivision of the public land surveys; if unsurveyed, to be surveyed by the surveyor general at the expense of the applicant for lease in accordance with rules and regulations to be prescribed by the surveyor general, and the lands leased shall be conformed to and taken in accordance with the legal subdivisions of such surveys; deposits made to cover expense of survey shall be deemed appropriated for that purpose, and any excess deposit may be repaid to the person or persons making such deposits or their legal representative. Such lease shall be for a term of twenty years upon a royalty of five per centum in amount or value of the production and the annual payment in advance of a rental of one dollar per acre, the rental paid for any one year to be credited against the royalties as they accrue for that year, with the right of renewal as prescribed in section eight hereof. The permittee shall also be entitled to a preference right to a lease for the remainder of the land in his prospecting permit at a royalty of not less than twelve and one-half per centum in amount or value of the production, and under such other conditions as are fixed for oil or gas leases in this act, the bonus and royalty to be determined by competitive bidding or fixed by such other method as the surveyor general may by regulations prescribe; *provided*, that the surveyor general shall have the right to reject any and all bids.

SEC. 6. Until the permittee shall apply for lease to the one quarter of the permit area heretofore provided for he shall pay to the State of California twenty per centum of the gross value of all oil or gas secured by him from the lands embraced within his permit and sold or otherwise disposed of, or held by him for sale or other disposition.

SEC. 7. All permits and leases of lands containing oil or gas, made or issued under the provisions of this act, shall be subject to the condi-

tion that no wells shall be drilled within two hundred feet of any of the outer boundaries of the lands so permitted or leased, unless the adjoining lands have been patented or the title thereto otherwise vested in private owners, and to the further condition that the permittee or lessee will, in conducting his explorations and mining operations, use all reasonable precautions to prevent waste of oil or gas developed in the land, or the entrance of water through wells drilled by him to the oil sands or oil bearing strata, to the destruction or injury of the oil deposits. Violations of the provisions of this section shall constitute grounds for the forfeiture of the permit or lease, to be enforced through appropriate proceedings in courts of competent jurisdiction.

SEC. 8. All unappropriated deposits of oil or gas situated within the known geologic structure of a producing oil or gas field and the unentered lands containing the same not subject to preferential lease, may be leased by the surveyor general to the highest responsible bidder by competitive bidding under general regulations to qualified applicants in areas not exceeding six hundred forty acres and in tracts which shall not exceed in length two and one-half times the width, the surveyed land to be leased according to legal subdivisions, the unsurveyed land to be surveyed by the surveyor general, at the expense of the lessee, in such form as the surveyor general shall deem to be to the best interest of the state; *provided, however*, that in case of leases to river bed, lake bed, overflowed, tide and submerged lands, the width or length of the lease along the shore line, measured on an east and west or north and south line, shall not exceed one-quarter mile, such leases to be conditioned upon the payment by the lessee of such bonus as may be accepted and of such royalty as may be fixed in the lease, which shall not be less than twelve and one-half per centum in amount or value of the production, and the payment in advance of a rental of not less than one dollar per acre per annum thereafter during the continuance of the lease, the rental paid for any one year to be credited against the royalties as they accrue for that year. Leases shall be for a period of twenty years, with the preferential right in the lessee to renew the same for successive periods of ten years upon such reasonable terms and conditions as may be prescribed by the surveyor general, unless otherwise provided by law at the time of the expiration of such periods.

Whenever the average daily production of any oil well shall not exceed ten barrels per day, the surveyor general is authorized to reduce the royalty on future production when in his judgment the wells can not be successfully operated upon the royalty fixed in the lease. The provisions of this paragraph shall apply to all oil and gas leases made under this act.

SEC. 9. The right to prospect, and lease lands containing any other minerals shall be acquired in a similar manner as the right to prospect for and develop oil and gas, under such reasonable and proper rules and regulations, as the surveyor general shall from time to time prescribe.

SEC. 10. For the purpose, however, of promoting the sale of state land, and the more active cooperation of the owner of the soil, and to facilitate the development of its mineral resources the state hereby constitutes the purchaser of the soil, its agent for the purposes herein named and in consideration hereof, relinquishes to and vests in the purchaser of state lands an undivided fifteen-sixteenths of all oil

and gas and the value of the same that may be upon or within any state land purchased after the passage of this act. The purchaser of the soil is hereby authorized to sell or lease to any person, firm or corporation the oil and gas and other minerals that may be thereon or therein upon such terms and conditions as such purchaser and owner may deem best, subject, however, to the provisions of this act and the reservations herein contained; *and provided, further*, that the lessee or purchaser shall in every case pay to the state an undivided one-sixteenth of the mineral produced or the value thereof at the well or mine as may be determined by the surveyor general; *provided further, however*, that upon the discovery of oil or gas in paying quantities on adjoining lands the purchaser shall within three months thereafter begin or cause to be started the drilling of a well upon his land, which drilling shall be continuous, as may be provided for by appropriate rules and regulations, prescribed by the surveyor general.

SEC. 11. The surveyor general shall reserve and may exercise the authority to cancel any prospecting permit or lease upon failure by the permittee to exercise due diligence and care in the prosecution of the prospecting work in accordance with the terms and conditions stated in the permit or lease and shall insert in every such permit or lease issued under the provisions of this act appropriate provisions for its cancellation by him.

SEC. 12. No person, association or corporation, shall take or hold, under the terms of this act, more than one oil or gas permit or lease; no corporation shall hold any interest as a stockholder of another corporation in more than one lease and no person or corporation shall take or hold any interest or interests as a member of an association or associations or as a stockholder of a corporation or corporations holding a lease under the provisions hereof, which, together with the area embraced in any direct holding of a lease, under this act, or which, together with any other interest or interests as a member of an association or associations or as a stockholder of a corporation or corporations holding a lease under the provisions hereof, for any kind of mineral leased hereunder, exceeds in the aggregate an amount equivalent to the maximum number of acres of the respective kinds of minerals allowed to any one lessee under this act. Any interest held in violation of this act shall be forfeited to the State of California by appropriate proceedings for that purpose in the superior court for the county in which the property, or some part thereof, is located, except that any ownership or interest forbidden in this act which may be acquired by descent, will, judgment, or decree may be held for two years and not longer after its acquisition; *provided*, that nothing herein contained shall be construed to limit or to prevent any number of lessees under the provisions of this act from combining their several interests so far as may be necessary for the purposes of constructing and carrying on the business of a refinery, or of establishing and constructing as a common carrier a pipe line or lines of railroads to be operated and used by them jointly in the transportation of oil from their several wells, or from the wells of other lessees under this act, or the transportation of coal; *provided, further*, that if any of the lands or deposits leased under the provisions of this act shall be subleased, trusteeed, possessed or controlled by any device permanently, temporarily, directly, indirectly,

tacitly, or in any manner whatsoever, so that they form part of, or are in anywise controlled by any combination in the form of an unlawful trust, with consent of lessee, or form the subject of any contract or conspiracy in restraint of trade in the mining or selling of coal, phosphate, oil, oil shale, gas, or sodium entered into by the lessee, or any agreement or understanding, written, verbal, or otherwise to which such lessee shall be a party, of which his or its output is to be or become the subject, to control the price or prices thereof or of any holding of such lands by any individual, partnership, association, corporation, or control in excess of the amounts of lands provided in this act, the lease thereof shall be forfeited by appropriate court proceedings.

SEC. 13. Rights of way through all state lands are hereby granted for pipe-line purposes for the transportation of oil or natural gas to any applicant possessing the qualifications provided in section four of this act, to the extent of the ground occupied by the said pipe line and twenty-five feet on each side of the same under such regulations as to survey, location, application, and use as may be prescribed by the surveyor general and upon the express condition that such pipe lines shall be constructed, operated, and maintained as common carriers; *provided*, that the surveyor general shall in express terms reserve and shall provide in every lease of oil lands hereunder that the lessee, assignee, or beneficiary, if owner or operator or owner of a controlling interest in any pipe line or of any company operating the same which may be operated accessible to the oil derived from lands under such lease, shall at reasonable rates and without discrimination accept and convey the oil of the state or of any citizen or company not the owner of any pipe line, operating a lease or purchasing gas or oil under the provisions of this act; *provided*, that no right of way shall hereafter be granted over said lands for the transportation of oil or natural gas except under and subject to the provisions, limitations, and conditions of this section. Failure to comply with the provisions of this section or the regulations prescribed by the surveyor general shall be ground for forfeiture of the grant by appropriate proceedings prosecuted in the superior court for the county in which the property, or some part thereof, is located; *and provided, further*, that all the rights and privileges as are now, or as may hereafter be provided by law, respecting the acquisition of rights of ingress, egress and regress over the property of another, by proceedings in eminent domain, are hereby expressly given to a permittee or lessee so that such permittee or lessee may carry on the operations contemplated under the terms of this act.

SEC. 14. Any permit, lease, occupation, or use permitted under this act shall reserve to the surveyor general the right to permit upon such terms as he may determine to be just, for joint or several use, such easements or rights of way, including easements in tunnels upon, through, or in the lands leased, occupied, or used as may be necessary or appropriate to the working of the same or of other lands containing the deposits described in this act, and the treatment and shipment of the products thereof by or under authority of the state, its lessees, or permittees, and for other public purposes; *provided*, that said surveyor general, in his discretion, in making any lease under this act, may reserve to the state the right to lease, sell, or otherwise dispose of the surface of the lands embraced within such lease under existing law or

laws hereafter enacted, in so far as said surface is not necessary for use of the lessee in extracting and removing the deposits therein; *provided, further*, that if such reservation is made it shall be so determined before the offering of such lease; and *provided, further*, that the said surveyor general, during the life of the lease, is authorized to issue such permits for easement herein provided to be reserved.

SEC. 15. No lease issued under the authority of this act shall be assigned or sublet, except with the consent of the surveyor general. The lessee may, in the discretion of the surveyor general, be permitted at any time to make written relinquishment of all rights under such a lease and upon acceptance thereof be thereby relieved of all future obligations under said lease, and may with like consent surrender any legal subdivision of the area included within the lease. Each lease shall contain provisions for the purpose of insuring the exercise of reasonable diligence, skill, and care in the operation of said property; a provision that such rules for the safety and welfare of the miners and for the prevention of undue waste as may be prescribed by said surveyor general shall be observed, including a restriction of the workday to not exceeding eight hours in any one day for underground workers except in cases of emergency; provisions prohibiting the employment of any boy under the age of sixteen or the employment of any girl or woman, without regard to age, in any mine below the surface; provisions securing the workmen complete freedom of purchase; provision requiring the payment of wages at least twice a month in lawful money of the United States, and providing proper rules and regulations to insure the fair and just weighing or measurement of the coal mined by each miner, and such other provisions as he may deem necessary to insure the sale of the production of such leased lands to the public at reasonable prices, for the protection of the interests of the state, for the prevention of monopoly, and for the safeguarding of the public welfare.

SEC. 16. Any permit or lease issued under the provisions of this act may be forfeited and canceled by an appropriate proceeding in the superior court for the county in which the property, or some part thereof is located, whenever the lessee or permittee fails to comply with any of the provisions of the permit or the lease, or of the general regulations promulgated under this act and in force at the date of the lease or permit; and the lease may provide for resort to appropriate methods for the settlement of disputes or for remedies for breach of specified conditions thereof.

SEC. 17. Any person, or association of persons, corporate or otherwise, who enters or has entered upon any land or lands coming under the provisions of this act, and who is holding, or attempting to hold or develop, any such land, is guilty of a trespass, and the claims being exerted are hereby declared to be null and void, and any property placed upon the said land is hereby declared forfeited to the state, and the surveyor general is hereby authorized and empowered to issue a prospector's permit or lease on the said land to any qualified claimant who shall comply with the provisions of this act after it becomes effective; *provided, however*, that the surveyor general may, and he is hereby expressly authorized and empowered to grant a lease, on a royalty of twelve and one-half per centum of the production, to any qualified person, or association of persons, corporate or otherwise, who shall

apply therefor within three months after the passage of this act, and who, at least six months prior to the passage of this act, was operating a producing well or wells, or who was drilling the same, or actually mining for or otherwise developing the mineral products on the said area of lands; *provided, further, however*, that in case of such a lease the area shall be limited to that which is necessary for the operation of the wells or mines, and the surveyor general shall have the right to call for competitive bids for the lease or leases upon the surrounding area of land as hereinbefore provided for.

SEC. 18. The surveyor general of the state is authorized to prescribe necessary and proper rules and regulations and to do any and all things necessary to carry out and accomplish the purposes of this act, also to fix and determine the boundary lines of any structure, or oil or gas field, for the purpose of this act.

SEC. 19. All moneys received by the surveyor general under the provisions of this act from rents, fees, bonuses and royalties accruing from the use of state school land shall be paid into the "school fund," all other moneys received under the provisions of this act shall be deposited in the "general fund."

SEC. 20. For the purposes of administering this act, there is hereby appropriated out of any money in the state treasury, not otherwise appropriated, the sum of ten thousand dollars to be expended by the surveyor general, and the state controller is directed to draw his warrant in favor of the person or persons entitled to the same, upon demand of the surveyor general approved by the board of control, and the state treasurer is directed to pay the same.

SEC. 21. If any section, subsection, sentence, clause or phrase of this act is for any reason held to be unconstitutional, such decision shall not affect the validity of the remaining portions of this act. The legislature hereby declares that it would have passed this act, and each section, subsection, sentence, clause and phrase thereof, irrespective of the fact that any one or more other sections, subsections, sentences, clauses or phrases be declared unconstitutional.

SEC. 22. All acts and parts of acts, inconsistent herewith, are hereby repealed.

RULES, REGULATIONS AND INFORMATION CONCERNING THE SALE OF SCHOOL LANDS TOGETHER WITH INFORMATION CONCERNING THE LEASING OF LANDS OF THE STATE OF CALIFORNIA.

Should a citizen of the United States desire to purchase land unsuitable for cultivation pursuant to the provisions of chapter 207, Statutes of California, 1919 (see page 17, ante), he should so advise the Surveyor General at Sacramento, by letter, giving a description of the land. All persons who have made their desires to purchase land known to the Surveyor General will be notified by mail when a sale of the land is to be held.

School lands unsuitable for cultivation will be sold at public auction in tracts ranging from the smallest subdivision up to 640 acres, there being no limit as to the number of acres one person may buy. The Surveyor General reserves the right to reject any and all bids. At the time of bidding each bidder must present an affidavit that he is a citizen of the United States, which affidavit must contain the postoffice address of the affiant. Agents may bid for principals, upon submission

of affidavit of citizenship of principal and power of attorney to bid for principal.

The public auction sales will be held at places designated by the Surveyor General.

At the time of the acceptance of the bid the purchaser must pay to the treasurer of the county in which the land is situated the full purchase price of the land, or ten per cent thereof with interest on the balance at the rate of six per cent per annum from the date of sale to the first of January following. The purchase price of all timber lands must be paid in full at the time of sale. Lands located within national forests are, for the purposes of sale, considered timber lands and shall be sold for cash at not less than the current price of scrip. Should the timber value exceed the current price of scrip the timber value shall be the minimum price that will be accepted.

At the date of sale all of the land sold to one person in one county and land district will be embraced in one or more locations as desired by the purchaser, the entry or filing fee of \$5 for each location to be paid to the Surveyor General at the sale. The purchaser must also pay the county treasurer \$3 for each certificate of purchase, which will be issued pursuant to the provisions of section 3514 of the Political Code, upon surrender to the Surveyor General of the receipt of the county treasurer, showing payment as herein provided.

Lands located within national forests are subject to use as scrip at any time, therefore, a prospective purchaser of such lands at auction should write to the Surveyor General after a sale date has been determined, and prior to the sale, in order to ascertain whether or not the land in which he is interested has been used as scrip.

Certificates of purchase and all rights acquired thereunder are subject to sale by deed or assignment, executed and acknowledged before any officer authorized by law to take acknowledgments of conveyances of real property, or before the register, but patent for the land must issue in the name of the original purchaser upon payment of the full purchase price (section 3519, Political Code), subject to rights of way granted to the United States by an act of the legislature approved May 18, 1921 (chapter 173, Statutes of California, 1921), for the uses prescribed in the act of congress approved June 17, 1902, relating to irrigation and reclamation and reserving in the people the absolute right to fish thereupon. (Section 25, Article I, Constitution of California.)

The state also reserves one-sixteenth of all the minerals in the land. (Chapter 303, Statutes of California, 1921.)

The State of California does not issue maps or plats showing the location of the land, but having the description, the approximate location can be determined by using in conjunction with the accompanying list, county maps which can be secured from most stationery stores at a cost of about seventy-five cents. The school lands were all surveyed by the United States government but it may be that corners have since been obliterated, in which event it will be necessary, should one desire to have the corners located, to employ a surveyor for that purpose.

State school lands suitable for cultivation are subject to sale, to actual settlers only, under the provisions of chapter 208, Statutes of

California, 1919. Forms for application to purchase may be obtained from the Surveyor General.

State school lands are subject to lease for agricultural, grazing and recreational purposes under the provisions of chapter 493, Statutes of California, 1917. Forms for application to lease may be obtained by writing to the Surveyor General.

State lands may be prospected for minerals and leases obtained to take the minerals from the lands under the provisions of chapter 303, Statutes of California, 1921. Copy of rules and regulations governing the subject matter may be obtained from the Surveyor General.

W. S. KINGSBURY,
State Surveyor General.

BIENNIAL REPORT OF THE STATE TREASURER.

Seventy-Fourth and Seventy-Fifth Fiscal Years, July 1, 1922, to June 30, 1924.

SACRAMENTO, CALIFORNIA,

September 15, 1924.

HON. FRIEND W. RICHARDSON,
Governor of California.

DEAR SIR: I have the honor to submit herewith a report reflecting the actual balance in the treasury to the credit of the state, with a summary of the receipts and payments by warrants drawn on the treasury during the two preceding fiscal years. This report contains in every detail the business transacted by this office during the seventy-fourth (74th) and seventy-fifth (75th) fiscal years, beginning July 1, 1922, and ending June 30, 1924.

The magnitude of business transacted by this office during the period above indicated is supported by the total receipts of \$186,612,976.56 for the biennial period, divided as follows:

| | |
|---|------------------|
| For the seventy-fourth fiscal year----- | \$81,393,047 97 |
| For the seventy-fifth fiscal year----- | 105,219,928 59 |
| Total ----- | \$186,612,976 56 |

The disbursements for the biennial period totaling \$188,825,139.24, divided as shown hereunder:

| | |
|---|------------------|
| For the seventy-fourth fiscal year----- | \$88,708,391 29 |
| For the seventy-fifth fiscal year----- | 100,116,747 95 |
| Total ----- | \$188,825,139 24 |

The above indicated figures reflect gross receipts and payments and include bond sales.

The colossal figures above shown evidence the volume of business transacted by this office, which has been performed by the same number of employees as were in office during the sixty-sixth and sixty-seventh fiscal years, when the receipts were \$67,732,218.32 and payments \$71,970,222.61, or 150 per cent increase over that period.

The summaries annexed to this report reflect in a comprehensive manner the complete operations of this office during the period beginning July 1, 1922, to June 30, 1924.

DEPOSITS IN BANKS.

The original act authorizing the deposit of state moneys in banks of this state was approved by the Governor on February 28, 1907. This act continued in its original form until April 12, 1923, with one exception, by a vote of the people, irrigation district bonds were made acceptable as security for state funds.

Senate Bill No. 105, approved by the Governor April 12, 1923, repealed all acts in conflict therewith. Under this act, two separate methods of depositing state moneys, known as inactive and active deposits, became applicable.

The inactive deposits must be secured by certain defined bonds, namely, United States bonds or notes, state, county, municipal, school and irrigation district; the active deposits to use the same class of securities, or approved surety bonds.

This change has proven to be beneficial to the state in a twofold way. The active funds, which had previously been held in the vaults to meet state expenses, are now immediately, upon receipt, placed in banks on an earning capacity of two per cent on daily balances. The revenue from such source is more than double the expense of maintaining this office. It also practically absolves the state from loss by burglary, etc., as there is but a nominal amount kept in the vaults.

The inactive deposits made with banks are of a permanent nature, although subject to call at any time. They are not disturbed to any great degree under normal circumstances. The rate of interest on this class of deposit runs from $3\frac{1}{4}$ per cent to 4 per cent.

On page 33 of this report, you will find a statement of the revenues derived from deposits listed as per months, for the biennium ending June 30, 1924.

During the 1922 legislature, I appeared before the Senate Finance Committee and made the statement that the revenue from deposits for the biennium would amount to \$1,500,000. I am pleased to report that the increase has been even greater. The excess amount collected over my estimate was \$159,476.99. This information was given the committee in view of the fact that the budget commission had only allowed \$900,000 for the biennium. Interest earned for the month of May, 1924, reached approximately \$95,000. This amount represents an increase of more than \$25,000 over the same month in 1922.

State money is deposited in a larger number of banks than at any previous time, the distribution of which has a tendency to stimulate production and industry, and at the same time more logically distribute the funds over the entire state.

IRRIGATION DISTRICT BONDS AS SECURITY.

The present dry year has revealed to the most pessimistic that the pioneers of this class of securities looked far into the future in taking into consideration the issuance of these bonds, the revenue from the sale of which goes toward the financing of construction, for the impounding and conserving of the mountain waters, for domestic and irrigation purposes. Lands in this state, relying upon such districts for irrigation during the dry period, in nearly all cases have been supplied with sufficient water to insure good crops.

My policy in accepting these bonds as security for state deposits has been a liberal one. I have been governed by the fact that there has not been any great fluctuation in the price of these securities, and all obligations of the districts have been fully covered. Aside from that, however, is the fact that I believe these districts, honestly and intelligently formed, will be the greatest factor in the upbuilding of the state in future years.

CORPORATION FRANCHISE TAX.

This office collects corporation franchise taxes from more than twenty-five thousand corporations semiannually, which makes an immense volume of work during the months of January, February, July

and August. The amount collected during the past two years totals \$65,837,485.41, and exceeds the collections of the previous biennial period by \$9,412,083.19.

This tax is levied by the State Board of Equalization, under what is commonly called "Constitutional Amendment No. 1," adopted by the people in 1910. While this tax is collected and acknowledged to taxpayers by this office, the books are kept and final receipts are sent out by the State Controller.

The corporation license tax is collected by the Secretary of State and by him paid to the State Treasurer in daily settlements.

The law provides that "franchise tax" shall be paid in cash, but in order to accommodate taxpayers, certified checks and bank drafts are accepted in making settlement of franchise tax.

BONDED INDEBTEDNESS OF THE STATE OF CALIFORNIA.

Present bonded indebtedness, as disclosed under schedule herewith, amounting to \$91,439,500, is an equitable amount compared to the wealth of the state. In the figures above indicated is incorporated the funded debt of 1873, amounting to \$2,277,500, bearing the interest rate of 6 per cent, which bonds are held by the state for the benefit of the following funds:

| | |
|-----------------------|----------------|
| School fund ----- | \$1,526,500 00 |
| University fund ----- | 751,000 00 |

In connection with the above paragraph, I earnestly direct your attention to the fact that the state indebtedness is increased by the amount set forth and does not properly belong under the caption of "Indebtedness." I therefore urge you to take the necessary measures to have these bonds redeemed at an early date.

OIL TAX.

The collection of an oil protection tax is an additional duty placed upon this office by the statutes, which has increased its labor.

The collections of oil tax for the past two fiscal years amount to \$404,886.94, which sum exceeds the previous biennium by \$126,919.54.

GASOLINE TAX.

The gasoline tax created by act of the 1923 legislature under section 13, and known as the "motor vehicle fuel tax," amounted to \$5,996,577.30 for the period February 1, 1924, to June 30, 1924.

BOND SINKING FUNDS.

There are a number of sinking funds created for the payment of interest and principal on state bonds. The creation of new funds of this character and the provisions for investments will further add to the work of this office. The sinking funds are enumerated and briefly explained as follows:

San Francisco Seawall Sinking Fund. Monthly transfers from the revenues of the San Francisco Harbor are made to provide for the payment of principal and interest on the San Francisco Seawall bonds, act 1903. The balance of this bond issue was redeemed January 2, 1924.

Second San Francisco Seawall Sinking Fund. Monthly transfers from the revenues of the San Francisco Harbor are made to provide for

the payment of interest on the San Francisco Harbor improvement bonds, act 1909.

Third San Francisco Seawall Sinking Fund. Monthly transfers from the revenues of the San Francisco Harbor are made to provide for the payment of the principal and interest on the San Francisco Harbor improvement bonds, act 1913.

India Basin Sinking Fund. Monthly transfers from the revenues of the San Francisco Harbor are made to provide for the payment of interest on the India Basin bonds.

State Highway Sinking Fund. This fund is replenished semiannually by transfers from the general fund to pay interest on the first state highway bonds.

Second State Highway Sinking Fund. This fund is replenished semiannually by transfers from the general fund to pay interest on the second highway bonds, act 1915.

Third State Highway Sinking Fund. This fund is replenished semiannually by transfers from the general fund to pay interest on the third highway bonds, constitutional amendment, 1919.

Interest and Sinking Fund of the University of California Building Bonds. This fund is replenished semiannually by transfers from the general fund to pay interest on the University of California building bonds.

UNIVERSITY OF CALIFORNIA BUILDING BONDS.

At the general election of November, 1914, a bond issue of \$1,800,000 was authorized, the proceeds to be devoted to the construction of additional buildings at the state university at Berkeley. These bonds were all sold. The first forty of this issue were paid in January, 1921, and the same number will become due each year thereafter until 1965.

SAN FRANCISCO STATE BUILDING BONDS.

At the general election in November, 1914, a bond issue of \$1,000,000 was authorized, the proceeds of which were to be used in the construction and equipment of a state building in San Francisco. This issue has all been sold and the first one hundred forty have matured and been paid. Twenty of these bonds mature yearly. The outstanding bonds of this issue are \$840,000.

SACRAMENTO STATE BUILDING BONDS.

At the general election in November, 1914, the issuance and sale of \$3,000,000 of bonds was authorized, the proceeds of which were to be used in the construction of additional capitol buildings in Sacramento. These bonds have been prepared and sold. All of these bonds are due fifty years after date, and \$50,000 must be transferred each year from the general fund to the sinking fund and invested by the State Treasurer in bonds for the purpose of paying the principal.

STATE HIGHWAY BONDS.

Of the issue of \$18,000,000 state highway bonds provided for by the Statutes of 1909, the first \$400,000 matured July 3, 1917, and were paid. Four hundred of these bonds mature yearly until all have been wholly redeemed. Up to June 30, 1924, only \$2,800,000 of these bonds had been

paid. Under the original act the interest on these bonds was paid by the counties, but in November, 1921, this financial burden was passed on to the state.

SECOND STATE HIGHWAY BONDS.

At the election of November 7, 1916, there was authorized an additional \$15,000,000 state highway bonds. All of these bonds have been sold. On July 3, 1923, these bonds will begin to mature at the rate of 375 annually until all have been wholly redeemed. Under the original act the interest on these bonds was paid by the counties, but in November, 1921, this financial burden was passed on to the state.

THIRD STATE HIGHWAY BONDS.

At a special election held on July 1, 1919, there was authorized the issuance of 40,000 state highway bonds. On July 3, 1926, these bonds will begin to mature at the rate of one thousand annually until all have been redeemed. An act voted upon on November 2, 1921, places all interest charges upon the state and relieves the counties from this payment as provided in the original act: This act provided for the destruction of the remaining bonds and the engraving of new bonds at an interest rate to be determined by the State Highway Finance Board. On March 23 to 28, 1921, were canceled and destroyed 34,878 of these bonds. Up to June 30, 1924, \$37,000,000 of the authorized issue were sold, and the balance of \$3,000,000 were advertised for sale on June 26, 1924, but later the sale of these bonds was postponed to July 10, 1924, and said bonds were sold on this date.

SAN FRANCISCO SEAWALL BONDS, ACT 1903.

These bonds were provided for under an act approved March 30, 1903, being an issue of \$2,000,000. Statutory provision was made whereby these bonds would be matured by lot, on drawing, between the first and tenth days of November, beginning in 1914. On June 30, 1923, outstanding bonds of this issue amounted to \$115,000, which were redeemed January 2, 1924.

SAN FRANCISCO HARBOR IMPROVEMENT BONDS, ACT 1909.

An issue of \$9,000,000 of these bonds was provided for under the Statutes of 1909. This issue has been sold and the interest is being paid out of the revenue of San Francisco Harbor.

SAN FRANCISCO HARBOR IMPROVEMENT BONDS, ACT 1913.

At the general election held in November, 1914, a bond issue of \$10,000,000 was authorized for the erection of wharves, piers, seawall and other betterments of the San Francisco Harbor. Bonds to the amount of \$3,000,000 had been sold up to June 30, 1924.

INDIA BASIN BONDS.

These bonds were authorized under the Statutes of 1909 for the amount of \$1,000,000, to provide a fund for the acquisition by the Board of Harbor Commissioners of a necessary area for a tidal basin for wharves, piers, etc., in San Francisco. Litigation tied up action for several years. There have been sold of this issue bonds to the amount of \$853,000.

INDIAN WAR BONDS ACTS OF 1857 AND 1860.

Indian war bonds amounting to \$4,000, as shown in detail under schedule of bonded indebtedness, have matured and interest thereon expired.

VETERANS' WELFARE BONDS

These bonds were authorized under an act of 1921, in the sum of \$10,000,000, of which there have been sold \$4,000,000 during the seventy-fifth fiscal year. Interest on these bonds is to be paid out of the general fund, which interest will be reimbursed to the general fund when funds for the purpose are available.

Sacramento State Building Sinking and Interest Fund. This fund will be replenished by interest on investments and semiannual transfers from the general fund to pay interest on the Sacramento State Building bonds.

San Francisco State Building Sinking Fund. This fund is replenished by semiannual transfers from the general fund to pay principal and interest on the San Francisco State Building bonds.

In submitting this report, I desire to express appreciation for the cooperation of the various departments with the personnel of my office.

Respectfully submitted.

CHARLES G. JOHNSON,
State Treasurer.

| | | | | | | | 4,000,000 | 6,000,000 |
| Totals | | | \$111,605,000 | \$4,018,500 | | Totals | \$91,439,500 | \$16,147,000 |

*On November 8, 1920, by a vote of the people of the State of California, the State Board of Finance was authorized to raise the coupon rate of interest on the unsold balance of these bonds up to and including 6%. To June 30, 1924, \$21,878,000 of these bonds, bearing the rates of 4¾%, 5%, 5½%, 5¾%, and 5¾%, maturing 1926 to 1962, inclusive, have been sold.

*Total Highway Bonds outstanding, \$87,000,000.

†On June 26, 1924, there will be offered for sale \$3,000,000 4½% State of California Highway Bonds, the remaining lot of the \$10,000,000 issue. (This date was postponed to July 10, 1924, and said bonds were sold on that date.)

‡These bonds are owned by the State and held in trust by the State Treasurer for the benefit of the following funds: School fund, \$15,000,000; University fund, \$751,000. The interest on the above bonds is paid in accordance with an Act of the Legislature dated March 3, 1893.

FRANK J. SMITH, Superintendent
SACRAMENTO, 1923

SEVENTH REPORT

OF THE

CALIFORNIA STATE BOARD OF ARCHITECTURE

To His Excellency,

FRIEND WM. RICHARDSON,

Governor of the State of California:

The California State Board of Architecture herewith submits for your consideration, its seventh report, covering the period from November 1, 1920, to March 31, 1923.

In accordance with the provisions of "An Act to regulate the practice of architecture," the State Board of Architecture shall consist of ten members, five of whom shall reside in the Northern District of California and shall constitute the Northern District Board for the examination of applicants for certificates to practice architecture in this state, and five members of said Board shall be residents of the Southern District of California and shall constitute the Southern District Board for the examination of applicants for certificates to practice architecture in this state.

The Board is at present constituted as follows:

| | |
|--|--------------------------------------|
| CLARENCE R. WARD, San Francisco | <i>President</i> |
| WILLIAM J. DODD, Los Angeles | <i>Vice-President</i> |
| SYLVAIN SCHNAITTACHER, San Francisco | <i>Secretary-Treasurer</i> |
| A. M. EDELMAN, Los Angeles | <i>Assistant Secretary-Treasurer</i> |
| JOHN PARKINSON, Los Angeles. | |
| WILLIAM H. WHEELER, San Diego. | |
| MYRON HUNT, Los Angeles. | |
| JAMES R. MILLER, San Francisco. | |
| JOHN J. DONOVAN, Oakland. | |
| EDWARD GLASS, San Francisco. | |

The Northern District Board, with offices at 437-438 Phelan Building, San Francisco, is as follows:

| | |
|-----------------------------|----------------------------|
| CLARENCE R. WARD | <i>President</i> |
| SYLVAIN SCHNAITTACHER | <i>Secretary-Treasurer</i> |
| JAMES R. MILLER | |
| JOHN J. DONOVAN | |
| EDWARD GLASS | |

The Southern District Board, with offices at Pacific Finance Building, Los Angeles, is as follows:

| | |
|-----------------------|----------------------------|
| WILLIAM J. DODD | <i>President</i> |
| A. M. EDELMAN | <i>Secretary-Treasurer</i> |
| JOHN PARKINSON | |
| WILLIAM H. WHEELER | |
| MYRON HUNT | |

Since the submission of the Sixth Report another attempt was made during the 1921 session of the State Legislature to amend the Act Regulating the Practice of Architecture. The proposed amendment increased the maximum fine from \$500.00 to \$600.00 in order that violators of the Act might be tried in the superior court and amended the wording of section 5 to read after the words "indicated to the public" "that he was or is an architect, certificated or otherwise without having said certificate or to knowingly cause or permit such advertisement, or sign, or card, or other device to be put out or displayed."

As before, the purpose of these amendments was in no wise intended to restrict the legitimate activities of those engaged in the building industry, but was intended to make the Act more effective in protecting the public against unqualified practitioners. The amendments were not reported out of committee.

At the time of writing, it is proposed by Senate Bill No. 442 to establish a Bureau of Professional Standards to take over the work of all State Boards administering laws for professional registration. There can be no valid objection to this measure, providing the proper examining Boards are assured by the provisions of the Act.

The annual meetings of the joint Boards were held as follows: San Francisco, April 15, 1921; Los Angeles, May 11, 1922, and San Francisco, April 10, 1923.

In addition, each Board has held the usual stated meetings. Written examinations have been held each year for the Northern District Board at the University of California at Berkeley, and for the Southern District Board at the University of Southern California, Los Angeles.

(For number of certificates issued, see financial statements.)

The following modification of the rules of the Board was adopted at the meeting of the joint Boards held at Los Angeles, May 11, 1922.

"Any person delinquent in the payment of annual license fees shall not be granted a renewal of his certificate unless the delinquent fees have been paid, and including the necessary fees in connection with the new application, and provided that the professional conduct of the applicant has not been in question."

All of which is respectfully submitted.

CLARENCE R. WARD,
President.

SYLVAIN SCHNAITTACHER,
Secretary and Treasurer

Dated March 31, 1923.

REPORT OF THE DIVISION OF ARCHITECTURE. STATE DEPARTMENT OF PUBLIC WORKS.

GEO. B. McDOUGALL,
Chief of Division.

HISTORY AND PURPOSE.

The State Department of Engineering, of which the Bureau of Architecture was a part, was created by an act of the legislature, approved March 11, 1907, chapter 183, Statutes of the year 1907, and was organized in the May following. The Bureau of Architecture was organized very shortly thereafter and immediately began its activities.

On July 30, 1921, changes in the organization of the state government, as made by the legislature of 1921 and approved by the Governor, went into effect. The former Department of Engineering, with its Bureau of Architecture, was abolished and its functions transferred to the Department of Public Works, with five divisions, of which the Division of Architecture was one. On August 17, 1923, a new Department of Public Works was created under chapter 286, Statutes of the year 1923, which provided for three divisions, of which the Division of Architecture is one. The activities of the Division of Architecture and the former Bureau of Architecture cover, therefore, a period of approximately seventeen years.

During the first few years of its existence the work of the Bureau of Architecture consisted almost entirely of the preparation of plans and specifications for new buildings, repairs and alterations to existing buildings, and general supervision of the construction thereof. The work was therefore similar to that of the average architect of private practice, except for the fact that construction has in most cases been at a considerable distance from the central office. As the years have passed, however, the responsibilities have constantly increased, as has also the number of institutions and general building activity in the state, until the present large force is required to handle the work. The duties of the Division of Architecture at the present time may be summed up as follows:

To make plans and specifications for all new buildings of a value in excess of \$1,000 at the various state institutions; to let contracts for and superintend their erection, or, in case satisfactory contracts can not be made, to construct the buildings by day labor; to care for all alterations and repairs to existing buildings, on the same basis where the amount involved is in excess of \$1,000; to design and install all heating, lighting, ventilating, refrigerating, water supply, mechanical and electrical plants of every nature—whether changes, extensions, or original; survey grounds, lay out walks, drives and roads; provide water supply, sewer and drainage systems, requiring the design and construction of dams, reservoirs, pipe lines, wells, pumping plants, ditches, sewage treatment and disposal plants and drains.

The State of California has at the present time twenty-seven major institutions, at which the division functions as outlined in the preceding paragraph. In addition to these, there were twenty places at which either construction of some kind was supervised, or expert assistance given during the past two years.

Cottage for Day Employees, Sonoma State Home, Eldridge, California.

These forty-seven points of activity are scattered from one end of the state to the other, this element of distances to overcome being one of the most difficult of the conditions surrounding the activities of the division. The map printed herewith shows the names and location of these places.

ORGANIZATION.

The organization of the Division of Architecture, together with the number and distribution of its employees, are indicated by an organization chart and personnel on pages 6 and 7. In addition, the Division maintains, in conjunction with the Division of Engineering and Irrigation and Division of Water Rights, an accounting department of seven employees.

The present organization, which is the result of gradual evolution and a thorough study by the executive heads of the Division, has proven to be practically perfect by more than seven years of experience. Definite authority and responsibility have been fixed to such a degree that friction and overlapping of activities are reduced to a minimum. The nature of the work of the Division and of the state's property at its various institutions is such as to require the services of the heads of the various branches, and of some other employees in the three sections making up the Division, continuously during twelve months of the year. The duties of these men are executive or of a general character that renders a proper segregation of the time spent on different jobs impracticable. There are twelve of these continuously employed and they make up what might be considered as the skeleton organization of the Division.

FINANCES OF THE DIVISION.

The expenses attendant upon the operation of the Division of Architecture are met as follows:

(1) Under chapter 121, the legislature of 1923 provided a salary fund for the Division of Architecture of \$31,656. This amount is sufficient only to cover the salaries of the Chief of Division, Assistant to the Chief of Division, Acting Chief Engineer and General Superintendent of Construction.

(2) All other employees are paid out of special appropriations for construction or billed to the department or institution for which the work is done. An exact record of the time spent on each project is kept and the value of this time, based on salary paid, is deducted from the appropriation or billed to the department or institution at the end of each month.

(3) By an appropriation for support, chapters 121-23, amounting to \$20,350, which covers traveling expenses, including automobiles as required by the employees continuously employed, telegraph and telephone, postage, office supplies, printing and furniture.

OPERATION OF THE DIVISION.

Under the subject of operation, the activities of the Division of Architecture can be listed under three main subdivisions:

- (1) Construction by contract or subcontracts.
- (2) Construction by day labor.
- (3) Miscellaneous activities.

Assistant Physician's Residence, Norwalk State Hospital, Norwalk, California.

A brief explanation of the services performed under each of the three headings will give an understanding of services that are being rendered.

Construction by Contract.

A full understanding of the project in hand is first obtained by visits to the site by the members of the section most intimately concerned, and by full discussions with the head of the institution and his or her assistants. Complete preliminary sketches and itemized estimates of cost based on them are made; conferences are continued with the institution authorities and any required adjustments made, until both the plans and the estimated cost are satisfactory. Formal approvals on the above are then requested of those in authority to proceed with the work on a definite basis. These being given, the working drawings are then prepared, including the architectural, structural, mechanical and electrical scale drawings, and all typical full-size architectural details. Specifications are written covering all branches of the work separated according to trades involved. After bids have been received, the contract papers are executed, additional approvals obtained, after which actual construction is ordered ahead. A special inspector is put in charge, in accordance with the requirements of law, to see that the interests of the state are protected. On small and relatively unimportant projects, this requirement is often met by securing the assistance of an institution official, qualified and willing to care for the work along with his regular duties.

The office maintains a constant general supervision over all work in the field by periodical trips, correspondence, etc.

The auditing of all accounts, payments of all claims, and similar work is cared for by the Accounting Department.

Construction by Day Labor.

The method used in handling this type of work is exactly the same as for contracts up to the point of making working drawings. As the construction is in the direct charge of the Division, it is not necessary that such complete drawings be prepared. Skeleton specifications are written and other necessary information is conveyed by notes on the drawings, or by letter to the superintendent or general foreman in charge.

Complete bills of materials for all branches of the work are prepared in the office, and, where practicable, are checked by the representative in the field. Requisitions are then prepared and sent to the State Purchasing Agent, who attends to the actual purchases. Great care is necessary in the preparation of the lists and descriptions, as the whole transaction lacks the possibility of personal touch between buyer and seller; and, as the average time required from the issuance of the requisition to the delivery of the material is about three weeks, it is obvious that mistakes in deliveries, which could disrupt the entire program, must be prevented.

In connection with mill work and similar items, it has been found advantageous to detail and list off accurately every piece of milled stock required, all doors, sash, etc., and furnish the bidders with such

Cottage No. 21, Whittier State School, Whittier, California.

complete information. This takes the place of the usual "mill bid" of commercial practice, where there is always a chance of misunderstanding as to limits of requirements, and which furthermore requires each and every bidder to list off the materials, for which unnecessary multiple service the state would have to pay. Such work naturally increases overhead costs, but this is considerably more than offset by the lower bids received for the materials.

All necessary mechanics and laborers are employed direct, this alone requiring considerable attention by the office force, due to the necessity of securing such assistance through the medium of the Civil Service Commission, with the attendant additional burden of clerical work.

All accounts are audited as mentioned under contract work, these representing much more detail, since all claims for labor and every individual purchase of materials must be taken care of separately.

Day labor construction work is handled in the field by a competent superintendent of construction; this agent of the Division being an active director of construction work rather than one who simply inspects the work of others as in the case of contract work. At weekly intervals on day labor work he reports to the office on the total amount of work done on a project, which, with the segregation of his payroll and cost accounting system maintained in the central office, enables the Division at any time to know whether or not a project is being completed within the original amount estimated.

Miscellaneous Work.

This subdivision includes all the activities of various sections of the Division over and above those directly related to projects for which money has actually been appropriated.

Assistance of an advisory nature is constantly being rendered the various departments and institutions, in connection with technical subjects. Sketches and estimates are prepared for considerable proposed work that is never carried to completion. Development plans for the new institutions, and for proposed changes in the older ones, are constantly being worked on. Also plot plans showing existing conditions, that the Division has never been able to finance in a comprehensive way, and the lack of which represents a serious handicap, are kept up to date to the best of our ability.

It is not possible to give an accurate account of the amount of time spent by the employees of the Division on this miscellaneous work. It is safe to say, however, that as a minimum estimate one-third of the time of the employees included in the skeleton organization is devoted to the handling of these miscellaneous details.

When working drawings for a project are started in the drafting room, a decision is made by the executive head of the Division on the method of construction to be followed; that is, whether the work shall go ahead on a basis of contracts, subcontracts, or day labor. The contract method is used where the work is conveniently located, where the estimates indicate that the cost will be large enough to attract sufficient bidding, where the state is unable to supply any labor or materials, and when some special type of labor or equipment is needed for the proper execution of the work.

School and Assembly, Whittier State School, Whittier, California.

Subcontracts are made in some cases rather than a general contract, where it can be demonstrated that a saving to the state can be effected in handling the work in this manner. When such a procedure is followed, the Division of Architecture acts in the same capacity as a general contractor. Construction work on the Sacramento state buildings is being carried on by the subcontract method.

The day labor plan is adopted at some institutions where inmate labor is available for construction work, at isolated institutions which do not attract the bidding of contractors, and on some repair and alteration jobs which are often difficult to cover by contract. In many cases where a job is handled by day labor, certain portions of the work are let to subcontractors where it is demonstrated that a saving to the state can be made or a better grade of work secured.

In view of the fact that from four to six weeks elapse from the time obligations accrue until the claims covering them can be approved and paid, the legislature has provided for the use of the Department a cash revolving fund of \$30,000 appropriated by chapter 419, Statutes of the year 1917, to be used in advancing cash payments for labor, material and supply bills where such payments are necessary for the proper conduct of the business of the Department.

This cash revolving fund of \$30,000 is for the joint use of the Division of Engineering and Irrigation and the Division of Architecture, \$5,000 having been allotted to the Division of Engineering and Irrigation and \$25,000 to the Division of Architecture.

The volume of day labor work being done by the Division of Architecture, as indicated hereinabove, is such that this amount of \$25,000 has proven insufficient, so much so that the Department of Finance has loaned to the Division, to be paid back on demand, the sum of \$22,000.

FUNDS AVAILABLE FOR CONSTRUCTION WORK.

On July 1, 1922, there was available for construction \$6,178,452.51. To this amount must be added \$1,131,510 appropriated by the 1923 legislature and \$67,484.80 transferred to the Division of Architecture from contingent and other funds of institutions and departments, which total \$7,377,447.31. During the biennium \$224,144.01 was transferred to the institution for the purchase of equipment, etc., and on June 30, 1924, there was a balance of \$2,643,702.31 still available for construction purposes. Deducting these two latter amounts from the \$7,377,447.31 available on July 1, 1922, left \$4,509,600.99 expended during the biennium for construction purposes.

PROGRESS OF WORK USING AVAILABLE FUNDS.

Using the funds mentioned above, the following report indicates the progress made on construction work by the Division of Architecture during the period from July 1, 1922, to July 1, 1924. The report shows the work grouped under the various institutions indicates the funds used, the various projects with actual or estimated costs under these funds and the status of the work on July 1, 1924.

Report indicating status of construction work provided by the 1923 Legislature and showing the progress which has been made during the period of July 1, 1923, to July 1, 1924.

Woman's Relief Corps Home, Near San Jose.

- Emergency Resolution 27—Emergency appropriation seventy-fourth fiscal year.
Pro. 198, W.O. 364—Low pressure steam heating system, \$7,000. Completed.

The above report indicates that, in carrying on the construction work provided for the two-year period by the 1923 legislature, the Division of Architecture completed or had under construction more than half of the projects at the end of the first year. In addition, all preliminary work has been done on the balance of the program, so that when the next appropriations become available all of the projects for which money is now available will have been practically completed.

COST OF OPERATION.

The seventy-fifth fiscal year is taken as a typical year. The Division of Architecture during the seventy-fifth fiscal year expended \$2,770,-265.47. Deducting \$115,935.83 expended for salaries plus \$10,175 expended for support equals \$126,110.83 total expended by the Division of Architecture; there is left a total expenditure for actual construction amounting to \$2,644,154.64, which figure shows a percentage of expenditure for salaries and support of the Division of Architecture of .047. Of the \$2,644,154.64, approximately \$315,000 was expended on work done entirely by contract; the remainder, \$2,334,783.26, to which, on account of the use of patient and prisoner labor, at least \$100,000 must be added to arrive at the actual value of the work, having been handled by the Division on the basis of day labor, which method, while considerably reducing the total cost of the work, entails greater expense for operating the Division of Architecture than the contract method.

As explained under the portion of this report devoted to the operation of the Division of Architecture, a considerable amount of time and money is spent by the employees of the Division in handling the miscellaneous activities at the various state institutions; these services rendered being in addition to the work on the actual projects under consideration.

The customary fee for straight architectural services is 6 per cent. At a cost of approximately 4.7 per cent to the state, the Division of Architecture has rendered on the work considered the usual architectural services and in addition has superintended and built a large percentage of the projects on a basis of day labor, which involves the listing, ordering and delivery of materials, the employment of competent workmen, and considerable cost accounting work. The usual charge for this service by a contractor on a percentage basis is 10 per cent and is in addition to the architect's fee.

New Receiving Building, Stockton State Hospital, Stockton, California.

RECOMMENDATIONS.

The State of California, through the services of this Division, is obtaining a high standard of excellence in all its buildings and mechanical installations from the standpoint of design, and figures show that this is being done economically.

There are three vital points, however, in connection with the work that must be constantly kept in mind in order that the construction work of the Division of Architecture may be properly carried forward. These three points are, first, that all construction projects should be carefully estimated and properly financed; second, that the state adopt a policy of permanent building construction at all institutions where same is considered advisable; and, third, that the Division itself be financed in such a manner as to as nearly as possible eliminate friction between the institutions and departments served and the Division.

Legislatures previous to 1921, in making appropriations for building construction, had followed the policy of extreme itemization as to particular work to be done and separate amounts for separate pieces of work. This policy produced an inelasticity in the expenditure of funds for building construction that was a distinct handicap in securing best results. The 1921 legislature, in a large degree, changed this policy by making lump sum appropriations for building construction at the various institutions. This change removed the difficulty, which in some cases created an impossible condition growing out of the necessity under the earlier policy of making each particular piece of work fit the special amount of money set aside for it at a time when full information necessary could not be available. The 1923 budget largely reverted to the practice of extreme itemization used prior to 1921. The Budget Board, in considering requests for appropriations for building construction to be presented to the 1925 legislature is now again, as we understand it, using the lump sum method as far as practicable. The results in the actual execution of the work provided for by the legislature should, and doubtless will, be satisfactory.

To a certain extent the policy, in connection with construction work in this state in the past, has been to keep first cost at a minimum by using inferior materials, principally in the shape of wood frame construction. Most of these structures are used to house inmates at the various institutions, and where this policy has been adopted it has been the somewhat natural outgrowth of the present necessity for rapid increase in accommodations. In these cases the real economy of good building is ignored, and, instead of a steady, permanent growth, the institutions affected have been developed in a way that will demand reconstruction within a comparatively few years.

When all the points in connection with the construction of a state institution are considered and carefully analyzed, it will be found that there is no saving effected in the long run by the use of wood frame construction.

The difference between a fire-resisting and a wood frame building is largely in the rough shell. It is necessary to use practically the same grade and amount of interior finish, doors, windows, floors, painting, hardware, heating, plumbing, electrical work, etc., in each type. The result is that the first cost of fire-resisting buildings is largely only

from 15 to 20 per cent greater than of the cheaper type, while its life is easily double that of a wood frame structure. Furthermore, the cost of upkeep of the noncombustible building is much less than the other, so that it is probable that if the total expenditure for first cost and upkeep of a wood frame building taken over a period of twenty years were compared with the first cost of a fire-resisting building, including its upkeep for twenty years, there would be practically no difference in total amount.

Fires are occurring more or less frequently in state structures and, if the policy of using wood frame construction for permanent buildings is not entirely abandoned, there is great danger of a rude awakening to the error in following such policy occasioned by a conflagration causing the loss of many thousands of dollars worth of property, or, worse than that, the loss of the lives of inmates unable to escape because of the inflammable nature of the structures.

The provision of a lump sum intended to cover all salary and support expense involved in the operation of the Division of Architecture, and based on the total amount of proposed budget provisions for the coming biennium for construction work for all institutions and departments, would not in any way affect the amount of this expense and would make for increased efficiency and the elimination of friction. It would be best, however, not to change the present provisions of the Building Act covering this matter, so as to cover possible and probable unforeseen contingencies.

FIFTH REPORT
OF
STATE PURCHASING AGENT
OF
STATE OF CALIFORNIA

December 15, 1924

CALIFORNIA STATE PRINTING OFFICE
JOHN E. KING, State Printer
SACRAMENTO, 1925

REPORT OF STATE PURCHASING AGENT.

HON. G. G. RADCLIFF,

Director of Purchase and Custody.

I submit herewith report of the work of the State Purchasing Agent's office and stores, for the seventy-fourth and seventy-fifth fiscal years. The matters treated in this report will be considered in the following order:

First—Total purchases for all institutions and departments, showing the value of purchases for each of the more important institutions and departments in each of the various lines or classifications of materials, and the grand total of all purchases made by this office. Under this head is also shown the classification of the purchases for the State Harbor Commission.

Second—Cost of administration of the Purchasing Agent's office; also cost of branches in San Francisco and Los Angeles, and cost of operating stores, showing percentage of cost to business transacted.

Third—Report of the business of the stores division, and statement of status of revolving fund as of June 30, 1924.

Fourth—Manner of making tests of materials and tests made for the biennium, with cost of same.

Fifth—A comparison of prices paid by the Purchasing Agent for staple lines of merchandise, giving the average unit price paid each quarter as compared to the jobbing or wholesale quotation prices each quarter for the same lines and quantities.

Sixth—Some examples of special savings accomplished by the Purchasing Agent's organization.

Seventh—Observations and general conditions, and suggestions for betterment in conduct of the state's business.

TOTAL MONEY VALUE OF ALL LINES OF MERCHANDISE PURCHASED FOR ALL DEPARTMENTS AND INSTITUTIONS.

Table I.—In this table the various materials purchased are grouped according to the dealers' lines as far as possible. The value of the purchases in each line of commodities for each of the institutions and larger departments is arranged in column order. At the foot of each column is shown the total purchases for the institution or department. The total value in each line of commodities for all institutions is shown in the further right-hand column. The footing at the bottom of the last column shows the total value in all lines for all departments and institutions.

TABLE

Total Value of All Lines

| Grand Total..... | | | |

Table II.—In this table is given the commodity purchases and the total of the Harbor Commission branch. The total represents the purchases for use on the Harbor and Belt Railroad, handled by Arthur J. Burton as an assistant of the main office.

In addition to the purchases shown in this commodity table, Mr. Burton's office is used daily for pick-up service and emergency calls, the total of which is included in the general office Table I.

TABLE II.
Harbor Commission Branch.

| | |
|---|----------------|
| Automobile repairs and accessories..... | \$4,317 33 |
| Automobile tires and tubes..... | 2,063 56 |

| Iron and steel, heavy..... | 41,319 76 |
| General hardware..... | 50,251 29 |
| Miscellaneous..... | 45,783 01 |
| Total..... | \$1,164,125 53 |

The following is the materials handled through the stores division for the Board of State Harbor Commissioners:

| | |
|------------------------------------|--------------|
| July 1, 1922, to July 1, 1923..... | \$408,463 07 |
| July 1, 1923, to July 1, 1924..... | 414,321 86 |
| Total..... | \$822,784 93 |

The handling of all salvage for the State Harbor Commission is under the supervision of the State Purchasing Department and the amount sold is as follows:

| | |
|--|-----------|
| Old lumber sold July 1, 1922, to July 1, 1923..... | \$837 77 |
| Old lumber sold July 1, 1923, to July 1, 1924..... | 1,924 17 |
| Miscellaneous junk sold July 1, 1922, to July 1, 1923..... | 7,065 52 |
| Miscellaneous junk sold July 1, 1923, to July 1, 1924..... | 4,519 41 |
| Total junk sold July 1, 1922, to July 1, 1924..... | 14,346 87 |

On account of the low price of salvage we have let the junk accumulate and there is approximately \$1,500 to \$2,000 worth of junk to be disposed of as soon as the market strengthens.

Under our present plan of having all materials on the harbor front under direct supervision of Mr. Burton, and the disposition of same reportable to him, very little, if any, material is lost, and it is due to this supervision entirely that the amount shown above as salvaged from junk materials can be shown.

In the foregoing, you will note, first, the total purchases made by the Harbor Commission; second, the value of the materials distributed

from the Harbor Commission's stock in stores to the harbor activities (the distribution of materials to the other institutions and departments of state are shown in our general report of stores); third, the value of surplus material and junk disposed of by the Harbor Commission branch.

Also, I am glad to make note in this report of the following special instances of savings made by Mr. Arthur Burton mentioned in his report to me. These are only a few instances given to show how the purchaser can, by his training and experience, accomplish savings and economies every business day of the year.

The following will show a saving on a few items of lumber (mill shipment):

| | Market price | Purchased at |
|---------------------------------|--------------|--------------|
| May 22, 1923—80,533 feet----- | \$3,040 12 | \$2,577 06 |
| July 24, 1923—80,133 feet----- | 3,024 32 | 2,323 86 |
| April 11, 1924—82,667 feet----- | 2,604 01 | 2,054 27 |
| May 7, 1924—80,740 feet----- | 2,554 12 | 2,222 65 |
| Totals----- | \$11,222 57 | \$9,177 84 |
| Total saving----- | | \$2,044 73 |

On some special machine work we obtained bids from concerns handling this special work for various industries here. The bids were \$190.38, \$200.40 and \$212.92. A plant had just installed new machinery and we asked them to make a bid on this same job and their bid was \$48. We sent an inspector to their plant and they completed the job for \$48, rendering a first class job at a saving of----- 142 38

This department has been buying the first grade manilla rope at a price of 1½¢ per lb. under the market price. The total purchases of various sizes of rope from July 1, 1922, to July 1, 1924, 55,840 lbs., which shows saving of----- 837 60

At times, when machinery is requisitioned, we find by shopping around we can purchase machinery which has had little or no use at a great saving. As an instance, one of the departments desired a special machine. The market price was \$600 for a new machine. We purchased one as good as new for \$200, showing a saving on this transaction of----- 400 00

By keeping track of all materials which are turned in to be sold, we have an opportunity at times to trade in old articles to apply on the purchase price of the new ones. As an instance, we had previously purchased two foam extinguishers for the oil plant at \$300 each. After same had served their purpose for several years and the oil plant having been abandoned, we traded them in on two new extinguishers of the acid type for \$410, thus having the new extinguishers cost \$35 each instead of \$240 each----- 410 00

Table III.—This table gives the value of purchases made by the Los Angeles office showing the various commodities which go to make up these totals. The amount of purchases made entirely through the Los Angeles office can be very materially increased when we can secure the cooperation of the jobbers and manufacturers in Los Angeles and vicinity more thoroughly. These figures are included in the quantities listed under Table I.

TABLE III.
Los Angeles Branch.

| | |
|---|--------------|
| Automobiles and automobile equipment----- | \$10,942 16 |
| Lumber and building material----- | 121,739 98 |
| Drugs, chemicals, hospital equipment and supplies----- | 3,281 14 |
| Farm machinery, miscellaneous farm supplies----- | 17,862 31 |
| Fuel and feed----- | 25,402 83 |
| Hardware, plumbing and electrical material----- | 27,231 10 |
| Mechanical equipment, tools, etc.----- | 9,680 11 |
| Leather goods, textiles and miscellaneous institutional supplies----- | 26,934 78 |
| Furniture, office equipment and supplies----- | 21,724 64 |
| Subsistence----- | 34,904 70 |
| Blanket authorization purchases----- | 5,313 57 |
| Total----- | \$305,017 32 |

Table IV.—The cost of purchasing this vast quantity of material shown in the foregoing tables is set forth in Table IV. Bear in mind that I have separated the cost of purchasing from the cost of stores and distribution, and Table IV gives only the cost of purchasing. The cost of stores and distribution is shown in next table.

TABLE IV.
Cost of the Function of Purchasing.

| | |
|---|----------------|
| Main office— | |
| Printing | \$2,570 40 |
| Salaries | 68,585 44 |
| Fixtures (P. & E.) | 473 66 |
| Supplies | 1,425 08 |
| Postage | 5,928 00 |
| Traveling expenses | 1,863 95 |
| Telephone and telegraph | 3,167 87 |
| Auto expense, including purchase of new auto | 2,622 97 |
| Testing charges, laboratory, Highway Commission, Sacramento | 1,138 75 |
| Testing charges, Pure Food and Drug Laboratory, Berkeley | 320 00 |
| Miscellaneous | 620 27 |
| Harbor Commission Branch (main office)— | |
| Salaries | 9,925 00 |
| Los Angeles Branch— | |
| Salaries | 8,336 24 |
| | \$106,977 63 |
| Total amount of purchases, Sacramento office | \$8,781,116 46 |
| Total amount of purchases by Harbor Commission | 1,164,125 53 |
| Total amount of purchases | \$9,945,241 99 |
| Percentage of cost of operating | 1.076 per cent |

Table V.—In this table is shown the total business of the stores in Sacramento, San Francisco, and supply store in Los Angeles, operated by our revolving fund for the two years, giving the business done in each month of the biennium, the total business for the period and the cost of operation of the stores and distribution.

I would like to call your particular attention, in passing, to the percentage of cost of operation of both the function of purchasing and of stores and distribution based upon the total business transacted:

The percentage of cost of purchasing is $17\frac{7}{1000}$ per cent.

The percentage of cost of stores is $5\frac{1}{100}$ per cent.

For economy of operation I think I am safe in making the statement that there are few, if any, private enterprises that can show as good record.

TABLE V.
Sales, Stores Division, July 1, 1922, to June 30, 1924.

| 1922 | | 1923 | |
|-----------------|-------------|-----------------|-------------|

| Increase in operating assets..... | | 9,140 90 |
| | | <hr/> |
| Total accountability | | \$222,178 55 |

TESTING MATERIALS.

The present method of having all tests made by the laboratory connected with the Highway Commission, who have a complete and well equipped laboratory, is highly satisfactory and more economical than the separated laboratories; all tests made on account of a purchase being paid to the highway laboratory by the Purchasing Department on the cost plus overhead basis, the samples to be tested being sent by the various institutions to the laboratory through the Purchasing Agent. This prevents much useless duplicating of tests and very materially reduces the total number of tests made, at the same time giving ample check as to the material received.

Please note comparison of costs of tests made in seventy-second and seventy-third fiscal years, for all institutions, with the total number of tests made in the seventy-fourth and seventy-fifth fiscal years:

From July 1, 1920, to September 1, 1921, a period of 14 months, 1451 samples were tested at a total cost of \$6,650.47.

From July 1, 1923, to July 1, 1924, 225 samples were tested at a total cost of \$1,138.75.

Cost per test on old plan, \$5.13 each.

Cost per test on new plan, 5.06 each.

You will note that the cost per test is very nearly equal under each plan, but a very considerable saving is made in the number of tests required.

The above does not include the tests on foods, which require analytical test, as these are sent to the Pure Food and Drug Laboratory at Berkeley at a total cost to this office of \$320 for the biennium.

COMPARISON OF PRICES PAID WITH MARKETS.

Comparison of prices paid by the purchasing agent on some staple commodities, with the quoted jobbing price on the same kind and quality of merchandise at time of purchase, will give some idea as to whether the Purchasing Agent is securing an advantageous price as compared to the prices at which the wholesalers sell to the retail merchants. Our purchases for the most part are made every three months for the quarter's supply, hence these comparisons are shown quarterly. Note the difference between the total of market prices shown by footing of the first column under each quarter and the total of unit price paid by the state, shown by footing of second column under each quarter.

This comparison also gives you an idea of the fluctuation on these standard commodities during the two years. You will note that the markets have been very steady, showing that the prices for the past two years have been normal, and denoting that the business of the country has become entirely normal again.

Market prices are the wholesale prices prevailing at the time of our purchase as taken from the wholesale paper dealers' catalogs, from which price has also been deducted all discounts applicable on account of quantity purchased. The market price shown is the lowest net wholesale price at which the paper was sold to the printing trade in the State of California.

STORES INCREASE.

During the past biennium, we have added to our stock of merchandise carried in our stores several new lines of materials, along the lines suggested in my last biennial report, as follows:

We carry a full line of staple paints, oils and colors; a line of paint brushes, shovels, hardwood tool handles, standard sizes of wire for electrical work, garden hose, bar soaps, such as white floating, brown laundry, toilet and castile; and there are still other lines that should be added as soon as we can secure the necessary space for handling. At present, all the available space we have is full to overflowing.

By buying paints, oils and colors in quantities to supply for several months at a time, we get the best price possible on the larger quantities. We are able to take advantage of the market at the proper time and purchase to advantage. We test our deliveries and know that we are getting materials of proper quality. We reduce the number of tests by at least two-thirds, and a considerable saving is made in cost of laboratory tests as a result. We have the correct material in stock ready for an immediate delivery when needed, thus avoiding expensive delays and waits by mechanics, and the results and incident saving have been very substantial and satisfactory.

By buying shovels, tool handles and electric wire in large quantities and stocking, we secure the quantity prices as well as prompt deliveries to the jobs at the various departments. In stocking garden hose, we are able to buy it from 10,000 to 20,000 feet at a time, securing lowest possible prices, frequently buying at 8 to 9 cents per foot a quality of hose that costs, when bought in small quantities as ordered by the departments, 12 to 15 cents per foot.

By buying bar soaps in lots of 100,000 to 150,000 pounds at a time, we save from 1 to 3 cents per pound, and save from 20 to 40 per cent in the quantity consumed by reason of having it properly cured and hardened before sending it out to the institutions.

Our great need is for more store space on the waterfront in San Francisco, in order that we might add other lines of standard tools and materials, which would not only enable us to secure quantity prices and discounts, but would enable us to standardize more fully the material used in all state activities. Our overhead would not be increased to any appreciable extent by increasing the line, but would enlarge the volume of business and increase the opportunity for increased savings.

A FEW NOTABLE SAMPLES OF SAVINGS MADE BECAUSE OF THE CENTRALIZING OF THE PURCHASING FUNCTION IN THE ONE OFFICE.

In the fall of 1923, through knowledge of conditions and information gleaned from the best authority, the Purchasing Agent became convinced that fuel oil had reached the lowest possible price, and that it was the proper time to enter into a year's contract for fuel oil for the state institutions, rather than buy in quarterly quantities as we had for some time been doing. On December 19, we received bids and entered into contract for one year's supply at an average price of \$1 per barrel, f. o. b. shipping point. There was an advance of 25 cents a barrel before the contract was signed, and in less than two months another

advance of 25 cents a barrel. As a result, we saved for the state 50 cents per barrel on approximately 250,000 barrels of oil, or \$125,000.

Sugar.—By reference to our comparative Table VII, showing comparison between prices paid by Purchasing Agent with market prices, you will note that market price on sugar is refinery price to jobber. You will note that every quarter we bought sugar at less than the refinery price. We were able to do this by watching the market, and by getting inside information as to probable trend, and also because of our revolving fund, we could buy at the right time and secure the lowest possible price by paying cash and taking the discounts. You will note that the prices we paid were all the way from 22 cents under the refinery price up to \$1.33 under, or an average for the eight quarters of 65 cents per bag of 100 pounds. The state uses an average of 2400 bags each quarter, or during the biennium 19,200 bags, and this quantity, at an average of 65 cents per bag under refinery price, shows a total saving of \$12,480 on sugar for the biennium.

Paints.—Twice, during the past year and a half, we bought, on advance information of a rise in price, 30 barrels of linseed oil. By using our revolving fund at an average saving of 8 cents per gallon on the two lots, totaling 60 barrels, or 3200 gallons, we made a total saving on the two lots of \$256.

Steel.—San Quentin prison used approximately 10,000 shuttle springs and 5000 protection rod springs for the jute mill in a year. For years, we have had difficulty in securing for them steel from which they could make the springs in their own shop. The total cost of the springs to them, exclusive of their own labor, was an average of 31 cents each, including tempering the finished spring, which had to be done by outside parties. We took it up with an eastern spring manufacturing company, with the result that we secured for them a completed spring costing, on an average for the two kinds, 12 cents each, delivered at the prison. They report that they are lasting longer and are more satisfactory than the old spring. This will show a saving in actual cost of 19 cents each on a probable 15,000 each year, or \$2,850, which saving will be increased by the decrease in number used by reason of longer life, as we have a letter from the prison estimating, after using the new spring, their yearly requirements at 5000 of the shuttles and 3000 of the protecting springs. The cost of a year's supply on the old plan was approximately \$4,650. A year's supply on the new plan would cost approximately \$960.

The Folsom state prison uses a considerable quantity of drill steel in their rock quarries. The cost of that steel had averaged 10 cents per pound. Sometime ago, we found a new source, bought a trial order at 6½ cents per pounds. The Folsom prison tried it out and found it just as satisfactory as the steel they had been using. The last two purchases, totaling 4500 pounds, was bought at 6½ cents, a saving of 3½ cents per pound, or \$157.50.

Clothing.—During the last two years, we have been able to purchase from various large clothing stores at clearing-out sales of their surplus stocks, approximately 400 men's and youths' suits of well known and popular makes. We paid from \$12.50 to \$15 each for suits

that the dealer sold at from \$30 to \$50 each, saving easily over jobber's prices an average of \$10 per suit, or \$4,000 on the lot.

We purchased for the Veterans' Home, 500 New York State National Guard uniforms, perfectly new, unsalable by New York on account of change in uniforms, at \$5 per suit, material and workmanship fully equal to the regular uniforms purchased at \$20 each. This was a saving of \$15 on a suit, or \$7,500 on the lot.

On account of change in the regular demand for 27-inch gingham by the general trade, we were able to purchase a 10,000-yard lot of gingham of desirable assorted patterns at 13 cents per yard from a jobber clearing up his surplus when the regular market was $17\frac{1}{2}$ cents per yard on the same goods, thus showing a saving of $4\frac{1}{2}$ cents a yard, or a total of \$450.

Shoes.—We learned of a lot of U. S. Army cap-toe trench shoes offered at a very low figure, new goods. We purchased 2500 pairs at \$1.97 $\frac{1}{2}$ per pair, delivered to our stores in the Ferry Building. These shoes could not be manufactured by our own institution at less than \$4 per pair. By using our revolving fund for this purchase, a saving of \$2 per pair was made, or a total of \$5,000 for the lot.

Stationery and office equipment.—In 1922, we had a quantity of account ledger paper of a quality generally used, offered by an eastern firm closing out their local stock in warehouse. The price paid for the same quality on open bid was 29 cents per pound. This lot we purchased for 16 cents per pound, making a saving of \$327.60 on the transaction.

In October, 1923, the Sutro Branch of the State Library was closed, and the library in the new San Francisco building had already been equipped and installed. The equipment consisted of general library furnishings, such as book stocks, tables, chairs, etc. A dealer offered for the lot, \$1,000. We advised against the disposal at the price, and had the equipment stored in the new State Building. We have since disposed of all of it, mostly to schools, etc., outside of state activities, and received for it a total of \$2,805, besides giving those who bought it an equipment for about one-half the cost of new, and no better equipment.

And so we could go on almost indefinitely with examples of savings made. Almost every day comes to us opportunities which we never fail to take advantage of, in which savings can be accomplished in matters of price on special offerings, or more suitable merchandise.

One of the most important duties of a Purchasing Agent, to my mind, is the direction of the attention of those in charge of the enterprise for which he purchases to more suitable material or equipment when it is available.

These examples are given to indicate some of the many ways in which the Purchasing Agent's organization of experts in various lines of merchandise may effect worthwhile savings by application.

OBSERVATIONS AND SUGGESTIONS.

In my opinion, all the labor possible now unused in the various institutions should be employed in the production of products used in various state requirements. This would not only tend toward saving in funds, but at the same time would be advantageous to the inmates.

Many states have found it to their advantage to make, at their penal institutions, their automobile license plates. The number of plates used in California the coming year will reach approximately 1,500,000. The contract price will be well along toward \$250,000 a year. To my mind, there should be provided at Folsom prison a plant for making the automobile license plates. They have the labor going to waste, and they are located admirably for the economic handling of the material and production of license plates, as well as other lines of metal work of that nature, such as highway signs, street signs, and all sorts of metal containers and equipment used in various state departments.

Blanket Authorization.

The amount of purchases made by various departments on blanket authorization is still entirely too much, and this privilege is used in very many instances for purchases that can in no wise be determined emergencies. I recommend that these amounts be cut down a very considerable extent. I also recommend that claim schedule covering such purchases be filed entirely separate and that they be not combined with claims for expense, traveling, etc.

Payment of Freights.

About a year ago, we changed our method of purchases to getting price f. o. b. shipping point, instead of f. o. b. institution's station, believing that this method would not only be a saving to the state but would also be more satisfactory to the bidder. During the first year we have filed fewer claims for refunds in freight than I had anticipated, showing that the transportation companies are figuring rates very carefully. A large part of the errors discovered, however, are corrected by the companies upon being called to their attention, and the expense bills corrected before they are paid by the institution. Then, too, by this method, we are paying the exact freight on the various commodities handled by the transportation companies, and not an estimated transportation cost added to the price of the goods. The general satisfaction expressed by the bidders with the new method is also an evidence of the wisdom of that method. This new method has not yet reached its full effectiveness and efficiency, as it takes time to make everyone connected with the handling of materials at the various institutions conversant with new regulations.

Store Rooms.

The Purchasing Department's storeroom facilities in the **Ferry** Building, San Francisco, should be increased very materially, in order that a wider range of standard and nonperishable supplies could be bought in larger quantities and distributed from the stores.

A number of the institutions have insufficient accommodations in their commissary and stores. Some of the institutions that have railroad switches serving them do not have their storeroom on that switch. In every instance, the store or commissary should be situated on the spur track or switch, where they have one, in order to prevent hauling and rehandling as much as possible, thus saving in expense and in damage to materials.

The Stockton State Hospital, Agnews State Hospital and Norwalk State Hospital are examples of this. All three are served by spur tracks, but in neither case is the storeroom situated on the spur track.

San Quentin prison certainly needs, very badly, a general commissary building on the waterfront, where *all* materials may be kept and stored and from where they may be distributed to the various activities of the institution.

Surplus Materials.

There should be kept, in conjunction with the stores department, preferably in San Francisco, a salvage department where all used equipment from the various institutions, especially in the northern part of the state, should be sent for reconditioning or sale. This, of course, would not apply to material commonly known as junk, as frequently junk can be disposed of to local junk dealers for more than could be realized in the central marketing place, by reason of the local freight rates applying. It does apply, however, to machinery and equipment of all kinds, as centralization of such equipment would be of easy access to the buyer looking for such material. In many cases, also, such material not needed by one institution or department, would be found useful to some other institution and save the price of a new equipment.

Surplus of Products.

When an institution has a surplus of any product, either produced on the farms of the various institutions, or manufactured by them, it should be listed with the Purchasing Agent in order that this surplus might be applied to the needs of some other institution or state activity that has sent in a request for the purchase of a like commodity.

I can not close this report without expressing my appreciation of the hearty cooperation of those in charge of the institutions and departments, the Board of Control, and the Director of Institutions, for the earnest consideration of suggestions I have made for improvements in methods of handling the great mass of business in the purchase and delivery of materials to state activities. The team work has been splendid.

The foregoing report, while necessarily condensed and cut down in every way possible, is sufficiently enlightening, I trust, to give you adequate information and evidence of some real accomplishments along the line of economy and efficiency in the state's business, carrying out our esteemed Governor's watchword.

I want to say, also, that whatever saving and improvements that have been accomplished could not have been made without the excellent cooperation and help of our whole office force, and in an especial way to my assistants in the various lines of commodity purchases, Mr. Misphey, Mr. Burton, Mr. Hobart, and Mr. Brudigan.

Respectfully submitted.

W. G. McMILLIN,
State Purchasing Agent.

LETTER OF TRANSMITTAL.

Sacramento, California,
September 1, 1924.

His Excellency, FRIEND WM. RICHARDSON,
Governor of the State of California,
Sacramento, California.

SIR: In fulfilment of legal stipulation, we hand you herewith a biennial report of the activities and accomplishments of the Board of Fish and Game Commissioners of the State of California and trust that it will meet with the approval of yourself and of the members of the legislature. As in the past, there will be found a summary of accomplishments, reports of the various departments and, in the appendix, a complete statistical statement.

Yours truly,

GEORGE NEALE,
Executive Officer.

TWENTY-EIGHTH BIENNIAL REPORT.

INTRODUCTION.

To properly administer the fish and game resources of a great state like California is at best a difficult undertaking. With forces of destruction to be fought at every turn, new problems arise daily. But with finances in a more settled condition, and with the confidence that the administration, the sportsman and the conservationist have given us, our burden has been lightened and our belief in the worthwhileness of conservation work constantly strengthened. With this review of accomplishments in which the perplexities are overshadowed by the final attainments, the Commission is ready to set its face toward the future with renewed energy and optimistic outlook.

PERSONNEL.

One change in the personnel of the Commission was occasioned on December 12, 1922, when George H. Anderson of San Jose was appointed a Fish and Game Commissioner to succeed Mr. E. L. Bosqui of San Francisco.

During the biennium death has claimed five valuable employees, two of them victims of accidental death: W. C. Fassett, superintendent of Fort Seward and Ukiah hatcheries; John J. Barnett,* Deputy Fish and Game Commissioner; James S. White,* Deputy Fish and Game Commissioner; S. L. N. Ellis, Deputy Fish and Game Commissioner; Earle Downing, assistant, Commercial Fisheries Department; Lloyd V. Evins, assistant, Department of Fish Culture; Mrs. Lulu Creasey, secretary to the executive officer.

FINANCES.

The decision of the Supreme Court of California in the recent case of *Board of Fish and Game Commissioners vs. Ray L. Riley, State Controller, etc.*, 67 Cal. Dec. 581, has had the effect of entirely relieving the very critical situation with respect to the funds and activities of the Fish and Game Commission owing to "frozen" funds in the state treasury.

This important case had its inception in the application on the part of the Fish and Game Commission to the Board of Control and to the Governor for permission to create a deficiency and to draw upon the special fish and game preservation fund in the state treasury for its payment. This action was taken in conformity with the provision of section 680 of the Political Code, which purported to authorize the Board of Control, with the approval of the Governor, to create such deficiency and to order the payment of claims arising therefrom out of whatever special funds were in the state treasury applicable to such uses. At the time this application was made the special fish and game preservation fund in the state treasury amounted to approximately the sum of \$280,000. The Board of Control passed an order in accord with such application and Governor Richardson approved the same, but the

State Controller, in order that he might be perfectly protected in his allowance of the claim thereupon presented by the Fish and Game Commission in accordance with said order, insisted upon a decision of the Supreme Court justifying and commanding such allowance. The Fish and Game Commission thereupon brought this proceeding before the Supreme Court seeking a writ of mandate to compel the State Controller to approve and allow its claim. The matter was presented to the Supreme Court *en banc* and the court handed down its decision thereon upon June 12, 1924.

The opinion which was written by Mr. Justice Richards and concurred in by all the members of the court reviews exhaustively the history of the creation of the special fund of the Fish and Game Commission and of the legislation relating to the use of said fund. It also reviews the several recent decisions of the Supreme Court interpreting and applying the provisions of the budget amendment and of the budget bill. It holds that section 680 of the Political Code has application to such cases of urgency as this and to the relief of self-supporting boards and commissions having special funds derived from fees, fines and collections and devoted to the particular activities of such boards and commissions. It is needless to say that the decision of the Supreme Court in this important case has given widespread satisfaction.

The sole support of the Fish and Game Commission's work is dependent upon licenses paid by hunters and anglers and by the fines imposed on violators. Although there has been some increase in the number of licenses sold in the past two years, yet funds are not adequate for necessary conservation work. A deficiency appropriation allowed by the Governor and State Board of Control prevented a serious handicap to the work pending a court decision which released the "frozen funds" of the Commission. A complete itemization of the income and expenditures will be found in the appendix.

Most states have found it necessary to increase the license fees to properly administer natural resources. California, even against pressure by the anglers of the state, has maintained its nominal license fee. However, the increasing demand for a greater output from the hatcheries and for better patrol makes it advisable to recommend a special license for deer and an increased angling license fee.

VALUE OF FISH AND GAME RESOURCES.

Following the present tendency to try and estimate the actual value of fish and game resources the following is offered. Nearly a half million hunting and angling licenses are issued annually. If each licensee spent an average of \$100 somewhere near \$50,000,000 is expended in the pursuit of fish and game. Add to this sum the \$25,000,000 valuation of the output of the commercial fisheries and we have a total of \$75,000,000. Cut this for safety to \$60,000,000 and we have a conservative estimate of the business created yearly because there is game and fish available to the sportsman, and fish resources in the sea. This business is well distributed throughout the state and there are few business men who do not profit therefrom. And this business has been built up on a "taxation by participation" license plan and is not supported by general taxation.

FIG. 2. California's Game Refuges in 1916. (See Fig. 3.)

LAW ENFORCEMENT.

That the wardens have been active in bringing the violator to justice is evidenced by the increased number of arrests. During the year 1923, 338 more arrests were made than during the previous year, and 457 more arrests were made in the past two years than in the previous biennium. An encouraging increase in the percentage of convictions, which exceeds 97 per cent, has been noticeable and \$17,428.25 more in fines went into the fish and game protective fund than in the year 1922. Violations of the deer laws and of the bag limit laws continue to bring the largest totals in fines.

There has been a laudable tendency on the part of judges to be less lenient with fish and game law violators, with the result that jail sentences and heavy fines were often given. In 1923-24, for the first time, the jail sentences amounted to more than 1500 days, reaching a total of 4565 days.

Material increase in the warden service commensurate with the large land and water areas of the state is urgently recommended.

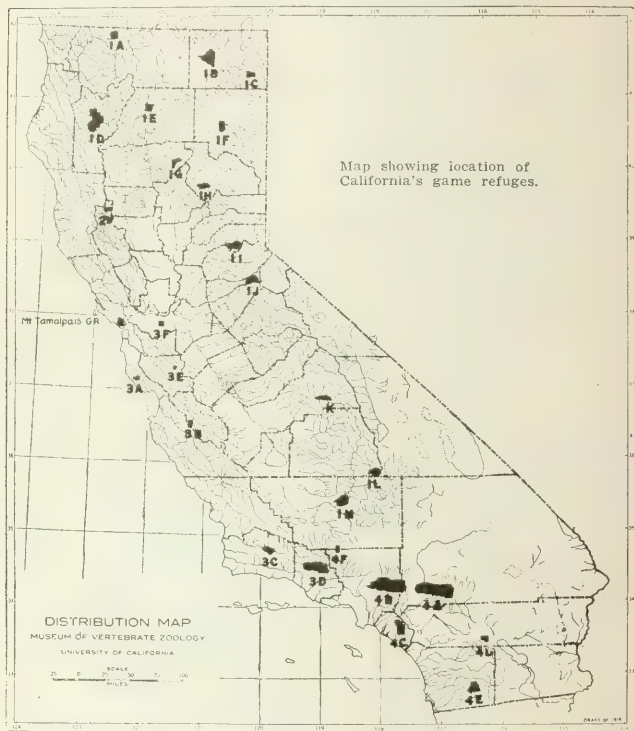

FIG. 3. California's Game Refuges in 1924. (See Fig. 2.)

A COMPARISON.

On the accompanying map will be found interesting comparisons as to the income, expenditures and activities of the various state fish and game commissions. Considering the area and the wild life resources of the state, the sum expended on patrol and on other work of the California Commission is not adequate. A comparison of the patrol expense per square mile of territory in all the states from which records were obtainable shows that California expends \$0.64 as against New York's \$6.60, Massachusetts' \$8.44, Wisconsin's \$2.60, Illinois' \$3.35 and Missouri's \$1.06. Even the Pacific coast states of Oregon and Washington show \$0.71 and \$1.13 respectively. Texas appears to spend less than all—but 3 cents per square mile of territory.

A map of the United States with various locations marked by dots and labeled with names such as 'MADRID', 'LONDON', 'PARIS', 'NEW YORK', 'SAN FRANCISCO', 'HONOLULU', 'PACIFIC OCEAN', 'ATLANTIC OCEAN', 'INDIAN OCEAN', 'AFRICA', 'ASIA', 'AUSTRALIA', 'ANTARCTICA', 'NORTH AMERICA', and 'SOUTH AMERICA'.

FISH CULTURE.

During the past two seasons the output of the state's hatcheries has been greater than that of any similar period since the beginning of fishcultural operations. The total trout fry planted reached 56,527,105, and of salmon fry, 35,495,550. All available hatcheries and egg-collecting stations were operated during the biennium. Work was handicapped at some of them because they are still operated under tents, pending the construction of permanent hatcheries.

With an ever growing demand for a larger output of fry, the fishcultural department looks with alarm at the possible destruction of the best source of egg supply left for the hatcheries in the state—the Klamath River. The building of a 250-foot dam can only mean the destruction of the run of king salmon and sea-run trout which has for several years furnished our state hatcheries with practically all of the salmon eggs and a large majority of the trout eggs. Proper stocking of the streams of the state is absolutely dependent upon the saving of the Klamath River as a fish reserve and the building of more hatcheries.

Worthwhile additions to the stock of fish in the state have been made. A quarter of a million cutthroat trout eggs from the Rocky Mountains were received, hatched, and planted in the streams of the northwest coast region. Eighty thousand eggs of the Mackinaw trout from the Great Lakes were obtained and resultant fry successfully planted in Clear and Eagle lakes. A fine, pure strain of Eastern brook trout was secured for the state through the exchange of a million Loch Leven eggs for a million eggs of this species with the New Jersey Fish and Game Commission.

Screen and ladder surveyors report difficulty in enforcing installation of fishways and of screens and, in many instances, legal proceedings have been necessary. Too often a dry year furnishes an excuse for not providing the fishway with sufficient water to make it usable. The idea seems to be prevalent that water for irrigation and power is more valuable than that used for saving fish life.

Recommendations include:

1. Legislation providing a sufficient flow of water in a stream to maintain fish life.
2. Better means to force installation of screens and fishways.
3. Increased financial support for the building of new hatcheries and the enlarging of the pond system.

COMMERCIAL FISHERIES.

The fisheries of the state have made a distinct recovery from the post-war slump. In both weight and value, the catches the past two years exceed those of 1920. The total pack at the canneries amounted to 1,981,027 cases in 1923 as against 831,232 cases in 1921. A notable increase in such fish products as smoked salmon, dried squid and salachini is indicated. Dried squid reached the quota of 99,000 pounds. Fish meal and fish oil, by-products of the canneries, also showed a notable increase—nearly 3000 tons in the case of fish meal between 1921 and 1923, and over 6,000,000 gallons in the case of fish oil. The total value of the catch shows an increase of more than eight and a half millions of dollars in the same period of time. In spite of the fact that the value of the plants decreased nearly a million and a half,

there was an increase in the number of those employed in the fisheries. A compilation showing the nativity of fishermen shows 1032 as citizens out of a total of 4123, with 106 unreported as to nativity. There was a decrease in the take of both albacore and salmon in 1923 over that in 1921. On the other hand, the take of barracuda, shad and mackerel was increased and sardines showed a gain of 170 per cent.

The most important problem confronting the Commercial Fisheries Department has been the regulation of the amount of sardines used by the reduction plants. The Fish Conservation Act has been found difficult to enforce and should be amended. The determination of "unavoidable" waste is exceedingly difficult. The amount of food fish to be utilized in making fish oil and fertilizer should be definitely stated in the law, a violation should be a high misdemeanor and the goods manufactured in violation of the law should be subject to seizure by the state.

Sentiment against the purse seine fishery appears to be based on the ancient objection that a new method or appliance upsets the old order of things. Investigation has shown that, properly regulated, this fishery is a worthwhile development and does not necessarily endanger the supply of food fishes concerned.

Striped bass and shad now have sufficient protection in that these species are given a closed season of two and one-half months. This law makes the season for striped bass the same as that for shad.

The salmon has had insufficient protection. A flaw in the law passed by the last legislature made it impossible to eliminate ocean trolling during the months when many immature fish are caught. Investigations have shown that ocean trolling for salmon causes the destruction of many immature fish and has shown exactly the season when mature fish are to be taken by this method. This fishery has constituted an added drain on the salmon supply and should be definitely restricted to a short season. Washington and Oregon have stopped both trolling and purse seine fishing for salmon and they urge this state to do likewise.

There is great need for an additional patrol boat for the northern section of the state. Although the south is cared for, no seagoing vessel is at present available in the northern part of the state for the enforcement of salmon and crab laws.

As a result of the salmon investigation it has been possible to fix accurately the times of year which should be closed to salmon fishing in the sea in order to prevent the destruction of immature fish. Extensive marking experiments have shown the range at sea of salmon and furnished knowledge of the age and rate of growth. Progress is reported on both the albacore and sardine investigations.

STATE FISHERIES LABORATORY.

Although handicapped by a loss of members of the staff, the State Fisheries Laboratory has been able to bring to completion the first part of the sardine investigation and to add valuable data in connection with the albacore investigation. Several members of the staff, being offered better positions, left the service. Their places have now been filled and, in addition, two assistants have been appointed under a

cooperative agreement with the Federal Bureau of Fisheries. Most of the staff is busily engaged in gathering statistics and in compiling them.

The main conclusions in the sardine work are as follows:

1. In order to have an accurate picture of the commercial catch, it is necessary to take samples at least twice a week.

2. Studies of fluctuation show this phenomenon to be due to one of two factors:

- (a) Presence of dominant age groups which may appear in cycles of several years.

- (b) Diminution due to relatively unsuccessful spawning. No regularity in this instance has been discovered.

3. Reliable forecasts of the commercial catch can be made as a result of statistical study.

4. From available statistics, overfishing can not be readily detected in time to prevent depletion.

5. Since sardines are the source of food for albacore, barracuda, sea bass and tuna, the effect of overfishing would be far-reaching.

Further study of the albacore emphasizes the fact that migrations are not concerned in the peculiarities of the fishery. So-called "runs" are not the result of migrations, but the result of schools already present which begin to take bait at the surface.

Studies have shown that albacore 21½ inches in length are just completing their second year; those averaging 27 inches in length are finishing their third year; and those 38 to 40 inches in length are in their eighth year or over.

The purse seine investigation, when completed, brought out some interesting facts. Up to 1915 there was but one purse seine boat; thereafter, five were in service, and by 1920, over 100 boats were being utilized in the fishery. Blue-fin tuna are taken only by the purse seine boats, and the winter supply of barracuda, yellow-tail, and white sea bass is largely dependent upon this part of the fishery. In fact, over one-half of the fish reaching the fresh fish markets of Los Angeles harbor is a product of this fishery.

Attention is called to the fact that the grunion, the life history of which was worked out by the laboratory, will sooner or later need protection as grunion fishing is a popular sport on the beaches of southern California.

This year will see added to the files the fifth successive annual statistical record of the daily catch. The total take by locality has been published quarterly. These statistics are more complete than those collected by any other government and will give a dependable comparison of abundance in successive years, a fundamental need in the proper development of fisheries. In addition, biological data as to the varying composition of the catch in regard to sex, size, and other features, has been assembled.

EDUCATION AND PUBLICITY.

The Department of Education and Publicity was very active during the past biennial period, as shown by the report submitted. Many more people were reached through the medium of lectures than in any previous biennium. The work in the summer resorts has proved par-

ticularly productive in the building of a favorable sentiment. Thousands of people are reached at a time when they are most susceptible to information on fish and game and, with emphasis placed on first-hand information, conservation ideas are easily instilled. Schools, boy scout organizations, men's service clubs and groups of every kind have been reached by means of lectures, motion picture displays and literature. The quarterly magazine, CALIFORNIA FISH AND GAME, has continued to carry to its readers reliable information regarding the activities of the Commission and the conservation program of the state. This publication is used regularly in high school classrooms and the call for it from the sportsmen who support the work of the Commission is continually growing. Wide publicity has been secured through the medium of newspapers and magazines.

STATE FAIR EXHIBIT.

Each year the Commission has made an attractive exhibit at the State Fair in Sacramento. The permanent exhibit comprises a great panorama of the Sierra with wonderful lighting effects to show dawn to daylight and sunset to night. Cloud effects and a thunder storm were very realistic. On those days when the attendance was the greatest a count showed 1500 persons, per hour, viewing the exhibit.

Aquaria contained the different species of trout and all fresh water fishes found in the Sacramento region. Golden trout from mountain lakes at an elevation of 10,000 feet, after a journey of nearly a thousand miles by pack train, truck and railroad, were on display. Baby trout just hatched from the eggs and baby salmon were to be seen in the small model hatchery.

Those who visit the State Fair can not help but be convinced of the extensive work being carried on by the Commission in caring for and conserving the fish and game resources of the state. The following letter expresses the appreciation of the directors of the State Fair.

CALIFORNIA

STATE AGRICULTURAL SOCIETY

Sacramento, Cal.

September 9, 1922.

California Fish and Game Commission,
Sacramento, Calif.
Gentlemen:

We, the Board of Directors of the California Agricultural Society, take this opportunity to thank you for the beautiful and educational display of the work of your commission made at the State Fair in 1922; particularly do we wish to commend the enterprise of the commission in placing such a large and comprehensive exhibit. We trust this has given the people of California an idea of the importance of the work of the Fish and Game Commission.

On every hand we have heard favorable comment upon your educational features and we sincerely hope that when the Fair opens next year you will be with us again with an equally attractive display.

Again thanking you and assuring you of our desire to cooperate with you in the years to come, we remain,

Sincerely yours,

STATE AGRICULTURAL SOCIETY,

H. A. JASTRO,

President.

WJM-IC

FIG. 4. Jay Bruce, State Lion Hunter starts on a trip. Photograph by Mrs. J. Bruce.

MOUNTAIN LION CONTROL.

During the past two years state lion hunter Jay Bruce, secured sixty lions of which 34 were males, and 26 females. Of this number fourteen were animals less than a year old. Many of the lions (49 in all) were taken in or near game refuges, localities which are worked consistently because of the direct relation to deer conservation. It is believed that the total average lion population of the state has been reduced about 100 as a result of the activities of the state lion hunter. Complaints of the depredations of bears have been consistently investigated but no reliable evidence has been obtained that stock had been killed by them. However, frequently there is evidence that bears have fed upon stock killed by other predatory animals than bears. A complete summation of the lion bounties paid will be found in the appendix.

FISH AND GAME PROTECTIVE ASSOCIATIONS.

The staunchest kind of support for conservation measures comes from the twenty or more fish and game protective associations of the state. Could this favorable sentiment be unified in one great state organization the sportsman's interests could be better cared for. The Commission has been glad to lend support to these organizations and to receive suggestions from them. A plan is being evolved to center all of these protective associations in a central organization to be known as the California Conservation League, in an attempt to crystallize sentiment and avoid duplication of effort.

FIG. 5. Whistling swans in rice fields near Richvale, Butte, County, California. January 19, 1924. Photographs by George Thompson.

GAME CONDITIONS.

At the last legislature the bill providing for a deer license and a one buck limit which was proposed as a means of giving better protection for deer failed of passage by reason of the belief that the money would revert to the general treasury instead of to the fish and game preservation fund. This legislation must eventually come if we give the one large species of game mammal left in the state, in sufficient numbers for hunting, proper protection. The mule deer of the lava beds in Modoc County particularly need protection as the toll now being taken is altogether too large.

An unusual problem presented itself during the winter of 1923 when large numbers of deer met death by falling into a cement power ditch on the American River near Placerville. Immediate action was taken with the result that more than 500 deer were safely rescued from the ditch and bridges allowed the safe crossing of more than 2800 others—all on a front of seven miles. The Western States Gas and Electric Company, owners of the ditch, cooperated in rescuing the deer and a fence which has been installed will prevent a similar occurrence another year.

FIG. 6. Lower Klamath Lake as it appeared in the spring of 1924, once a federal bird reservation and California's most extensive waterfowl breeding ground. Due to unwise drainage it is now but an alkali waste. Photograph by Blanche Shaw.

The closing of the season on tree squirrels by the 1923 legislature proved a benefit to a species greatly reduced in numbers by a serious epidemic of disease. A continuation of the closed season beyond the September, 1925, date would doubtless be advantageous.

Wildfowl conditions continue favorable. If breeding and feeding grounds can be maintained by developing an unfavorable sentiment toward the endless drainage projects the future looks bright.

FISH CONDITIONS.

The spring and summer of 1924 proved so dry that there was a consequent destruction of fish. Many streams that normally have plenty of water to support fish life dried up entirely, with resulting destruction of all fish life in them. Deputy fish and game commis-

sioners, forest officers and park rangers aided materially by transplanting fish from isolated pools to permanent streams. It will doubtless take several years to recoup from the depletion due to the past season.

Low water in the streams in many instances made fishways ineffective. With water several feet below the crest of a dam no water enters the fishway and migratory fishes are prevented from reaching their spawning ground. Too often thought of the conservation of fish life is obscured by the demand for electric energy. A whole stream is sometimes diverted from its course or the entire flow utilized in a power plant, leaving a dry stream bed and complete destruction of the fish life, a natural resource impossible to replace.

FIG. 7. One version of "Over the top." Steelhead trout jumping a waterfall in Trinity County. Photograph by C. O. Fisher.

Heretofore, power development has taken place high in the mountains with no serious loss of breeding grounds to migratory fish. The proposed building of a 250-foot dam near the mouth of the Klamath River with the consequent issuance of preliminary federal and state permits presented a very fundamental conservation problem. Since salmon have not been known to successfully negotiate more than a 40-foot fishway, it hardly seems probable that any method can be devised for carrying them over a 250-foot dam. It appears certain that the construction of such a dam would mean the ultimate destruction of the last unspoiled run of king salmon and steelhead trout left in the state. Furthermore, the proposed development on the Lower Klamath would mean the destruction of the best source of egg supply for the state's fish hatcheries. Almost the entire supply of salmon eggs is secured at Klamathon, and the best supply of trout eggs is secured at the four or five egg-collecting stations along this river. Practically every stream in the state, and most of the lakes, have been stocked with eggs secured from the Klamath River trout.

The Fish and Game Commission felt that it would be derelict of its duty if it did not champion the saving of the fish in the Klamath. It consistently fought the applications for permits and failing in this decided that the saving of the fish could be accomplished only by submitting the matter to the people through an initiative. Consequently, in the spring of 1924 the Commission aided in securing an initiative petition which finally went to the Secretary of State with the largest number of names ever turned in on a similar petition. As a result, the matter was referred to the people for a vote. The measure provided for a fish reserve which would be open to the angler and available for a source of eggs for the state's hatcheries, but be closed to the building of dams or other obstructions that would hinder the migration of fish. The saving of the fishery resources of the Klamath are largely dependent on a favorable vote on this measure.

PROBLEMS.

The main problems of the Fish and Game Commission are still to be summed up in three words: "pollution, drainage, and power dams."

In spite of useful laws and better public sentiment, the pollution of inland and coastal waters with oil still continues. It is hoped that the aid of federal legislation will help to improve conditions.

FIG. 8. One year's accumulation of illegal nets in the Sacramento District being destroyed by fire, March, 1924. Law provides for this mode of disposal of those nets having illegal mesh. Photograph by George Neale.

No better example of the danger attendant upon unwise drainage has been afforded than that of Lower Klamath Lake in the north-eastern corner of the state. This lake was in a federal bird reservation and here thousands of shore birds and waterfowl reared their young each year. The area was drained at an expense of \$300,000 and now it is discovered that the lake bed is wholly unfit for agriculture and residents and conservationists alike are pleading for a reflooding of the lake. It was only through decisive action that the

FIG. 9. Evening sees the wild deer come in to feed. Photograph taken near Gazelle, Siskiyou County, 1924, by William Lippincott.

draining of Lake Earl in Del Norte County was prevented. In many instances, lowered water tables nullify the expected valuable results of drainage. Marsh lands have real values and these values should be recognized before it is too late.

The diversion of water from rivers where trout have existed for ages into ditches for power and irrigation purposes have in many cases rendered streams almost barren of fish life. Also the draining of a number of lakes and storage reservoirs by the power and irrigation companies have caused the death of many thousands of trout and bass which it will take the Commission many years to restore. The extreme drouth has been the cause of the drying up of many streams and the consequent death of many fish.

The generosity of the Division of Water Rights in allocating the water of the streams and lakes without the least consideration of the needs of fish life and the overgrazing privileges given in the forests without due consideration of the needs of the wild life of the state are situations difficult to handle. Until such time as due consideration is given to the needs of wild life and less, perhaps, to the almighty dollar, California's wild life will continue to suffer. Legislation should be enacted that would conserve both feed for the deer and other wild mammals of the forest, and sufficient water in the streams and lakes to sustain fish life. Of what use are wardens to protect game that is starving or hatcheries to propagate fish which ultimately meet death because of a lack of water sufficient for their existence?

ACKNOWLEDGMENT.

During the war, the free transportation which had been furnished the Fishcultural Department for the distribution of fish was rescinded, causing a large additional item of expense. The railroads of the state have again generously granted the Hatchery Department transportation for employees and fish. The money thus saved the Commission in planting fish has been made available for the expense incident to a larger output in the state hatcheries. Grateful acknowledgment of the splendid assistance thus afforded by the various railroads of the state is hereby made.

REPORT OF DEPARTMENT OF FISH CULTURE.

*The Honorable Board of Fish and Game Commissioners,
State of California.*

SIRS: In conformity to the regulations of the Fish and Game Commission, I herewith transmit the report of the Department of Fish Culture for the biennium ending June 30, 1924.

During the seasons covered by this report, we have exceeded the output at our hatcheries over any similar period of fishcultural operations in this state by several millions of trout fry, having hatched and distributed during the seasons of 1922 and 1923, 56,527,105 trout fry besides 35,495,550 salmon fry. This record plus the trout fry on hand that are being distributed this season, will make the largest output of fry and the three greatest years in the history of the Commission's operations.

There were hatched and distributed during 1922 and 1923, 35,495,550 salmon fry. These were all collected at Klamathon egg-collecting station on the Klamath River in Siskiyou County. This take would have been exceeded by ten millions of eggs if our racks had not been flooded by the California-Oregon Power Company at the height of the season, during the month of October, 1923. A more detailed account of this will be given further on in our report.

During the biennial period just past, the same number of egg-collecting stations and hatcheries have been operated as mentioned in our last report. We have practically operated during this time thirty hatcheries and egg-collecting stations. Two of our stations are still operated under tents as the funds have not been available for the construction of permanent hatcheries. Had the funds been set aside from the amount available for fishcultural operations, the output of our hatcheries would have been greatly increased.

As in former years, two fish distributing cars have been used in distributing fry from Mount Shasta Hatchery, as well as from Mount Whitney Hatchery, to the different portions of the state that were not supplied from local hatcheries.

As stated in our last report, we can not emphasize the necessity stronger than to repeat that the streams are fished so hard that very few, if any, adult fish are left for breeders and consequently, the great majority of the fish that are found in them are the result of hatchery production. There is a demand for more hatcheries and a larger output of fry, but funds must be provided before any further

increase of fish from our hatcheries can be had or new hatcheries constructed. Several more hatcheries are needed in the state, not only to supply an ever-increasing demand for trout fry, but to save carrying the fish so far as they are now, particularly to the more remote parts of the state where the lakes and streams are situated far from the railroad. We are constantly giving instructions to persons applying for fish to make a wide distribution of the fry. The best results are obtained where the fry are well scattered and planted on the ripples and in the shallow water of the lakes some distance from shore.

The large output of our hatcheries did not more than half meet the demands of the applicants throughout the state as the demand for trout fry for stocking the rivers, lakes and streams of California is increasing annually. And with the increasing population of the state, and the popularity of California as a recreation center, the fishing in the mountainous sections where the majority of the people enjoy their vacations is so excessive that measures to increase the number of fry to be distributed each season must be arranged and a shorter open season established to allow the fish to attain a larger growth. Plans must be made for the construction and equipment of more hatcheries, building of pond-rearing systems and the improvement of the egg-collecting stations. The possibility of increasing the output of eggs from the Klamath River by the introduction of a larger number of rainbow and steelhead trout fry, as well as salmon fry, must be stressed so that this river may furnish eggs for the other hatcheries in California, where rainbow, steelhead and salmon are in great demand and where suitable waters are to be found for these species.

The number of hatcheries in the state should be increased as the demand for trout fry exceeds the limit of the present hatcheries. Lakes need to be set aside for the purpose of propagating brood stock from which the eggs can be collected, as well as pond-rearing systems where spawning fish can be reared for egg-collecting purposes. We have but the one egg-collecting pond system at Mount Shasta Hatchery and, to meet the demand of the angling public, the Commission should build one or two more systems equal in capacity to that at the Mount Shasta station. Mount Shasta Hatchery can not be enlarged as the water supply and land is limited to the present capacity of the station. Surveys should be made at an early date to find other suitable sites for pond-rearing systems for there is no method by which eggs can be more easily procured for propagating the exotic species of fishes than in pond-rearing systems.

The State Fish and Game Commission is making an effort to procure more funds to establish pond systems where exotic species of fish can be raised in numbers great enough to furnish at least two-thirds of the supply of eggs for the different hatcheries located throughout the state.

We have one of the best pond systems to be found anywhere at Mount Shasta station; but as stated in a previous report, it is not large enough to meet the growing demand for trout eggs. Approximately 30 per cent of the trout fry collected in California this season were taken from the pond system at Sisson at the average cost per thousand less than the cost of collecting wild eggs when the expense of constructing traps and other paraphernalia necessary in handling the spawners and the work of collecting eggs from wild fish is considered.

Outside of the Klamath River, Lake Tahoe, Bear Lake in San Bernardino County, and Plumas County stations, eggs can be procured from properly equipped ponds for less money than they can be from wild fish when the uncertainty of collecting eggs from wild fish is considered. The droughts, floods, deep snow and extremely cold weather conditions always make the egg-collecting work uncertain. We do not know from one season to another what to expect. During seasons of extremely light rain and snowfall, conditions prevail that are unfavorable for the collection of trout eggs. Other years floods and extremely high and cold water change the movements of the fish and the take of eggs is often far less than we expect. Breaking up of runs of trout in our streams by high dams built by hydro-electric companies and irrigation projects are all having their effect and, to meet these new conditions, the legislature should provide ample funds for the construction of rearing ponds where a sufficient number of breeding fish can be raised to supply the demand for at least two-thirds of the waters to be stocked.

Salmon, rainbow trout, and steelhead trout can be saved to the people for many years to come by the proper development of the Klamath River and the saving of this stream as a fish refuge. If this stream is lost to the public as an egg-collecting stream by the construction of high dams in the lower reaches of the river, it will mean a great loss to the general public. The expense of maintaining pond systems is costly and locations are hard to find where perfect conditions can be found for the rearing of a sufficient number of brood fish, particularly of the rainbow and steelhead species. The development of hydro-electric energy by the erection of high dams in the tributary streams of the Sacramento and San Joaquin rivers has materially reduced the number of salmon in the Sacramento and San Joaquin rivers and Monterey Bay regions. Practically all the salmon now to be found in the Sacramento and San Joaquin river basins and Monterey Bay region are the product of hatcheries at Battle Creek, Mill Creek and Klamath River stations. The number of salmon fry produced in the Klamath River stations has assisted greatly in keeping up the supply in the Sacramento River.

The larger portion of the salmon in the Klamath River are the Sacramento race of king salmon that were introduced into the Klamath River by the Fish and Game Commission in its salmon cultural operations during the years past. The native Klamath River salmon do not appear in any great numbers in the river in the last few years. Our fishcultural experts at the Klamathon station support the view that the large majority of the fish taken from the Klamath River at the Klamathon egg-collecting station are of the Sacramento race.

If the Klamath River is set aside as a fish refuge, by increasing the number of fry planted in this stream, a larger number of rainbow and steelhead eggs will be collected; and, as it is the only river of any consequence left in this state in which there is a run of king salmon to handle for artificial propagation, it is of great importance that this stream be saved as a fish refuge so that the state at all times may have, not only an adequate supply of salmon eggs to keep up the supply of salmon in the Sacramento River and Monterey Bay regions, but also furnish a large percentage of our rainbow and steelhead trout eggs

for distribution throughout the entire State of California. The construction of the proposed high dams in the lower reaches of the Klamath River will break up the run of these anadromous fishes so that the egg-collecting work on this river will soon be a thing of the past.

During the last two seasons, the experimental work on the South Fork of Eel River near Branscomb, where several traps were located and temporary egg-collecting stations established in an effort to collect a large number of steelhead trout eggs and sufficient number of salmon eggs to stock Eel River, has proved futile as the uncertainty of the flow of water in Eel River, caused by extremely low water in periods when the fish should be running, or great floods, has proved that the upper reaches of the South Fork of Eel River where our experiments have been carried on is not a suitable place to attempt to collect eggs of either salmon or steelhead trout. The lower reaches of Eel River are subject to such extreme conditions of water from the minimum to the maximum flow that it is not dependable. The lower reaches of the South Fork of Eel River, near Garberville, or in the vicinity of Lane's Redwood Park, probably would be a suitable site for the collection of steelhead trout eggs; but, until practical experiments have been made in attempting to collect these eggs, no positive statement can be made whether this work can be carried on successfully in Eel River or any of its tributaries, except the Cape Horn dam on the South Eel River, which is now badly affected by the water being held back by the Gravelly Valley Dam during the season of drought, thus preventing the fish from ascending this fork of the river to the egg-collecting station located on Cape Horn dam. During the season just past, the dam did

FIG. 10. A Klamath River king salmon. Photograph by H. C. Bryant.

not fill so as to spill over and, consequently, no fish reached the egg-collecting station this year, thus depriving us of several millions of steelhead eggs. A lease was obtained on Gravelly Valley dam from the Snow Mountain Water and Power Company, the owners of this project, with the intention, if conditions proved suitable, of having this lake set aside as a preserve from which a large number of rainbow might be raised for the purpose of collecting their eggs to stock the streams of the immediate vicinity as well as have a supply to be shipped out to other stations. But protests from the citizens of Lake County, and the refusal of the Forestry Service to grant the Commission a lease on the lands bordering on Lake Pillsbury or Gravelly Valley dam, have prevented this department from carrying out its plans. The citizens of Lake County protested on the grounds that the dam was of greater benefit to them as a fishing resort to the public than for an egg-collecting preserve for the Fish and Game Commission. As they are drawing off the water each season for power purposes and the water in this lake fluctuates to such a great extent, it is somewhat doubtful whether the lake would furnish anywhere near the number of eggs that we formerly collected in the river immediately below the dam before its construction; that is, the Snow Mountain egg-collecting station located at the lower dam owned by this company.

If these protests against our experimenting on this lake are removed, several years will have to elapse before it can be determined how many eggs the brood fish in this lake would produce. The number of eggs that may be collected from fish raised in dams that have fluctuating heads, is always uncertain; and it becomes more apparent, as we look over the great State of California for suitable places where spawn-fish may be obtained, that the Klamath River, the last stream in California that has not been seriously affected by the construction of high dams, should be left to furnish a sufficient number of eggs of rainbow and steelhead to supply the needs of the state in other waters, as well as to provide king salmon eggs to maintain a greater portion of the run in the Sacramento River and Monterey Bay regions; and that adequate pond systems should be constructed for the rearing of our introduced species of fish, such as Loch Leven, European brown trout and Eastern brook trout.

As the fight to prevent the construction of high dams in the Klamath River by the residents of Siskiyou County, sportsmen's organizations and our Commission, has not yet been decided, since the matter is pending before the Federal Power Commission and in the courts of the state, as well as being submitted by an initiative petition to the voters of the state so that they may express their opinion, we can not add anything more to the argument submitted in our last biennial report, but will publish excerpts from the same report so that the matter may be brought before the minds of the people of the value of the Klamath River as a fish refuge.

We reiterate that the great Klamath River should be kept free from dams so that a stock of trout and salmon can be depended upon from that source for many years to come. The Klamath River runs through a mountainous region from the Oregon line, where it enters California, to its mouth on the boundary line of Del Norte County and Humboldt County, where it flows into the ocean.

There is practically no tillable land where the waters of this stream could be used for irrigation. All the small areas of tillable land along this river could be irrigated by tributary streams. Applications have been made to construct large dams on this river for the purpose of developing hydro-electric energy. As there is enough water appropriated in the other river systems of California to furnish electric power for the development of the state for many years to come without destroying the salmon and other anadromous fishes of the Klamath River by the construction of dams impassable by these fish, the construction of high dams in the Klamath River should not be permitted.

We feel positive, from our investigations and knowledge of the habits of the salmon, that the king salmon (*Oncorhynchus tshawytscha*) and the silver salmon (*O. kisutch*) will not ascend a fishway over a dam where the elevation is over thirty or thirty-five feet. Our experience in this state, and the experience of the experts of the Bureau of Fisheries and fishculturists in Oregon and Washington, confirm this statement.

There is a great protest being made by the people of Oregon and the Bureau of Fisheries against the construction of a dam ninety feet in height across Priest Rapids on the Columbia River, which confirms our opinion stronger than ever, that where the people have a stream of such value as the Columbia or Klamath rivers, no high dams should ever be allowed to be constructed if the fishing interests are to be considered. The people are entitled to at least one stream in each state from which they can collect an adequate supply of both salmon and trout eggs to supply the depleted waters of other regions.

The statement made that the Fish and Game Commission is retarding the industrial growth and development of the state by opposing these high dams is, in our judgment, not a fact, as there is sufficient energy being developed in other streams of California, where it is possible to construct power plants, to furnish the entire northwestern part of the state without embarrassing the development of that region or any other portion of California.

FISH PROPAGATION.

Applicants, without exception, are reporting fine results from previous plantings of fry and are continuing making applications from year to year, thus keeping the streams as well stocked as the conditions will permit where the fishing is so excessive as it has been for the last few years. The zeal and enthusiasm shown by the applicants who, year after year make applications to stock their favorite streams and lakes, is evidence of the intense interest in the fishcultural work in this state. The growing interest in the propagation and planting of trout fry is the result of good returns that we are producing by the cooperation of the persons planting fish for the Fish and Game Commission.

The distribution of trout fry by the sportsmen's clubs, boards of supervisors, and other interested parties, continues with the same enthusiasm as in former years. The public spirited citizens in the different communities have devoted their energy and furnished their labor in seeing that the trout fry are properly distributed. Each season we find better results of this cooperation as the persons interested in trout planting become more familiar with the proper distribution of the fry.

Some sportsmen's clubs, assisted by the supervisors of the counties, have established resting pools at the end of the auto roads where the fry are deposited and given a few days' rest before being carried by pack animal to the more inaccessible lakes and streams in the higher altitudes. The Fresno County Sportsman's Club and the Madera Rod and Gun Club have built a number of these resting pools in the mountainous districts where they are making their distribution of fry and have obtained excellent results. This is very commendable work as it gives the fry a chance to recuperate before continuing the long journey to the lakes and streams that are not accessible by trucks or wagons and have to be reached by pack animals. These resting pools are of great benefit if the fry are not held in them too long. A great many persons have advocated the holding of trout fry until late in the fall in ponds and nurseries along the streams where they desire to have the fish distributed, believing that if the trout fry are held until they are a larger size than when received from the hatcheries, better results could be obtained. Our experience has led us to believe that this is not a fact; and when trout are confined in ponds or nurseries they generally become large, fat and domesticated, lose their wild instinct of natural preservation that they have when first taken from the hatchery and a greater number of them will be destroyed by natural enemies, if held until late in the fall or the following spring, than if liberated as soon as they are swimming up and in condition to plant directly from the hatchery.

There are probably some places where larger trout might be of benefit when planted than those taken from the hatchery, but these places are very remote and in general trout planting, our experience has demonstrated to us, the sooner the trout fry are planted, the better the results.

TROUT DISTRIBUTION.

The total distribution of trout fry from the different hatcheries in the state for the biennial period 1922-1924 was 56,527,105, consisting of the following species:

| | |
|---------------------|------------|
| Rainbow | 21,696,365 |
| Loch Leven | 10,876,350 |
| Steelhead | 13,011,300 |
| Eastern Brook | 5,106,550 |
| Large Lake | 2,119,950 |
| Black Spotted | 816,090 |
| Brown Trout | 2,564,550 |
| Cutthroat | 255,950 |
| Maekinaw | 80,000 |
| Total | 56,527,105 |

On the date this report is being written, July, 1924, we have approximately 28,000,000 trout fry that will be distributed as a result of this season's operations.

SALMON.

To maintain even a fair supply of chinook, or king, salmon in the Sacramento River, Klamath River and Monterey Bay regions, as well as Eel River and ocean areas fed by this stream, becomes a greater problem each year. With the cutting off of natural spawning grounds by high dams in the tributaries of the Sacramento River and the depletion of Eel River by the excessive fishing of a few years ago, the

supply of salmon eggs to a great extent must be supplied from the Klamath River. During the seasons of 1922 and 1923, owing to the low water and seasonal conditions, the Bureau of Fisheries at Battle Creek and Mill Creek did not have any surplus eggs to furnish any of the California Fish and Game Commission's stations.

During the fall of 1921 there were collected at Klamathon egg-collecting station on the Klamath River 19,178,000 eggs. These were hatched and the resulting fry distributed as follows:

| | |
|--|------------|
| Sent to Fort Seward, fall of 1921----- | 2,000,000 |
| Planted in the Sacramento River, 1922----- | 7,311,000 |
| Planted in Fall Creek, spring, 1922----- | 2,331,000 |
| | <hr/> |
| Planted in Klamath River, fall, 1922----- | 11,642,000 |
| Planted in Fall Creek, fall of 1922----- | 5,000,000 |
| | 1,000,000 |
| | <hr/> |
| | 17,642,000 |

During the fall of 1922 there were collected at Klamathon egg-collecting station on the Klamath River 20,824,000 eggs. These were hatched and the resulting fry distributed as follows:

| | |
|-----------------------------------|------------|
| Sent to Fort Seward Hatchery----- | 2,250,000 |
| Planted in Sacramento River----- | 12,089,000 |
| Planted in Del Norte County----- | 40,000 |
| Planted in Fall Creek----- | 3,550,000 |
| | <hr/> |
| | 17,929,000 |

The season of 1923 opened very propitiously for the collection of chinook salmon on the Klamath River. The opinion of our superintendent, Mr. G. H. Lambson, and his assistants, was that an equal number of eggs would have been taken, if not a greater number, than during the season of 1922, but, during the fore part of October when the pools were full of salmon between the racks and ready to be spawned and their eggs ready to be collected for our hatcheries, the California-Oregon Power Company opened their sluice gates on the big Copco Dam without giving our employees any warning of the danger that threatened our racks at Klamathon, and caused a great flood of water to descend the river which overflowed the racks and choked them up with debris, logs, brush and other detritus so that the spawning salmon escaped up the river, and, as the tributary streams between the racks and the Copoe Dam were too low for any considerable number of these salmon to spawn, a great number of the eggs carried by these spawners was lost in the river between Klamathon racks and the Copco Dam.

The Company's attention was called to this damage and they agreed not to open their flood gates again without giving the Commission due notice, and at no time to open them to such an extent as to cause damage to our egg-collecting station. This damage to the season's work is to be regretted as every salmon egg that can be collected and hatched is necessary to maintain even a fair supply of salmon in our rivers and ocean area.

During the fall of 1923, 4,041,000 salmon eggs were collected, 250,000 of which were sent to Fort Seward Hatchery for distribution in Eel River. The remainder will be held in the ponds and planted this fall, the statistical report for which will not appear until the next biennial report of the Commission.

For years we have called the attention of the public and the legislature to the rapidly decreasing salmon supply in California with recommendations given in former reports, but, to date, no particular effort has been made to save this valuable fish from being greatly depleted, if not practically exterminated.

In a last effort to save this valuable fish to the people, the Fish and Game Commission, assisted by the people of Siskiyou County, and other districts, initiated a petition to submit to the voters on the November, 1924, ballot the decision whether we are to lose the Klamath River, the last stream that is not affected by high dams, and from which salmon eggs can be collected in any considerable numbers. The upper reaches of Eel River have been cut off by high dams and the uncertainty of the flow of water in Eel River caused by the great extreme between the maximum and minimum flow of the river makes Eel River one that cannot be depended on as a salmon egg-collecting stream; therefore, our efforts must be confined to saving the Klamath River as an egg-collecting stream for king salmon as we do not desire to see this valuable food fish practically exterminated in this state in the next few years.

We refer again to the closing sentence in our report on king salmon in the biennial report of 1920-1922: "The Fish and Game Commission is waging an uphill fight when it comes to conservation as the people do not realize the destruction of wild life until it is too late." Recommendations to conserve our fish and to increase the output of our hatcheries by practical and scientific methods go unheeded.

We can do nothing but reiterate the above sentence as practically the same condition prevails today as two years ago regarding the practical measures to save the fish in the Klamath River, with the exception that the measure will come before the people for their consideration. If they do not desire to see this valuable food fish practically exterminated, they will have a chance to prove it at the November election.

MOUNT SHASTA HATCHERY.

The high standard of work at Mount Shasta Hatchery has been maintained during the season of 1922 and 1923 the same as it has since the establishment of this station. Mount Shasta Hatchery has been operated to its full capacity during this period and 24,440,000 salmon fry and 27,994,450 trout fry were hatched and distributed from this station. This is one of the best equipped stations in the country, but it has practically reached its capacity for pond culture and for increased hatchery operations as we have not sufficient water or land to increase the capacity of this station. Therefore, pond systems must be established, as previously mentioned in this report, to enable us to collect a larger number of trout eggs to supply the other hatcheries now in existence and those that are to be established.

There were collected from the ponds at Mount Shasta Hatchery during the season of 1922-1923, 18,428,000 trout eggs. This number, with the additional eggs from outside stations, gave us a grand total of 27,994,450 fry to be distributed throughout the state.

The more important improvements made at this station since June 30, 1922, are as follows:

A concrete settling tank, which is also used for the diversion of water to the different hatcheries, was constructed, the dimensions of which

are 36 feet long, 8 feet 10 inches wide, and 5 feet deep, with walls 8 inches in thickness, and concrete foundation.

A new flume, 250 feet long and 14 inches by 16 inches, was built from the main supply ditch to hatcheries C and D. A number of the ponds were relined with new plank and inlets and outlets to six of the ponds were renewed. The ditch was enlarged west of the hatchery ground to make an additional fry pond. New screens were installed in all the hatchery troughs during the period covered by this report. Drain pipes were placed under the roads in front of Hatchery A. A new drain from Hatchery A to Pond No. 8 was installed. A new room was built in the attic of the foreman's dwelling and other improvements to keep the station in repair, but just enough repair work was done to prevent damage to the system of ponds and hatcheries so that they could be operated.

A number of improvements recommended to be constructed during the coming biennial period are as follows:

A new food preparation room, refrigerating plant and cold storage rooms for keeping the fish food in good condition. A new building should be constructed to be used as a storage room for fish cans and a paint room. This should have a steam boiler installed for steaming the cans, keeping them sanitary, something essential to keep the fish in good condition.

One new corrugated drain pipe to take water from Hatchery A. One galvanized drain to cross the road under the lane in front of Hatchery A, as the present culvert is in bad condition.

All the ponds, except two, should be relined with planking, in whole or in part. The planking on these old ponds and walls should be renewed, as they have been in use from 15 to 25 years. The superintendent's and foreman's cottages should be repaired; a concrete bridge constructed over the inlet of pond system on the road leading across the hatchery ground to barns and garage. These are only a few of the many improvements that are necessary to keep this important station in repair.

An additional water supply should be furnished to this station if it is to be operated to its fullest capacity, as the drought has affected it several times in the past; also, the water owners are using water from Spring Creek, from which this station receives its water supply, and take their usual amount regardless of the seasonal conditions, and the hatchery suffers accordingly. When the irrigation period was on this spring, the farmers diverted so much water that there were times when the fish in the hatchery, as well as in the ponds, were in danger of suffering materially, if not perishing, for want of sufficient water supply. A meeting was called at Sisson on May 20, 1924, and the water users diverting water above Mount Shasta Hatchery agreed to turn back from their ditches sufficient water to maintain the hatchery until seasonal conditions would bring about a larger flow in Spring Creek. This we greatly appreciated, as it prevented serious loss and damage to the fish at Mount Shasta Hatchery.

The auxiliary stations under the supervision of Mount Shasta Hatchery were operated during the last biennial period to their fullest capacity. These stations are Fall Creek Hatchery, Klamathon egg-collecting station, Hornbrook egg-collecting station, Bogus Creek egg-collecting station, and Camp Creek egg-collecting station.

KLAMATHON EGG-COLLECTING STATION.

There have been no improvements made at this station during the last two years other than the necessary repairs to keep the racks, traps, and station generally in condition for the catching of salmon and the taking of their eggs. There will be no improvements required at this station for the next two years. There were collected at this station 26,586,000 chinook salmon eggs, as follows: In the fall of 1922, 20,824,000; in the fall of 1923, 5,762,000. This take would have been at least ten million greater if it had not been for the disastrous flood that came down the river caused by the opening of the gates of the big Copco Dam.

FALL CREEK HATCHERY.

This station continues to be successfully operated. Since our last biennial report no improvements worthy of mention have been made; but recommendations for improvements are necessary at this time, as the hatchery troughs that were installed in this hatchery in 1918, at the time of its construction by the California-Oregon Power Company, were of poor material, being mostly soft pine which has decayed and become spongy to such an extent that we do not consider them any longer safe for the rearing of fish. We recommend the placing of an entirely new set of troughs in the Fall Creek Hatchery, made of a well-seasoned redwood; a new flume from the settling tank to the hatchery; a new floor in the hatchery, as the old floor has become badly rotted, owing to the leakage of these poorly constructed troughs; and the painting of the interior of the building. As the interior of this building has never been painted, the ceilings and walls are deteriorating very rapidly. The construction of another salmon-rearing pond is also recommended at this station so that a greater number of salmon fry can be held until the proper time for distribution.

HORNBROOK EGG-COLLECTING STATION.

There have been no improvements since 1922 at this station and there will be none for the next two years. The take of eggs at this station was below the average, owing to the prevailing drought for the last two years. The total number of eggs taken were 3,733,000.

BOGUS CREEK EGG-COLLECTING STATION.

This station was well repaired two years ago and no improvements will be necessary for the next two years except the extension of a concrete apron under the racks. The take of eggs at this station was approximately the same as normal for the last two years, as the drought did not affect these streams as greatly as it did Hornbrook Station. The take of eggs for the last two years was: In 1922, 4,336,000; and in 1923, 2,495,000.

CAMP CREEK EGG-COLLECTING STATION.

This station has not required any improvements for the last two years and none will be needed for several years. This station continues to furnish a large supply of rainbow trout eggs and will be one of our best stations until the seasonal rainfall is normal. The total take of eggs for the last two years was: In 1922, 2,356,000; and in 1923, 2,102,000.

MOUNT WHITNEY HATCHERY.

Mount Whitney Hatchery has been operated to its full capacity during the last biennial period, and we would respectfully recommend that a new hatchery of equal capacity be established on the Mount Whitney grounds, or a new station established in the Mono-Alpine region, so that a greater number of trout fry could be produced in this section of the state. There are also several possible sites on other streams in the Owens River Valley, but the Los Angeles aqueduct has taken over the greater portion of these, so it is doubtful if sufficient water could be obtained for the installation of another hatchery in this section. The increasing demands for fish in southern California and the region consisting of Inyo, Mono and Alpine counties, must be supplied from a source where eggs can be hatched and the fry distributed within the shortest distance for transportation. In all probability, we will be able to recommend to the board within the next year the selection of a site in either Mono or Alpine counties where a hatchery could be established that would relieve the heavy demand on the Mount Whitney Hatchery, thus allowing the output of this hatchery to be shipped to southern California.

During the spring of 1923, meetings were held in Independence with the other users of the water from Oak Creek, from which is obtained our supply of water for Mount Whitney Hatchery, and an amicable adjustment was made of the amount of water to be used at this station for the propagation and rearing of fish, as well as the amount to be used on the lawns and flower beds. Mr. Gordon Zander, of the Division of Water Rights, kindly assisted in bringing about this adjustment. The amount of water for the use of the hatchery grounds, lawns, and flower beds, was measured and the amount determined that the state should use for this purpose, which was agreeable to the other users of water from Oak Creek.

COTTONWOOD LAKES STATION.

This station was last operated in 1920. Owing to the large take of eggs which filled our hatcheries to their capacity during 1921, 1922 and 1923, the Cottonwood Lakes Station was not operated. In the spring of 1924, at the request of a number of prominent sportsmen in southern California, we planned to open this station for the collection of golden trout eggs for distribution in barren lakes, and, also, in some of the lakes in which golden trout had been introduced several years ago in the Mono-Alpine region, and in which they are now thriving wonderfully well. Upon the arrival of our crews at this station at the time the golden trout are usually entering the tributary streams of these lakes to spawn, our men found these streams practically dry owing to the extreme drought which has prevailed over the entire coast. The traps were installed in the creek flowing between the upper and lower lakes and 460,000 golden trout eggs were collected. These were hatched and will be distributed in the lakes suitable for this species of fish this coming fall.

RAE LAKES STATION.

The Rae Lakes egg-collecting station was not operated during the spring of 1922; but, owing to the shortage of eggs at other stations, was operated again during the spring of 1924 and the 410,000 eggs collected were transferred to the Mount Whitney Hatchery and the resulting fry will be distributed from that station.

TAHOE HATCHERY.

The new Tahoe Hatchery building was completed during the fall of 1920; but since then we have not been able to construct the foreman's cottage, food preparation room and other outbuildings, or improve the grounds as they should be to be in keeping with this fine station. This we hope to be able to do within the next year. The water system furnishing the water supply to this hatchery should be remodeled and open flumes constructed from the springs to the settling tanks, as well as ponds for a considerable area around the springs from which this water supply has its source, in order that the water will be more fully aerated and given a chance to reach a higher temperature. The water in these springs is very cold and conducting it through pipes does not give the sun's rays a chance to warm the water to the proper temperature for rapid development of trout fry. The water is very pure and cold and the fry do remarkably well, but their growth is retarded by the low temperature of the water. We deem it advisable to have open flumes with ripples so arranged that the water will receive a higher degree of aeration than is possible in passing it through the pipes, as well as giving it the benefit of the sun to raise the temperature.

There were produced from this hatchery during the last two years 2,935,000 trout fry, as follows: In 1922, 975,000 rainbow trout, 480,000 black spotted trout, 100,000 steelhead trout, and 145,000 large lake trout; and in 1923, 445,000 steelhead trout and 790,000 large lake trout.

MOUNT TALLAC HATCHERY.

This station has been operated during the last two seasons under the same conditions that have prevailed during former years. We are always compelled to plant the fry quite early owing to the rise in temperature of the water in Fallen Leaf Lake, from which this hatchery receives its supply. After the warm weather sets in the temperature rises and the water moulds and algal growths have a deleterious effect on the fish, which necessitates planting earlier than we otherwise would. However, the fish are planted in good condition and, as the water is warmer from the beginning of the season than it is at some of the other stations, the fish attain a good growth by the middle of July, so at that time they can be planted and good results expected. We would recommend the installation of a new floor in this hatchery, as well as an entire new set of troughs and distributing tanks and other fixtures incident to the hatchery equipment. The old equipment is now so badly decayed that it is not safe for any further use in the rearing of fish. This work should be done during this coming fall as soon as the trout fry are out of the building.

Traps were operated in Blackwood Creek, Ward Creek and Taylor Creek during the seasons of 1922 and 1923 and eggs collected as follows:

| | |
|----------------------------|-----------|
| In 1922—Taylor Creek | 205,000 |
| Blackwood Creek | 215,000 |
| Ward Creek | 180,000 |
| | <hr/> |
| | 600,000 |
| In 1923—Taylor Creek | 515,000 |
| Blackwood Creek | 590,000 |
| Ward Creek | 640,000 |
| | <hr/> |
| | 1,745,000 |

To insure the safety of these traps during seasons of heavy snow fall when the melting snow causes flood conditions, concrete toe walls should be constructed across the beds of these creeks, as well as concrete cribs placed in the streams to support the chords in the trap frame. This would insure us against any accidents which might be caused by flood waters in these creeks.

UPPER TRUCKEE RIVER EGG-COLLECTING STATION.

The same condition prevails at the Upper Truckee River egg-collecting station, and this station should be improved by a concrete abutment on the side of the creek, as well as cribs and concrete toe walls or aprons across the creek bed to prevent the traps from washing out when streams again are normal, thus insuring the safety of all of these traps. There were collected from this station 200,000 eggs during 1922.

UKIAH HATCHERY.

During the season of 1922 this hatchery was operated to its capacity, but no improvements were made until the winter of 1922-23 as it was necessary to procure a new lease on this property from the town of Ukiah. After procuring a lease for a period of five years from the trustees of the town of Ukiah, beginning January 21, 1924, we made repairs to this hatchery. This property was received from the Northwestern Pacific Railroad Company many years ago when the railroad company, in conjunction with the Fish and Game Commission, operated this hatchery for a number of years. Since the railroad company ceased to operate this hatchery it has been operated by the Fish and Game Commission under a lease from the town of Ukiah. No great amount of money was expended on the repairs—just enough to keep the station in good condition. A new pipe line was installed to furnish the water supply, as the amount of water at this station is limited and any leakage from the old flume caused considerable damage to the hatchery operations. During the spring of 1924, owing to the shortage of water, a limited number of eggs had to be placed in this station, and, as the drought prevailed through the sections that are usually planted from this hatchery, some fry were hatched to supply all of the streams in this section and an early distribution made. The following number of fry were hatched during the last two years: In 1922, 962,500; and in 1923, 1,015,000.

SNOW MOUNTAIN STATION.

At this station 1,594,000 eggs were collected in 1922 and 2,857,960 in 1923, and the resulting fry hatched in the Ukiah hatchery and other stations of the Commission. Owing to the shortage of water in the South Eel River during the season of 1924, the station was not operated. Preparations were made during the winter to operate this station the same as in former years, but the Gravelly Valley Dam held back the water in the South Eel River, thus preventing a sufficient flow of water to reach the Cape Horn Dam, at which place the Snow Mountain egg-collecting station is located. There was not sufficient water passing this dam at any time to enable the steelhead trout to ascend this branch of the Eel River so the eggs could be collected. The drought that prevailed throughout this region was probably greater

than in any other area of equal proportion in the state, considering the rainfall that usually prevails in this section. The main Eel River was very low all through the winter and spring and very few steelhead ascended as far as Dos Rios, and as this is at the junction of the South Eel and the middle fork of the Eel, the water in each branch was lower than the points below, so that very few fish entered either the South Eel or the Middle Eel and none reached the egg-collecting station as no water passed Cape Horn Dam during the period the fish were ascending the river.

FORT SEWARD HATCHERY.

This station has been successfully operated during the last two seasons. The fry produced have been fine, vigorous specimens of fish, showing good care and skillful handling of eggs and fry at this station, which is a difficult station to operate, owing to the uncertainty of the water during periods of drought. No great improvements have been made during the last two years, but we recommend that the following improvements be made this coming fall as soon as the trout fry are distributed: Sixty new standard troughs to be installed in place of the old shallow troughs that have been in use a great many years (the sixty old troughs were shipped from Price Creek Hatchery which was abandoned in 1916 and installed in the Fort Seward Hatchery after they had given service at Price Creek Hatchery for a period of fifteen or sixteen years). These troughs are now so decayed and spongy that they are no longer safe for the rearing of fish. New underpinning for the troughs; new distributing tank; waste flume; repairs for the old foundation of the hatchery; new settling tank; new head box in Powers Creek pipe line; and a new floor in the hatchery aisle are all repairs necessary to be made this coming fall before the salmon eggs are ready for shipment to this station. As this hatchery must supply the trout fry for the region covering northern Mendocino County, Humboldt County, and western Trinity County, it is very essential that this station be kept in the best possible condition so an adequate number of fry can be hatched to supply the ever growing demand for fish in this section. This hatchery, like all others in California, during the season of 1924 did not turn out as many fish as in former seasons, owing to the drought which prevailed. The total number of fry distributed from this station during the two seasons just past is as follows:

| | |
|----------------|-----------|
| In 1922—Salmon | 1,997,430 |
| Rainbow trout | 294,280 |
| Steelhead | 425,000 |
| Black Spotted | 146,000 |
| Large Lake | 71,600 |
| Cutthroat | 99,600 |
| | 1,036,750 |
| In 1923—Salmon | 2,177,120 |
| Rainbow trout | 667,500 |
| Steelhead | 1,940,000 |
| Large Lake | 98,260 |
| Cutthroat | 156,260 |
| | 2,862,080 |

BROOKDALE HATCHERY.

All of the steelhead eggs collected at the Scott Creek Egg-Collecting Station were transferred as usual to this station during the last two years, and from there distributed to the other hatcheries and the usual number of fry hatched for Santa Cruz County. Owing to the increasing demand for water from Alba and Clear creeks, which supply the summer residents who have cottages at Brookdale, and the drought which has prevailed in this section, and other causes, we deem it advisable to buy an additional piece of land at Scott Creek station where the state already owns the ground where the egg-collecting station is located, and construct a new building to hatch the fry for the district comprising Santa Cruz, Monterey, Santa Clara and San Mateo counties. An ample supply of water can be obtained from Big Creek to operate a hatchery approximately twice the size of the Brookdale Hatchery, which is necessary to supply this section of the state. The fry can easily be distributed from this station to the railroad at Davenport, as well as by truck to the main line at Santa Cruz. The county board of supervisors of Santa Cruz County have rendered every assistance possible to make Brookdale Hatchery a success and are cooperating with us to secure a hatchery site on Big Creek for increasing the production of fry for that section of the state; and we hope by the time this report is published that we will have the site secured and be able to submit plans for the construction of a new hatchery on this proposed site. The hatchery at Brookdale is rapidly decaying, as the building is quite old and the troughs, tanks, and even the foundation would have to be rebuilt if the station is run longer than another season. We do not deem it advisable to construct a new station on the old site and recommend the construction of a new hatchery on Big Creek, a tributary of Scott Creek. The land held under lease at Brookdale could be held and the small ponds used for the rearing of trout fry when the surplus fry from the main station at Scott Creek would cause us to look for more room than the hatchery would furnish. The small ponds might be put to good use by the county in holding their fry until they were ready to make the distribution.

The total number of fry distributed from Brookdale during the seasons of 1922 and 1923 is as follows: In 1922, 859,000; and in 1923, 850,000.

SCOTT CREEK STATION.

This egg-collecting station has been holding its average up to the present time. The flow of water at this station has been interfered with by the appropriation of water from this stream by a Mr. Widemann, who filed an application with the Water Commission to divert a portion of the water from this stream for use on lands adjacent to Scott Creek. We protested the matter to the Division of Water Rights and are now awaiting an adjustment of the water supply which we desire to remain in this stream so that the fry will have ample water in which to maintain themselves during the summer months before descending to the ocean. This is very essential if Scott Creek is to be operated as an egg-collecting station and spawners, or adult fish, maintained in this stream. We are of the opinion that an amicable adjustment of the amount of water can be obtained and that there will not be any serious trouble with the pumping plants established by Mr. Widemann.

CLEAR CREEK HATCHERY.

The Clear Creek Hatchery and egg-collecting station has been successfully operated during the last two years. During the spring of 1922 we had the usual run of fish in Clear Creek, a tributary of the Hamilton branch of the Feather River, from which the fish come that furnish the eggs for this station. There was also a good run in 1923. There was a larger run of fish than usual in the Hamilton branch of the Feather River in the spring of 1924; but, owing to the low condition of the water in the Hamilton branch caused by the drought, and, also, by the diversion of the water by the Red River Lumber Company to their power plant, we had considerable difficulty in collecting eggs. However, 3,100,000 eggs were collected this spring (1924). During 1922, 1,683,000 eggs were collected and in 1923, 2,100,000 were collected, making a total for this station for the biennial period of 1922-23 of 3,783,000. A two-room cabin was built for the crew in the fall of 1923 and some additional troughs installed in the hatchery. Improvements were made to the traps and fish holding tanks. This hatchery should be enlarged as soon as funds are available as it is necessary to hatch a greater number of eggs to maintain the supply of fish in the streams and lakes of this region.

WARNER CREEK TRAP.

Owing to the exceedingly high water in Warner Creek, this station was not operated in the spring of 1923. During 1922 1,905,000 eggs were collected; and, owing to the low condition of the water in 1924, it was successfully operated and 2,892,000 eggs were collected. Improvements were made in the fall of 1923 at this station by repairing the traps and flume and adding sixteen feet to the fish holding tank. A small eyeing station of six or eight troughs should be installed at Warner Creek so as to hold the eggs until they are advanced far enough to ship to other stations. It is quite difficult in the early spring, when the snow is deep in this section, to transport the eggs from this station to Domingo Springs station where they are hatched. The mouth of the creek, where it has its confluence with Rice Creek, should be widened and a permanent crib installed so the racks can be moved to this point, a more suitable place than the place where they now are.

DOMINGO SPRINGS STATION.

This station has been in operation the last two years with its usual success. In the fall of 1923 a new flume was built to furnish the water supply for the hatchery and the fish-holding tank. As soon as funds are available, this station should also be enlarged so as to increase its capacity to at least double what it is at present as more fry are needed each year to supply the lakes and streams in all sections of the state wherever hatcheries are located. To properly handle the situation in this section, a permanent rack, or rolling dam, should be placed across the north fork of the river below the junction of Rice Creek and Warner Creek and a permanent station established. This would cost several thousand dollars, but the results that would be obtained would justify the expenditure as the work could all be concentrated at the one station and a great many more fish caught, and eggs procured that are now deposited on the spawning beds below Warner Creek and between the mouth of Warner Creek and Domingo Springs station.

These small traps and egg-collecting stations have been built because we did not have the funds to concentrate our work. The initial expense of installing the large stations was too great for the funds furnished our department. Whenever funds are available for this improvement work, the benefits to be derived from the establishment of permanent traps, larger stations, and better equipment, will result in a larger output of eggs for less cost per thousand after the initial expense of establishing the station has been made.

JOHNSVILLE EXPERIMENTAL HATCHERY.

The Johnsville Experimental Hatchery was operated for two seasons. Owing to the great depth of snow and the inconvenience of getting eggs to the station in early spring, it was deemed advisable to select a more favorable site. During the spring of 1922, when our men arrive on the ground to begin operations, the snow was from 12 to 15 feet deep on the level, with great masses on the slopes of the adjacent mountains, threatening to come down in the shape of an avalanche at any time. The work of shoveling out the snow and opening the station was an arduous one and fraught with great dangers. As soon as the distribution of the fry was over in the fall of 1922, arrangements were made to move the flume, tanks and other material to a new site located on the property of Mr. W. A. Adams, on Haskell Creek, a tributary of Sulphur Creek, near Clio, Plumas County, in a locality where the snow does not fall so deep, and several miles nearer the railroad than the site on Jamison Creek. In the spring of 1923, after procuring a lease from Mr. Adams for 25 years, a foundation was laid for the support of 40 hatchery troughs. The water at this new site was thoroughly tried out last season and during the spring of 1924. It proved to be of superior quality for the rearing of trout fry. We would recommend that a permanent hatchery building and station be established on this site, as it is the best site so far found anywhere in the immediate vicinity of the Western Pacific Railroad in the Feather River region. During the last two seasons 877,380 rainbow and 857,000 steelhead trout fry were distributed from this station in the lakes and streams of the Feather River district.

BEAR LAKE HATCHERY.

The Bear Lake Hatchery is situated in the San Bernadino Mountains, in San Bernardino County, at Green Spot Springs near the shores of Bear Lake, and, as usual, has been successfully operated during the last two seasons. During the season of 1922, 1,365,000 eggs were collected at the North Creek Egg-Collecting Station on Bear Lake and transferred to this station for hatching and distribution. It was also operated in the spring of 1923 with practically the same success as in the previous year and 1,100,000 eggs were collected. This spring (1924), owing to the light snow fall and the lowering of the lake by the water company, it was more difficult to procure the eggs than in former seasons; but there appear to be as many trout in the lake as at any time during the last five or six years. As mentioned in our report of 1920-22, black bass were thought to have been introduced in this lake, but we were somewhat in doubt at that time. The fact is now well established that thousands of this species of fish are in the waters of Bear Lake and are increasing annually as there is a great

abundance of food in the waters of Bear Lake—probably greater than in any other lake of equal area in the state—consisting of all native aquatic insects, as well as gammarus and minnows. There is an abundance of food to last for several years to come and the bass will not prey on the trout to any great extent until this supply of food is greatly reduced by the increasing numbers of bass. By holding our trout fry until late in the fall when the bass have left the shallows to return to deep water and become torpid, the trout fry can be released and will have a fair chance of maintaining themselves in goodly numbers for a great many years, or until such time as the bass have destroyed the abundant supply of insects and minnows and begin to devour their own young, as well as the trout. But until such time as this condition prevails, we shall continue the operation of Bear Lake Hatchery, as the trout fishing during the spring of 1924 was exceedingly good and promised to hold out during the entire season. As the period of the year during which bass will bite is very short, and as they do not furnish as good a game fish for the anglers as do the trout, and as there are so many lakes and streams in lower altitudes where the water is too warm and full of organic matter for trout to thrive, it is to be deplored that bass were ever introduced into this lake by thoughtless persons for reasons best known to themselves.

NORTH CREEK EGG-COLLECTING STATION.

This station is located on the shores of Bear Lake. During the last two years the bulk of the eggs furnished the Bear Lake Hatchery were collected at this station. The total number of eggs collected was 3,611,000. Of this number 1,150,000 were hatched and distributed from the troughs where they were hatched after the other eggs were eyed and shipped to the main hatchery at Green Spot Springs. Temporary repairs to the traps and tanks were made at this station in the spring of 1922, as they were damaged in the winter by the flood waters that came down North Creek. The repairs necessary to be made at this station to maintain it for several years longer are to repair the roof by replacing it with an iron roof; the general overhauling of the hatchery troughs; and improvements to the trap and tank system. This work should be done during this coming fall.

GROUT CREEK TRAP.

Grout Creek station was damaged in the spring of 1921, in fact, it was entirely washed out and carried down the stream. There has been no water in this creek since that time to justify the expenditure of any considerable sum of money to install a permanent trap; but, if there should be a heavy snowfall in the watershed of this creek, it may, in all probability, be well to install a permanent trap to catch the trout that ascend the stream during the spawning period. The stream rapidly subsides after the snow is through melting, and if the fish are not caught and the eggs collected, a great many of them, in fact, the largest percentage of them, perish on the sand flats at the mouth of this creek or are caught in the pools above the sand flats near the shores of the lake when the water recedes; therefore, it would justify the expense of installing a fairly good trap to catch these fish and collect their eggs and to prevent the loss of the breeders that are stranded when the water dries up in the stream.

METCALF CREEK TRAP.

This station is located on the shore of Bear Lake. During a season of normal rainfall this trap produces a fair number of eggs; but the take for the last two seasons was considerably less than in former years, owing to the small amount of water in the stream as well as to the blocking up of the mouth of the creek with sand bars. Considerable improvements can be made there to better the conditions at this small auxiliary station.

WAWONA HATCHERY.

Wawona Hatchery has been successfully operated during the last two seasons with the same good results as in former years. The total output of this hatchery during the biennial period of 1922-1924 was 389,300 steelhead and 498,200 rainbow trout fry. This station should be maintained as it is located on a site where it is easy to get the fry to the lakes and streams south and east of the Yosemite Valley. A cabin for the foreman should be built on the hatchery grounds this coming spring so that better protection could be given the plant during the time when the building is closed. Under the present arrangement, the foreman lives in a tent and the accommodations are not very good.

KAWEAH HATCHERY.

Kaweah Hatchery has been operated for the last five years under a tent and it is time that a permanent building be erected either on the present site or on a site in the Sequoia or General Grant National Parks. The improved roads, constructed since this hatchery site was first selected, cause us to believe that a more favorable site may be found in the Sequoia or General Grant National Parks; and a survey will be made in the near future to determine whether a better site may be selected. If the same can be found, recommendations will be made for the erection of a permanent hatchery in this section. If a new site can not be procured that affords better opportunities than the present site, we recommend that a permanent building be built on the present site. In the spring of 1923, to accommodate a larger output of fry, ten extra hatching troughs were installed in this hatchery, making twenty in all. This is not large enough to supply the district that is making requests for fish for Sequoia and General Grant National Parks, Tulare County, Tulare River, and lakes in the southern high Sierras. A hatchery with a capacity of at least sixty troughs should be built for this section. The total number of fry distributed from this station was as follows: In 1922, 435,000; and in 1923, 440,000.

BIOLOGICAL SURVEY OF LAKES AND STREAMS.

In an effort to improve the methods of stocking the barren lakes and streams of the high Sierra range, we recommend that a biological survey of the streams and lakes of the Sierra range be made and plans to stock this entire region be carried out as rapidly as money and fish can be had for this purpose. The region of the high Sierra range contains many thousands of lakes and streams that are barren of fish life. This region should be stocked with species of fish best adapted to the physical conditions of the streams and lakes as regards temperature, altitude and aquatic insect life. Many of the higher lakes of this region, particu-

larly the smaller ones, are residual glacial basins; and such should be stocked with a certain number of fry each season so that the people who are fishing these lakes will not have to depend on natural propagation, which is not feasible in some lakes as there are no tributary streams in which the fish may spawn, or springs welling up through the gravel near the shores in water not too deep for the fish to spawn. To determine the different species of trout best adapted to each individual lake, a biological survey should be made by some person specially trained for this kind of work.

The introduction of fish in these lakes without any scientific checking up of the physical conditions to determine the species best adapted to each lake would, in many instances, be a waste of time and money. After a survey of the physical conditions of these lakes is made, proper aquatic plants and insects should be introduced to improve the food supply for whatever species of trout is best adapted to each lake or stream where natural food is found to be lacking. The planting of trout fry in barren waters should be done under a system based upon a scientific survey of conditions necessary to get the best results when the fry are introduced. The planting of adult fish in small numbers in these lakes is not the best method of introducing fishes into barren waters. As said before, a great many of these lakes do not have proper spawning grounds for the species to be introduced, and, where such conditions exist, fry should be planted in sufficient numbers to insure fishing within a short period of time after the fish are introduced. Whenever, upon examination, it is found that the lakes do not contain proper spawning grounds, a certain number of fry should be introduced annually, or at least every couple of years, to maintain the supply in these lakes, depending on the number of anglers who visit these lakes each season.

An experienced fish planter, with a well equipped pack train, should have charge of the planting of fishes in these lakes after the biological survey is made. This would not entail a very great expense and many hundreds of now barren lakes could be made to furnish good fishing to those who care to enter the high Sierra range for their summer outings, as the rivers and lakes in the lower altitudes are being fished so excessively by the ever increasing population of this state, and, with the advent of the automobile, it becomes necessary to stock these barren lakes to meet the demand made upon our waters by the angling public. Therefore, we recommend that this work be taken up and continued until all of the accessible lakes and streams are stocked. This work should be done under the auspices of the Fish and Game Commission and carried on systematically until all of the barren lakes and streams are stocked with species of trout adapted to the conditions best suited for their development. Some of these lakes may allow the successful introduction of the Montana grayling. When this survey is completed, recommendations will be made to the board regarding the species that will thrive best in each lake or stream.

SCREEN SURVEYS AND INSPECTIONS OF POLLUTION OF INLAND WATERS.

During the last two years surveys of screens and fishways, and inspections of the same, have been carried on the same as in former years.

Two hundred fifty-three inspections of screens have been made and instructions given to the owners to repair, improve, or reinstall the same, where they have been removed from the ditches. One hundred forty-two surveys were made for screens, 82 being for new screens and 60 being resurveys where the time had elapsed for the installation of the screens and same had not been installed. Forty-one large rotary screen wheels were installed during the past year. The screen surveyor has investigated a great many plans for the impounding of sawdust and mineral refuse in many places throughout the state. In nearly every case where the streams have been polluted by persons, the nuisance was abated as soon as their attention was called to the law.

A number of the larger corporations have not complied with the screen law, and these cases are not in the hands of our legal department for court action. It is recommended that these cases be pushed to a speedy termination, as it is very important that all canals, ditches, and pipe lines, taking water from rivers or streams where fish have been planted or may exist, should be screened at as early a date as possible. The legal department should be given every assistance that our funds will allow in prosecuting offenders who will not cooperate with the Commission in installing properly designed screens. A number of the larger corporations feel that they do not have to abide by the law, claiming that the cost of the construction of the screens is of a great deal more importance than the fish destroyed by passing through their canals into irrigated areas and through power wheels.

The honorable C. J. Luttrell, of the superior court of Siskiyou County, issued an injunction against the Parker Cattle Company for not installing screens in accordance with the plans submitted by this department. As soon as the injunction was issued, the company got busy and installed the proper type of screen. This action of the superior court of Siskiyou County is highly commended and should be followed in other cases pending throughout the state, as the action of Judge Luttrell in issuing this injunction has established the fact that those diverting water from rivers and streams must comply with the law and thus preserve the fish life. In most instances this can be easily done at a nominal expense.

FISHWAYS.

Our fishway survey and inspection service has been actively engaged during the last two years in inspecting fishways and making surveys where deemed necessary for the installation of new fishways. Plans for a number of new fishways have been served on different companies and individuals owning and occupying dams, rivers, and streams, who have not complied with the law. These, also, have been referred to our legal department and court action will be necessary in a number of cases to force the owners to comply with the regulations. The same is true of a number of fishways in different parts of the state that have been built for a number of years; but, which, during periods of low water, such as has prevailed during the season of 1924, have not functioned.

A great many owners of water rights have refused to allow any water to pass through the fishways, closing them entirely in defiance of the law which provides that sufficient water must be allowed to pass through fishways at all times to keep in good condition any fish life that may exist below the dam, and that during the minimum flow of water in any river or stream sufficient water must be allowed to pass each dam, culvert, or waste gate to maintain fish life. This provision of the law has been disregarded by a great many persons and corporations who do not consider that the fish destroyed are equal in value to the value of the water for other purposes. Such a small amount of water is necessary to maintain fish life below these dams that this law should be enforced strictly. If the provisions of this law are not drastic enough to compel persons who are diverting water from our rivers and streams to allow sufficient water to remain in the beds of the streams to maintain fish life, the law should be amended by the next legislature so as to maintain fish life. This is only fair to the people who are interested in the preservation of fish and enjoy the fishing that these streams afford.

RECOMMENDATIONS REGARDING WATER LAW.

We have asked in several of our former reports for the cooperation of the Division of Water Rights, formerly the Water Commission, in not granting an appropriation of water from any stream unless a sufficient amount is allowed to remain to maintain fish life during the minimum flow. But these recommendations have been disregarded; and whether the Division of Water Rights is compelled to give all of the water to those asking for it in defiance of the rights of the people who have a right to the natural resources of this state, its fish and fishing waters, is not for this department to say. However, we respectfully recommend that some action be taken by our state legislature to investigate these conditions; and if, in their wisdom, they agree with our idea that sufficient water should be allowed to remain in the bed of every stream to maintain fish life during the minimum flow, and if the present laws are not stringent enough to meet the situation, laws should be enacted that will preserve to the people at least a small portion of the water flow that formerly existed in our streams, so that the fishing in many districts will not be entirely destroyed. If the rights of the people are to be protected, action must be taken by the legislature to make the penalties for the violation of laws pertaining to fishing and minimum flow of streams more drastic. In no instance, in our opinion, is it necessary to divert the entire flow of any stream, thereby causing the destruction of fish life below the diverting point. If a small amount of water is allowed to pass each dam it will maintain fish life during the period of minimum flow and fish could be kept alive until the period of normal flow. The greed of water users is well known; and they do not regard the rights of any other persons or those who have an interest in fishing.

A number of our lakes have been tapped and the water drawn below the natural level of the lake to such an extent that the fishing interests have been greatly interfered with. Consequently it is also recommended that a law be passed preventing the tapping of any natural lake below its outlet. If it is necessary to take a greater amount of water from any lake than the regular discharge of the lake through its outlet,

dams can be constructed and the water level raised to impound the surplus water. This practice of tapping the mountain lakes to increase the flow in the outlet streams for power and other purposes will soon cause considerable damage to our fishing streams. Those who are capitalizing the water for power can well afford to construct dams to raise the water, if it becomes necessary to hold back a surplus supply for the low water period, instead of tapping the lakes and thus causing damage to our fish life.

Many other recommendations could be made on the subject of the preservation of the fish for inland waters; but, until some action is taken to regulate those who are taking water from our streams, we do not deem it advisable to make any new recommendations regarding the conditions that are detrimental to the lakes and streams of our state containing fish life.

Respectfully submitted.

W. H. SHEBLEY,

In charge Department of Fish Culture.

REPORT OF THE DEPARTMENT OF COMMERCIAL FISHERIES.

The Honorable Board of Fish and Game Commissioners of the State of California.

SIRS: In our last biennial report we told of the decline in the volume of California's fisheries products during the years 1920 and 1921 after a phenomenal growth of our fisheries which reached its peak in the year 1919. The most rapid growth was in our sardine fisheries, located at Monterey, San Pedro and San Diego, and the main stimulus was the export demand caused by the Great War.

In 1919 the sardine catch in California exceeded 150,000,000 pounds, nearly all of which was put into pound oval cans, the great bulk being for export. With the slump in prices in 1920 coupled with the collapse of foreign exchange most of our sardine canners were soon in distress. There was an overproduction of canned sardines in this country and foreign countries could not pay a price which would give our canners a profit. It so happened there was a good demand for fish meal and fish oil—the by-products of the sardine canning industry—and that more of a profit could be made by using the sardines for reduction purposes than by putting them in cans for food. As practically every fish cannery in this state has a reduction plant for handling the fish offal from the canning operations, the canners were naturally anxious to run these reduction plants to capacity.

The so-called Fish Conservation Act passed in 1919 prohibited the waste of fish or the use of any food fish except fish offal for reduction purposes without first obtaining written permission from the Fish and Game Commission. In the prosecution of the sardine canning industry there is an unavoidable waste of fish, such as broken and soft fish or fish too large or too small to pack properly. The fishermen frequently make over catches which it is impossible to avoid. The written permits to be issued by the Fish and Game Commission as provided in the law, were intended to cover these unavoidable contingencies.

The difficulty was in determining what was unavoidable waste, especially in the case of soft, broken and off-sized fish discarded by the fish cleaners in selecting the fish for canning. It was a comparatively easy matter for a canner to discard half of the catch in this manner to his own great advantage and it was difficult to prove it constituted unnecessary waste.

If a canner could make a sufficient profit on his reduction or by-products plant, he was able to cut down the price of his canned sardines to a point where they could be sold for export and thus he could find an outlet for the surplus production. The Fish and Game Commission whose duty it was to enforce the Fish Conservation Act had great trouble in doing so for the reason that the law did not adequately cover the emergencies which arose. It seemed desirable that the sardine canners be permitted to use a larger percentage of the catch in their by-product plants where the profit lay, in order that they might be able to dispose of their surplus canned goods at a low price in foreign markets, and thus be able to weather the storm until foreign countries could pay more, or until a better home market could be developed.

With this in mind, the canners and the Fish and Game Commission got together and had the act amended in the 1921 legislature. It was then provided in the act that the canners, if they wished to use food fish for reduction purposes, could make application to the Fish and Game Commission whereupon the Commission must hold a hearing for the taking of testimony and if it was shown that there was no other market for the fish and that using them in a reduction plant would not tend to deplete the supply, the commission could give permission to use an amount of fish for reduction purposes, of not to exceed 25 per cent of the capacities of the plants making application. Beginning with the fall season of 1921 the Fish and Game Commission has, under the amended act, given the sardine canners a definite percentage of the catch for reduction purposes, the percentage to cover everything not used for canning except the fish offal. Experience has proved that the amended act is no easier of enforcement than the old act. Even with an efficient corps of inspectors to watch the different canning plants it has been impossible to satisfy the law-abiding ones that unscrupulous canners are not getting an advantage over them for the competition is exceedingly keen not only between individual canners but between the different sardine canning districts. If a canner quotes a lower price than the others, it is believed by those who are unable to meet this low price that he could not do it unless he was using more fish in his reduction plant than the rules allowed.

There are too many ways in which the Commission's order, fixing the percentage which can be used for reduction purposes, can be avoided. In case of a violation of the order of the Commission, it takes too long to stop the offender.

The Fish Conservation Act should be redrawn and the hearings before the Commission eliminated. The amount of fish which it is legitimate to use for reduction purposes in the process of canning can be definitely fixed in the law. A violation of the law should be a high misdemeanor and the goods manufactured in violation of the law should be subject to seizure by the state.

There is no doubt but that the present law giving a more liberal amount of fish for reduction purposes has enabled many canners to survive, who would otherwise have perished, but there is also little doubt but that permitting a certain per cent of the catch to be used for reduction purposes has resulted in the lowering of the quality of the canned sardine pack. In order to get the fish for reduction purposes most of the canners have lowered the quality as well as the price of the canned pack. For the export trade price is what counts and the quality does not cut much figure. The quality of California canned sardines must be built up. We therefore recommend that the amount of sardines which may be diverted for reduction purposes be limited to what is absolutely necessary in putting up a good pack and that this amount be definitely fixed in the law.

In our last biennial report we said that the sardine industry showed decided signs of reviving during the winter season of 1921-1922. This revival was more marked in the two seasons which have passed since that time. The catch is again very near that of the banner year of 1919. Several of our sardine canning companies have failed and others no doubt will fail before the industry is again on a firm footing. But the crisis has passed and as soon as the industry can be freed from the demoralizing tendency to make profits out of the by-products plant and to sell the canned product below cost it is bound to have a healthy growth.

PURSE SEINE FISHERY.

The purse seine fishery of southern California was dealt with in our last report and our prediction that there would be a fight at the last legislative session against the use of purse seines was fully borne out. Those opposed to purse seines claimed they would eliminate them as a conservation measure, but we are not quite sure that the basis of the opposition was economic. It is the ancient objection to a new method or appliance which upsets the old order. The situation was investigated by Dr. Tage Skogsberg, one of our fishery assistants. Unfortunately, his report could not be published in time to be read at the last legislative session. It is possible that if it had been published and available, the measure eliminating purse seines would not have passed. As the bill was vetoed, the matter is soon to be brought up again. There was a good deal of misunderstanding amongst the legislators as to what were the real facts in the case. Since that time Mr. Will F. Thompson has written a condensed review of Dr. Skogsberg's report which was published in CALIFORNIA FISH AND GAME, Volume 9, pages 87-98. This review and the complete report, which is now ready for the printer, should clear up the points at issue and enable the legislators to get a clear understanding of the situation.

The report points out the necessity of carrying on a biological investigation of the principal species of fish involved in the dispute, especially the barracuda. This investigation would be along the lines of the investigations now being carried out in the case of the tuna and sardine. As such an investigation is required by law, we hope to start the work as soon as finances will permit.

STRIPED BASS AND SHAD.

The last legislature passed measures which give striped bass and shad considerable added protection. During the last five years the annual commercial catch of these two species has gradually increased in spite of a number of restrictions on commercial fishing. It is quite certain that shad are becoming more plentiful and the closing of the last half of May to shad fishing in addition to the closed months of June and July may result in bringing them back to their former abundance.

Although the commercial catch of striped bass is increasing in spite of the added netting restrictions, it is not so easy to convince anglers that they are not actually becoming less plentiful or even scarce. Closing the last half of May to netting for striped bass, the same as shad, is a very good added protection and it is our opinion that the present laws are adequate for a few years at least.

SALMON.

The salmon, unlike the shad and striped bass, are not sufficiently protected against the drain of commercial fishing. Prior to the last legislative session, conferences were held between the salmon fisheries interests and the Fish and Game Commission and important restrictions were agreed upon which were designed to eliminate net fishing on the Sacramento River above the city of Sacramento; to eliminate all river and bay salmon fishing during June and July; and to restrict outside ocean trolling for salmon to those months when few immature fish are caught. These restrictions were all passed by the legislature but unfortunately a flaw which had remained undiscovered in the law for two years, was not detected until after the bill was enacted into law. This flaw has resulted in nullifying the closed seasons on the sea trolling. This was unfortunate for the establishment of closed seasons for salmon trolling in the sea was the most important part of the salmon conservation measure. Each salmon fishing district, from the ocean to the upper Sacramento and San Joaquin rivers were to be restricted so that the catch in each district would be cut down about 25 per cent. It was believed by all that this cut in the catch was absolutely necessary in the districts frequented by Sacramento salmon. All were agreed that it was most important to close those months in the sea districts when most of the salmon caught are small and immature.

Investigations carried on for several years under Professor J. O. Snyder, showed that the troll caught salmon in the sea are mostly small and immature except during two or three months at what is known as the height of the season. These favorable times, when most of the salmon which are caught are large and mature, were determined for each sea district along the coast and closed periods determined to prevent the catching of immature fish. The closed seasons would have cut down the total annual catch in pounds of salmon in each sea district about 25 per cent, but if we should estimate it in numbers of fish it would have been nearer 50 per cent. Commercial salmon trolling is of comparatively recent development. The old established salmon fisheries are on the bays and rivers. The bay and river fisheries are the ones which have had their fishing operations restricted. The salmon troll

fishery has been an added drain on the salmon supply with the result that the fishing restrictions in the inland districts have not been sufficient and the salmon supply as indexed by the number of fish which reach the spawning grounds in the upper Sacramento River has fallen off more than one-half.

The bay and river fishermen believe that all sea trolling for salmon should be stopped; the salmon trollers think that after the salmon get into the bays and rivers on their way to spawn they should be protected. There are a good many arguments on each side of this question but, it is our opinion that the preponderance of the evidence is against the outside or troll fishing. Washington and Oregon have stopped the outside salmon fishing both for trolling and purse seine fishing, and their opinion that we are unwise in permitting outside salmon fishing is backed up by the United States Bureau of Fisheries, which is deeply interested as it maintains extensive salmon hatcheries on all the most important streams.

We recommend that the present salmon law be redrawn so as to eliminate present errors and in order to cut down the outside trolling season as far as is necessary to prevent the destruction of immature fish.

PATROL.

Our present commercial fisheries patrol service as described in former reports is sufficient to enforce the fisheries laws with only one or two exceptions. The law passed by the last legislature prohibiting the possession of trawl or drag nets in the southern California districts has made the patrol work of that district so much easier that the one patrol boat we now have there, the "Albacore," should be able to take care of all of the sea patrol work in southern waters without the aid of another boat. In the waters from Monterey Bay to the north we are in need of a seaworthy boat for patrol. Recent experiences in trying to enforce the salmon and crab laws convince us that it is absolutely essential that a seaworthy boat be procured. We recommend again that the patrol boat *Quinnat* be sold and that it be replaced by a seagoing patrol boat.

INVESTIGATIONS.

The fisheries research and investigations of the department have been carried on mainly by the staff of the State Fisheries Laboratory under the direction of Will F. Thompson. Mr. Thompson's laboratory report is herewith presented.

In addition to the investigations of the laboratory staff, salmon investigations have been continued under the direction of Professor J. O. Snyder and by one assistant. Some of the results of this work have appeared at intervals in CALIFORNIA FISH AND GAME. As a result of these investigations, we have been able to fix quite accurately the times of the year which should be closed to salmon fishing in the sea districts so as to prevent the destruction of small and immature salmon. This could not be determined except by an accurate analysis of the catch at the different fishing centers. Extensive marking experiments have been carried on which are shedding much light on the range at sea of the salmon from the different rivers. This knowledge

is necessary if we are to properly regulate the river and sea fishing for salmon. We recommend that this work be continued and be made part of the present program.

THE COLLECTION OF STATISTICS.

The statistics collected by the Commission are for the purpose of detecting overfishing in case it occurs, and for the study of the great natural changes which occur in the abundance of the fish. It is, perhaps, not generally known and appreciated that fishery statistics in general are very defective, so much so, indeed, that it seems futile to

even attempt to use them in discussing the condition and the liability to overfishing of such great fisheries as those for the sardine or herring. This is all the more true in that until recently no data have been collected to throw light upon those great natural changes which confuse all present attempts to detect overfishing in such species as the sardine. To emphasize this fact we give the views of one of the greatest French authorities, Louis Fage, on the sardine, an opinion which may, in greater or less degree be held true of almost all great fisheries.

As Fage remarks, the available work on the sardine indicates that while the insufficiency of our knowledge of the sardine is due in large part to the lack of method and correlation in research, it is also due to the lack of available records as to the course of the fisheries and the fluctuations in their returns. Many of the questions which arise must be solved solely by statistics, which must be well made and comparable; and, as he says emphatically, it is astonishing to note the insufficiency of statistics for such a great fishery. Those of France have had their basis changed thrice, those of Portugal are based on sale prices, those of Spain and Italy are nonexistent, while the statistics in England, although good, are very recent. He enumerates the facts which should be included in these records, and are not, such as the monthly landings, the dates of appearance, the average sizes, etc., and ends with a statement the truth of which must be recognized, "La statistique biologique de la pêche, telle que Hjort (1914) l'a définie, devra s'imposer, tôt ou tard, à tous les pays soucieux d'exploiter rationnellement leurs mers".* (Biological statistics of the fisheries, such as Hjort has defined, must be collected sooner or later by all the countries desirous of exploiting their seas rationally.)

The statistics which the Commission is collecting are of the nature required for the following of the actual catch as it shows the abundance of fish, and for the study of the natural changes occurring. They are therefore of two kinds, of equal importance.

One kind deals with the *amount of the catch*, giving not merely the grand total, but also the catch per boat, with the species, place of landing, etc., and can be compiled day by day if desired. This type of data is that which is mentioned in the above quotation as so lacking in the sardine fisheries. The California statistics of this kind are gathered by means of the carbon duplicates of fishermen's receipts for fish delivered to the dealers or canners. This system is described in greater detail in a previous biennial report. (Biennial Report of the California Fish and Game Commission, 1918-1920, pp. 56-58.) It is cared for by assistants of the Commission in San Diego, San Pedro, Monterey and San Francisco.

This year has seen the statistics for the fifth successive year correctly filed and deposited in the State Fisheries Laboratory for safe-keeping. The records are filed by the name of the individual boat, year by year, and it is possible from them to trace the size of the daily catches for any species at any time. The total take by locality has been regularly reported every three months in the quarterly publication, CALIFORNIA FISH AND GAME, by an assistant devoting his time to such work. More detailed statistics are being at present compiled for the albacore fishery by two assistants engaged under a co-operative agree-

*Danish Oceanographical Expedition, *Clupeida*, 1920.

ment with the Bureau of Fisheries. These statistics are, we believe, very accurate, more so than those collected by any other government, and should be of especial worth as giving the individual catch per boat, upon which any real comparison of abundance in successive years must be based.

This system, being unique, and original, has had its troubles in getting started, there being no precedents to guide in the collection and filing of the "pink tickets" as the duplicate receipts are termed. There is at present, however, no doubt but that this system is now in full working order.

As has been found in Europe by bitter experience, these data as to the catch per boat must be interpreted in the light of the nature of the boats and their equipment. Any change in the catching power of a boat necessarily conditions the comparison of its catches from year to year. Therefore, change in gear employed must be carefully watched. With this end in view the Commission has, in accordance with a law providing for it, required the registration each year of the boats and their gear. Necessarily incomplete at the start, each year has seen the list of boats registered more complete, as they have returned to fishing or as new boats have been put into use. This forms a natural complement to the records of catches landed, and is indispensable.

From these records of catches and of boats used, there are incidentally compiled the usual form of statistics as to total catch by periods and by localities, as well as by species. The obtaining of such totals is, it is pointed out, entirely incidental and does not serve the primary purpose of the work, the furthering of our knowledge of the abundance of the various species concerned. It does, however, provide a measure of the commercial importance of the industry, and is of interest to the public. Such statistics have been issued by the Commission, as noted above, for each quarter of the year.

The second type of statistics are in Europe termed "biological statistics." These are taken by means of samples of the catch, and show the *varying composition of the same in regard to sex, size, etc.* They are indispensable in understanding the great natural fluctuations which occur, for those great fluctuations are characterized, and indeed consist of, changes in the internal composition of the catch. Examples of their great usefulness are found in such fisheries as the herring and salmon. These statistics are at present being gathered in two great fisheries, that for the sardine and that for the albacore, by the State Fisheries Laboratory, and the results are being properly organized for use by the assistants engaged.

It is regrettable that such biological statistics have been collected for but two fisheries, but the time and thought necessary to organize the proper methods have been too much to permit of branching into more fields. Now, however, that the possibilities and necessities of these two cases are well known and can be embodied in a formal routine, it may be possible to enlarge the scope. It is, however, necessary in each case to carefully survey the data obtainable and to carry research far enough to decide upon what the main changes to be expected are. It is also necessary to decide what amount of sampling will correctly define the characteristics of the catch which must be followed during their changes.

It must be remembered that putting these systems into actual practice is no mean achievement. Adequate statistics of this sort have been so rarely attempted that the principles and organization necessary have had to be discovered by experience, as will be particularly shown in the forthcoming report upon the sardine.

We are sure, as a result of this work, that the administration of our fisheries in California is upon the best and most modern basis possible. And although the results of this may not at their inception be spectacular, they will and are proving themselves the indispensable, solid basis which is at present so entirely lacking for European fisheries.

The collection of biological statistics (the second type) is a function of the State Fisheries Laboratory. A report on its work in connection with these and upon biological questions follows, dealing, however, only with the accomplishment of the first stage in the digestion and analysis of the accumulated data. The collection of these statistics as a whole must proceed as routine duties. They have been regularly performed, and results will follow from them in due time.

Respectfully submitted,

N. B. SCOFIELD,

In charge Commercial Fisheries.

REPORT OF THE STATE FISHERIES LABORATORY.

PERSONNEL.

Since the submission of the last report very great changes in the personnel of the laboratory have occurred. The consideration of these changes will indicate certain alterations which necessarily have to be made in program and in organization in order that the work will continue and be fruitful; and it will explain certain limitations which have been put upon the work.

Upon the employment of Mr. W. F. Thompson to direct the scientific work in southern California, it was necessary to obtain and train assistants, since none already trained were obtainable. Mr. Elmer Higgins, Mr. W. L. Scofield, Mr. O. E. Sette, Mr. Harlan B. Holmes, Miss Frances N. Clark, and Dr. Tage Skogsberg, comprised the staff of the State Fisheries Laboratory at the time of the last biennial report. All of these had received their training in fisheries and statistical work in the State Fisheries Laboratory, and they had at that time reached a stage in their training which promised well for the future. All of these assistants, with the exception of Mr. W. L. Scofield, have, however, now left the Commission, either for the service of the Federal Bureau of Fisheries or for work at universities. It has become very apparent that the retention of these assistants when fully trained will require a higher standard of salary and greater provision for permanency of employment than at present offers, since there is very obviously a shortage of such men in the United States.

It has been realized that the training of these men has been an accomplishment which can not fail to be of importance to the progress

of fishery science, and it has at the same time been found that the work finished during the period of training has been of high order. It can not be expected that reports of scientific work accomplished can be produced readily by men who have never before done original research, but what is produced ranks high in freshness of viewpoint and thoroughness of treatment. There need therefore be no regrets for the time and effort spent in training these assistants, and there has been no hesitation in starting the training of a new group.

It must at the same time be realized that such a process can not go on indefinitely. The direction of such work becomes a difficult task, and will become increasingly so, since it is well-nigh impossible for the director to specialize in all of the several lines to the necessary extent. Sooner or later mature investigators must be retained to make at least a working nucleus.

It is necessary for a competent fisheries investigator to be trained in a highly technical way. He must have instruction and drill in the classification and anatomy of fishes, in the methods of determining age, growth, spawning habits, and in the collection of data and in its handling according to modern statistical methods. In addition he must be widely read and well informed in the fisheries work of foreign countries, and in knowledge of distribution of life within the ocean. To this end considerable time must be expended by each assistant along these several lines, as their relation to the problem upon which he is engaged becomes apparent.

There have now been appointed as new members of the staff Mr. Harold H. Greene, Mr. W. A. Selle, and Miss Ruth R. Miller, who, with Mr. Thompson and Mr. W. L. Scofield (resident at Monterey), make up the present staff.

In addition there have been appointed two assistants under a cooperative agreement with the Federal Bureau of Fisheries. The text of this agreement is incorporated in the following letter:

April 22, 1924.

MR. WILL F. THOMPSON,

State Fisheries Laboratory,

East San Pedro, California.

My dear Mr. Thompson: The suggestion has recently been made that the Bureau of Fisheries might well cooperate with the California Fish and Game Commission in the work which you are doing. We are interested in doing this for two reasons: First, in order to aid in the important investigations of the sardines and tuna which you are making; and second, in order to provide an opportunity for more young men to be trained under your supervision. I appreciate very keenly the good work which you are doing and especially the remarkable success which you have had in interesting younger workers in fishery investigations and in giving them a broader viewpoint of fishery matters and a knowledge of, and experience with, the best methods for attacking the complicated problems involved in work of this character. As you well know, it is, at the present time, extremely difficult to get men properly trained in fishery investigation or men capable of collecting and studying fishery statistics.

It is proposed that we reserve out of our allotments for the fiscal year of 1925 (July 1, 1924, to June 30, 1925) a fund of \$2,000 to be expended in the employment of two men to work under your supervision. One thousand dollars of this is to be allotted from the appropriation of Scientific Inquiry and is to go toward paying the salary of a man to work on an investigation of the fisheries of California. Another \$1,000 is to be allotted from the appropriation of the Division of Fishery Industries and is to go toward paying the salary of a man to work on the statistics of the fisheries of California. The California Fish and Game Commission may pay as

much more in the way of salary to these men as it desires. The selection of men will be left to you, but it is suggested that they be either college graduates or men in their senior year; and preferably men who will be interested in engaging permanently in fishery work. If you are unable to secure competent ones we will try to find men on the east coast who are capable. It may also be possible for us to send out one of the men on our regular staff who can profit by the training you may be able to give. There is to be no restriction, so far as the Bureau of Fisheries is concerned, upon the activities of these men—both are to work as you may direct. The only thing we ask is that whenever the positions in the Bureau are made available they shall feel free, so far as the California Commission and yourself are concerned, to accept.

A copy of this letter is being sent to Mr. Scofield and if the proposed plan meets with his approval and yours, the necessary funds will be reserved and will be available for use after the first of next July. If the plan works successfully it is our desire to continue it during future years.

Very sincerely yours.

(Signed) HENRY O'MALLEY,
Commissioner.

There is no short cut to knowledge or to the accomplishment of research, which is the extension of the boundaries of knowledge.

The director has therefore at the present time found himself not merely responsible for his own research, but for those of his assistants as well. It is fortunate indeed that students of high enough caliber can be secured to render this course feasible.

ASSIGNMENT OF PERSONNEL.

The work done during the past two years has been moulded to a very appreciable extent by these changes in the staff. Previous to the departure of the assistants who have left our service, every endeavor was made to bring their work to the point of publication. This was in itself a rather difficult matter, as anyone familiar with the vicissitudes of research will recognize. The net result was a temporary concentration of attention upon the sardine reports, since the resigning assistants were engaged thereupon, but the field work was not neglected and the continuity of our records of the fishery has not suffered. The publication of the work on the albacore has, however, been badly delayed.

Now that the sardine work has been brought to the completion of the first publication, the available new assistants have been concentrated upon the albacore data, leaving two to carry on the sardine field work at Monterey and San Pedro. Whether the analysis of the albacore catch can be completed in time to be of use this coming session of the legislature remains to be seen. No effort will be spared.

SARDINE WORK.

The first stage of the sardine work has now been completed and the reports thereon are now at hand for printing. The significance of what has been found needs to be emphasized and clearly explained, because it points the way to the future of the work and indicates certain possibilities in regard to the future of the industries dependent upon the sardine.

The stated purposes of the investigations have been fully outlined in previous Biennial Reports, in Fish Bulletin No. 2 and in Fish and Game, Vol. 6, pages 10-12, 32, 83, 180-182. They include: (1) The detection of depletion; (2) the discovery of whatever great natural fluctuation

FIG. 12. The catch of albacore varies with the temperature. In this graph, temperature data have been set back three days so that that for July 27, for instance, appears on the same ordinate as does the catch recorded for July 24.

tuations occur, whether in abundance or in quality; (3) the foretelling of these fluctuations; (4) the analysis of whatever migrations occur, in order that the interdependence of fish of different regions may be known, and (5) the foundation of measures for protection in case depletion should occur.

Of these purposes, the second, although naturally not of greater importance, must precede all the others. It would be impossible to detect depletion, were the natural changes unknown; and, as is made very clear in the law under which we work and in our published papers, the conservation of our fisheries must be set above all else. The thorough understanding of the natural changes leads to their foretelling and to the assignment of the proper causes for instances of decline in abundance. The analysis of the migrations is necessary primarily in

FIG. 13. Comparison of the amount of barracuda, white sea bass, and yellow-tail caught by purse seiners and that taken by other boats. Black: Weekly landings by purse seiners at San Pedro, 1922. White: Weekly landings by other boats at San Pedro, 1922.

order that the extent of the effect of overfishing or of natural overabundance in a given locality upon other localities, may be determined.

It is nevertheless true that the discovery and correct definition of the great natural fluctuations in abundance is an end in itself. They must

be of great economic importance to the trade, because upon them depends the success or failure of the fishing, and their assignment to natural causes must be an insurance against rash and ill-advised restrictive legislation.

In these first reports upon the sardine it has been sought to accurately indicate the actual changes which occur, regardless of traditional beliefs regarding the species, and it has been sought to emphasize the fact that the present work is part of a permanent program; that not only does conservation of marine fishes require the eternal vigilance of a well-handled statistical system, but that the understanding or foretelling of natural changes requires continuous study.

SCOPE OF THE REPORTS.

It must be understood before the findings of the work are presented, that a rigid adherence to a practical end was insisted upon from each of the assistants. This, the understanding of the commercial catch, necessitated first of all the accurate portrayal of that catch as it actually existed. It was realized that a theory is of no use if the thing it is supposed to explain does not exist, and that a secure basis of fact must exist for any theory. Therefore, instead of presupposing a complex of migrations and miscellaneous phenomena to which almost anything could be assigned, and which fishermen's theories and observations should be regarded as proving, it was sought to impartially and rigidly record the facts of the run of fish. Our reports are, therefore, not attempts to explain phenomena which we merely suppose to exist, but they are records of what phenomena actually do appear.

The first and most natural step in such a rigidly scientific procedure, was to find out how extensive our records must be to show the tendencies we desired to analyze. The only feasible way to accomplish this was to make sure that we had determined these tendencies as nearly as might be, by securing an excess of records. Then, by breaking these into independent series and comparing them, the degree of divergence one from the other would indicate to what extent the catch was distorted by reducing the extent of the record. Were two entirely independent series of samples of the catch similar in what they showed, then the inference is fair that what they indicated must be the truth. This is the phase of the problem dealt with by Mr. Sette.

Mr. Sette has shown that to obtain a picture of the year's catch which is sufficiently correct to use, it is necessary to sample the commercial catch twice a week. He has shown that systems of sampling used by other investigators upon the herring would be entirely inadequate in the case of the sardine. In coming to this conclusion he was not aided by any analysis of their own methods made by these investigators and we believe that our analysis of what is necessary is one of the first to be made for any great fishery.

Upon this basis of what we knew was necessary, the remaining reports are made by Mr. Elmer Higgins, Mr. W. L. Scofield and Mr. W. F. Thompson. They constitute a presentation of the commercial catch as a rigid system of sampling shows it.

Mr. Higgins and Mr. Scofield show that there is a well-marked change in the catch from year to year and that the abundantly represented sizes shift in a consistent way from year to year. This change is due

to the incoming of abundant groups of sizes, which then from year to year increase in length until lost in the mass of larger fish. They furthermore show that there may be periods several years in length during which the spawning is relatively unsuccessful. They can not, however, follow the progress of these groups above twenty-two centimeters.

Their data show the passage of but one of these periods of poor spawning, and there is no ground as yet for assuming any definite regularity in the appearance of this phenomenon of dominant and suppressed groups. On the contrary it is expected that these periods of nonsuccess in spawning will vary greatly in length, and that at any time there may ensue periods of such length as to, for the time being, practically sweep out of existence the sardine fishery—for the smaller sizes at least. This same thing has happened in European herring fisheries. The advantage to the canners of keeping their product diversified should be plain.

FIG. 14. Amount of sardines in total California catch, 1915-1923.

It was also attempted by Mr. Higgins to correlate the sizes of sardines taken with the numbers of fish packed in the pound oval cans. He reports that the changes observed in the catch by our sampling methods are reflected in the pack of the canners. It is therefore possible to prophesy the take. A tentative effort at prophesying the catch during the season 1923-1924 was successful at San Pedro. There is nothing at all remarkable in this, considering the firm basis upon which our records are founded, and it is the conviction of the staff that we may look forward with assurance to the time when very definite and valuable forecasts can be given the canners. It is, however, felt that considerable caution is yet necessary in the use of this possibility.

An examination of the data from San Pedro by Mr. Thompson led to a report upon the extent to which the changes could be followed. The net result was to show that there is a certain independence between the fisheries for large and for small fish. This leaves it doubtful whether a class which was dominant during passage through the smaller sizes would remain so during passage through the larger sizes. A certain year group might appear to be very abundant while it is among the smaller sizes, simply because the few age groups with which it would be compared are on a low level of abundance. But upon becoming one of the large sizes which run during January and February the age groups with which it is contrasted are many more in number and may include among them equally dominant ages. There is, therefore, a necessity for careful observation as to just how far these conditions limit the prophesying of the catch.

There is also room for thought in regard to just how far these phenomena limit our ability to detect depletion from overfishing. In discovering this it is necessary to rely upon two criteria which can not well be considered separately. The first of these is naturally the decrease in actual numbers of fish in the ocean. The second is a decrease in the average length of life of the individuals, or, in different words, the decrease in relative numbers of old fish, a decrease in the proportion of survivals.

The presence of this great variation in numbers contained in a year class, which we have termed the phenomenon of dominance or of suppression, at once raises the question as to whether a lack of fish is due to the "natural" lack of success in spawning the younger fish, rather than to overfishing. This "natural" lack, however, would be accompanied by a greater abundance of the older fish, overfishing by a lesser abundance. The phenomena of dominant age groups, which we have demonstrated, therefore throws the burden of proof of overfishing upon the second criterion, namely the decrease in average length of life, which would accompany the greater death rate caused by intensive fishing.

The determination of the average length of life involves a comparison of the young and old age classes. In many species it may well be a fair presumption that the younger age classes are always of approximately the same abundance, the success of spawning not varying, so that at any given time the percentage of survival at a greater age may be determined at least approximately by the direct comparison of that older age group with the younger ages present. However, as we have shown in the sardine, the nature of the fishery and the errors in the necessary method of sampling, effectively preclude a reliable comparison of the smaller and larger fish, which represent the young and old.

There is, then, no choice for us in our observation of the sardine fishery, save to rely upon following each year class through its life history, and to compare its abundance at each stage with an average obtained by many years' observation. The difficulties in so doing are manifold. We have therefore come to the conclusion that it is better in the case of the sardine to frankly face the possibility that we may not be able to detect overfishing until that overfishing has progressed farther than it might be wise to allow.

It is entirely possible that some such inadequacy of data lies at the basis of the prevalent idea that "pelagic" species such as the herring are inexhaustible.

I would therefore like to propose in this biennial report the use pending the perfection of our knowledge, of the only alternative method possible, which is regrettably crude. This, the direct observation of the fishing methods, with careful record of place of fishing, apparatus, methods, and sizes of catches, should allow us to roughly compare at any desired time the relative difficulty of taking the two classes of fish, old and young. These two classes run at different times of the year, and these observations should allow us to make some estimate of their actual abundance relative to one another. In other words, our work has shown us that instead of observing a single unified fishery for the size of the catches and duration of life, we find ourselves compelled to correctly determine the catches in two more or less independent phases of the fishery, and to compare the course of the two. This is a more fundamental and more difficult task than one would realize at first glimpse. It throws a very great responsibility upon those having in their care the collection of fishery statistics and the observation of fishery methods. But could it be shown that the fishery for old fish is persistently on a decline in comparison to that for young fish it would be fair to presume overfishing, unless change in methods or apparatus accounted for the increase in young.

However, to summarize the whole, there can not be a shadow of a doubt that the securing of more refined evidence may be delayed beyond what it should be—our work has clearly indicated that to the writer. It may well be that our research, carried further, will clear this matter up and provide means whereby depletion can be detected at an early date. Thus our studies upon the seasonal run of fish may show that at some one part of the season the various classes of fish are all represented at once, and that a correct evaluation of their relative abundance may be obtained. In fact, the development of our knowledge and the per-

FIG. 15. California sardine catch by statistical districts, 1915-1923.

fection of theory may lead ultimately to the accurate observation of the condition of the species. No trouble or expense should be spared to accomplish this end, since the sardine fishery promises to increase far beyond its present bounds, and since the problems to be met with in the sardine investigation are faced in other great fisheries, but have never been solved.

The sardine is a source of food for almost all our other great fisheries, such as the albacore, barracuda, sea bass, and tuna. Tampering with its abundance may result disastrously to many interests—and in the absence of any clear-cut and sensitive method of detecting overfishing, the greatest caution must be used. The writer has convinced himself that unnecessary drain upon the supply should be avoided until research has shown that it is possible to detect overfishing in time, and for that reason it is his belief that the use of sardines for fertilizer should be emphatically condemned, and a more conservative growth of the fishery awaited. Were we considering the use of the water in a great river, would it be wise to recklessly disregard all the industries which might be dependent upon the uninterrupted continuance of its flow? Would it not be wiser to use the water only when its use was clearly more valuable than the industries dependent upon it?

And in the meantime, the need to develop our technique of detection of overfishing can not be too emphatically stated. No other agency than the state government is in a position so to do, and no government has as yet succeeded in developing such technique, or indeed, made any thorough attempt at it.

The program of investigation of the sardine has, however, indicated that the prophesying of the commercial catch a short period in advance is possible and feasible and there is every prospect that further study will refine and perfect our methods. This is indeed fortunate, as hope of detecting overfishing in the future depends upon the thorough analysis of the catch, an object that is justified by its practical results alone.

This analysis of the catch will accomplish another important end, namely, the clear understanding of the cases in which success in spawning is lacking for a number of years, causing fish to become scarce, and bringing into existence an urgent popular demand for radical restriction of the fishery. In such cases it is going to be possible to show that the older fish are not particularly affected by the particular cause of the scarcity, and it should be possible to prophesy the restoration of the fishery in time to avoid undue restriction.

In conclusion, the net results of the sardine investigations are that the present program is correct in the main but that more careful attention must be given to the statistics of catch and to the recording of method. It is going to be possible to foretell the catch, although detection of overfishing is shown to be further removed.

THE ALBACORE INVESTIGATION.

During the past two seasons observations have been made upon the albacore runs, as usual. The results from these have been filed away, but are now being subjected to analysis since the completion of the sardine work has allowed the concentration of the assistants upon the data. The report upon the albacore, which has been for some time in

the final stages, has not been completed for publication, and it is not, at present writing, known how soon the writer can resume work upon it. The material has collected faster than analysis can be made by the much-interrupted labors of a single investigator, the more so as at times he has lacked assistance of any kind. It is possible, however, to give a résumé of the results of the work, which are of very considerable interest, especially when compared to those of the sardine.

In common with all investigations carried on by the Fish and Game Commission, the primary purpose of the work is to watch carefully for evidences of depletion from overfishing. Of this there have to date been found no good evidences in the albacore fishery, despite the decline in catch. In view of this, the writer is not ready to recommend restrictive legislation which might aggravate a scarcity very probably due to the habits of the fish.

The great changes visible in the albacore catch and the distribution of the fishing grounds cannot well be assigned to overfishing on the basis of our present knowledge. The abrupt cessation in 1923 of the fishing in the more northerly of the frequented grounds is not at all characteristic of overfishing, if the history of other fisheries can be taken as any criterion. Nor is it consistent therewith that the fishing near San Diego should be unusually successful at the same time. Furthermore, the decline to the north has been a failure to take fish from what schools were present, whereas where overfishing and depletion the cause there should be every reason to expect occasional good catches from small schools. Unless these phenomena, upon investigation and analysis by means of our statistical records, prove to have other meanings than they apparently have, there is need for caution in coming to a conclusion.

Overfishing may nevertheless be taking place, despite this great variability. Developments in fishery science have served to indicate how complex the factors may be which govern the abundance of fish, and have rendered it questionable whether overfishing can always be distinguished from great natural fluctuations. It would therefore be advisable to conserve the species in so far as possible until our knowledge of basic principles of fishery science can be more clearly applied.

On the one hand, our work has indicated to us that the variability in the runs of albacore, just as in the runs of sardines, must delay recognition of overfishing and must throw increased emphasis upon the necessity for correct and thorough statistics of the catch. Our "pink ticket" system must become the foundation stone for our biological analysis.

But, on the other hand, the possibility of detecting overfishing is heightened by the relative lack of variability in the numerical strength of incoming age classes, since some clue may very probably be obtained to the length of life. Analysis is proceeding along this line. The task is a considerable one, but providing there is a lessening in the proportion of mature taken, accompanying a decline in the catch, as shown by our "pink tickets," it will be safe to attempt restriction of the fishery, we believe.

If this uniformity of incoming year classes continues in evidence despite closer analysis and the records of succeeding years, there will be no opportunity to foretell the catch by those methods so readily applied in the case of the sardine, because of the dominance of certain age groups and the suppression of others in that species.

In lieu of fluctuations in catch due to the presence of dominant or suppressed age groups, there have been found great changes due to the sensitiveness of the albacore to physical conditions. At the present stage of the work, this analysis has been carried only so far as to compare the different sections of the individual runs. It will, however, now be attempted to carry the analysis to a comparison of the annual changes with whatever oceanographical or climatological data are available. It is entirely possible that the albacore runs as a whole vary with, and that their magnitudes are the result of, conditions existing previous to the runs themselves. In such case the prophesying of the commercial catch may be possible. Such a case has been supposed to exist in regard to the mackerel off the British coasts, but the data upon which the reasoning was based seem to us very unsatisfactory and as they have never been followed up, we can place no dependence upon the relationship supposed to exist. It would appear that our knowledge of the albacore runs is so thorough that we can logically hope for far more satisfactory results than in that case, and it is the present intention to follow the work through.

It is the hope of the laboratory staff that it may at some time in the future be able to utilize a boat in following up this clue to the behavior of the albacore. This boat should make a daily traverse of a given region, taking careful scientific records, until a run occurred. Thereby it would be possible to definitely assign the runs of fish to the correct causes. As we have plotted the localities in which runs occur, it seems to us entirely feasible to accomplish this.

It may be pointed out that, as in the case of the sardine, there has been attained at least partially the first step in the understanding of the catch. The varying characteristics of the catch have been accurately recorded, and the actual variation brought to light as far as possible, both as regards the varying classes of fish taken, and as to the varying size of the catches. This, the first step in any scientific analysis of a natural phenomenon, is a secure basis upon which to base decisions.

However, in considering the detection of overfishing we have found that the presence of this great variability in catch has the same effect—in lesser degree perhaps—that it did upon the detection of overfishing in the case of the sardine, that is, to render it more difficult. A persistent decrease in proportion of mature fish and in average catch per boat must be brought to light, and must exceed so clearly the incidental variations as to be unmistakably significant. Not merely must there be known the proportion of each age in the samples obtained by this rigid system, but there must be carried forward a comparison of the average boat catch each year during the runs of the smaller or larger fish. The need for the "pink ticket" system is obvious and great. It can not be dispensed with lest we lose the most of our significant evidence.

The bearing upon theories of migration of the observed correlation between the albacore runs and the changes in climatological factors, deserves to be sharply emphasized. It has been possible to demonstrate this correlation to a sufficient extent so that it seems fairly certain that the minor intraseasonal so-called "runs" are not due to incoming schools but to schools which are already present. None of the evidence of migration has been found to bear critical examination. We must

conclude that whatever migration occurs is not responsible for the peculiarities of the fishery.

The great variations in locality of the season's catches are impossible of comparison with any of the great proved migrations, such as those of the salmon, the eel, or the birds, for in no one of those cases are the appearances abrupt and unrelated one to another, nor in any one case are the migrations omitted or partially aborted as was the run of albacore during 1923 in southern California. Furthermore, the appearance of the albacore in our waters is not preceded by its presence in any other waters.

It seems, therefore, plain to us that our albacore fishery consists of fish belonging to our own or offshore and deeper waters, and that these reappear each spring as soon, and no sooner, than they begin to take bait at the surface.

At present there seems to us to be two lines along which this phase of the albacore work, that of the study of movements, may be followed, in addition to the main one of correlating the catch with observed physical conditions. One of these lines is to carry out an intensive study aimed at the distinction of our albacore from that of any other region. This would be expensive work and would involve work in Hawaii or in foreign countries. The other would be an intensive search for the spawning places of the albacore. This, which would at least require very expensive sea-going vessels, and is not within our reach at present, would be little likely to succeed, since the discovery of a few eggs and young would be far from establishing the spawning place of the species.

The rate of growth of the albacore has been investigated as thoroughly as possible. The work upon this, which has been difficult because of the indistinctness of age marks upon the scales or bones, shows that the occasionally present youngest fish are 21½ inches long and just completing their second year; that the group of medium-sized fish, usually the smallest size taken, average about 27 inches in length and are finishing their third year; and that the larger fish, of 38 or 40 inches in length are in the eighth year or older.

PURSE SEINE INVESTIGATION.

Dr. Tage Skogsberg has completed his investigation of the purse seiners and has left the service of the Commission for employment at Berkeley.

His report is a very exhaustive treatment of the facts upon which regulation of that fishery must be based. He gives a description of the industry and its history, deals fully with the importance of the purse seine method to the fresh fish supply and to the canneries, and analyzes their effect upon the supply and price of fish. He then considers them in relation to the various species which they take, such as the barracuda, the white sea bass, the yellow tail, and the blue-fin tuna. His conclusions as to the possibilities and results of prohibitive or restrictive legislation are carefully considered, and he points out their great importance in the future development of our sea fisheries.

The fact that the purse seine fishery was enormously expanded in response to the wartime demand is well shown. Although the purse seiner *Alpha* operated as early as 1893, yet it was not until 1915 that expansion took place. In that year five boats were used. But each

year saw successful fishing and high prices, until in 1920 more than a hundred boats were operating. That such an enormous growth could be called forth on demand demonstrated that in case of war need great supplies of food can be drawn from our waters. But since then the demand has slackened, and certain of the fisheries not having been productive, there have been hard times in the purse seine fleet (at least until the time of completion of the report).

It is also clearly shown, that regardless of the nationality of the fishermen, the ownership of the fleet has come to rest in the hands of the banks and of moneyed men. The fishery is not, therefore, a process of "fattening" the "alien" at our expense.

The purse seiners are shown to be of the greatest importance to the several fisheries. Almost all the blue-fin tuna taken is brought in by purse seiners, and the canning of this species is dependent upon them. They also take a very large part of the yellow-fin tuna and the bonito used for canning. Of three species which are very important in the fresh fish market, namely the barracuda, white sea bass, and yellow tail, the supply during the winter half of the year is almost altogether obtained from the purse seiners. Although Dr. Skogsberg's analysis covered but six months of the year it is evident that the purse seine is responsible for nearly half the supply of fresh fish markets at Los Angeles harbor.

Examination of the individual fisheries shows no conclusive evidence of a harmful effect by the purse seiners. In the case of the barracuda the purse seiners are especially important as bringing fish from Mexico, thus lightening the demand upon our local fisheries, and acting as an aid in their conservation. The method is not more harmful than those of other great fisheries. Young fish are caught in excessive numbers in but a small portion of the year, a fault which could be readily corrected by a close season. In regard to the white sea bass, the same may be said as to the effect of the purse seiners in tapping distant grounds, and but few young bass are caught. Nor are there any evidences of overfishing in the cases of the yellow tail or blue-fin tuna. Dr. Skogsberg concludes that overfishing must be discovered by careful biological study of the catches, and that as long as a given supply is to be taken from the water, the purse seines are as efficient and reasonable a means of so doing as any.

It is evident from the report that any radical restriction of the purse seine fishery will result in rendering the supply of fresh fish precarious and inadequate, and that—instead of conserving our supplies—a much greater strain will be imposed on our local waters. Dr. Skogsberg recommends the making of a close season during April and May, as a protection to the young barracuda then taken in numbers.

Dr. Skogsberg's report is reviewed here at some length because it is indicative of the knowledge such work can place in the hands of the administrator and the legislator, and because it demonstrates the great value of our statistical system of boat catches, the "pink ticket" from which it was largely taken.

He had time only to analyze the catches for a period of six months and there should be a similar analysis of the remaining six. There is no reason why such an analysis of boat catches cannot be carried on continuously and presented in addition to the ordinary statistics of catch, for such an analysis may be made a step in the obtaining of the total

catch. But the essential necessity on the part of the compiler for a knowledge of the biology of the fish and for a knowledge of statistical methods is obvious from a perusal of Dr. Skogsberg's report. For that reason it is elsewhere urged that changes be made in our organization which will allow of the development of such a system of reports.

GRUNION INVESTIGATION.

Miss Frances N. Clark, who was with the laboratory during the first year of the last biennial period, is now at the University of Michigan seeking a higher degree. She is, while there, undertaking an investigation of the grunion and of our common market smelts. The laboratory has taken samples of these species at regular periods, and has forwarded them to her for analysis.

Her work has progressed through a study of the reproduction and rate of growth of the grunion, and has now begun on a study of the two smelts (*Atherinops* and *Atherinopsis*) from the same standpoints. The results of his work are promising to be of considerable importance, especially in the case of the grunion, which will sooner or later require protection, as it has become a very famous fish on our southern beaches, and is sought by thousands of people during the periods of its runs.

LOCAL RACES OF HERRING, SARDINE, AND ANCHOVY.

Mr. Carl L. Hubbs, of the Museum of Zoology, University of Michigan, has prepared for publication as a Fish Bulletin of this laboratory, a report upon the local races of the three commercially important clupeoid fishes found on our coasts, particularly as the definition of these local races is affected by seasonal variations. The importance of such investigations is very great, since through them has been expected some clue to the relative interdependence of fishes of different regions. The persistence of a given peculiarity of structure in the fish of a limited region argues that those fish do not migrate extensively beyond the boundaries of the region, and that they do not receive migrants. This would seem to be true regardless of the cause of peculiarity, and regardless of whether the peculiarity is racial, the result of environment, or transitory. The matter is, however, a complex one, and must receive intensive analysis, toward which Mr. Hubbs has made this contribution.

THE LIBRARY.

Since July, 1922, the library has received very few books. This is due in part to the necessity for economy, and in part to the prolonged absence of a librarian able to devote sufficient time to ordering and caring for accessions. However, enough recent publications have been secured, so that the laboratory investigators have had an opportunity to keep fairly familiar with the progress of fishery science.

The library as it now exists, although of moderate proportions, contains a good representation of the most important work in the subjects of interest to the research men stationed here. It has of course been the aim of those in charge of selecting books to emphasize such material as has fundamental significance and definite relation to the problems with which the Commission has to deal, keeping at a minimum papers of purely local, incidental or general biologic interest.

The lines of future library development are clear. As in the past, it will be important to spend a certain percentage of the appropriation for current books, especially in view of the fact that fisheries research is now the object of increasing international interest and attention. A set of "Biometrika," which is the chief journal of statistical method, would be an invaluable addition to our resources. However, the main mode of expansion must be acquisition of desired papers that are scattered in various scientific periodicals. Whenever possible, we will order only the issues which contain the special investigations of interest, so as to avoid purchase of large volumes in which most of the material would be useless.

Aside from addition of books, provision for permanent preservation of the collection now shelved becomes more and more necessary. Three-fourths of the material here is in the form of paper-covered pamphlets, which are of course exposed to dust and other deteriorating influences. Their adequate protection requires that they be bound as soon as possible.

As far as its immediate usefulness is concerned, the library's chief need is for a systematic catalog. Enlargement of the staff and growth of the library combine to make us acutely conscious of the waste of time consequent upon trying to use unindexed material. We therefore consider it essential to build up a catalog that will make available for ready reference the perhaps unrealized resources of the books already at hand.

CONCLUSION.

In this report, three facts are preeminently worthy of consideration. One is the necessity for retaining good men as guides for our student assistants; another is the need for giving the scientific work a more stable position and a better relationship to the work of other agencies; and the third is the great emphasis which our work is now throwing upon the necessity for carefully fostering our statistical system. As far as concerns the first two facts, the retention of good men and the permanence of the program are closely bound together. Good men do not work for the money immediately in sight. They must feel themselves engaged in work which has its place in the world, a place that is recognized as worthy.

Much of the fishery work which has been carried on in the United States has been transitory and unstable in aim, and the fundamental principles of fisheries conservation have received very little attention because of the evanescent nature of each attempt. We have tried to so formulate our work that it includes those things which are fundamentally necessary, and we are trusting that our devotion to a cause will not be wasted by the heedlessness of the future. There is, however, little ground at present for this faith in the persistence of the work, and as a result it is hard to persuade anyone that earnest, unselfish work will be worth while, or that the program will last long enough to solve any of the basic problems of fishery research and conservation.

In short, the organization of which the laboratory now forms a part exists only in the minds of those who now hold office in and under the Commission. With the passing of these incumbents there will vanish all traces of the carefully thought out permanent program. None of the objectives have been made obligatory, and no provision has been made for seeing that our successors are well informed or well advised. Under

such conditions good men can not be retained, and the following of fundamental and difficult aims is rendered hopeless. The remedy lies plainly at hand, to formally organize the scientific work, to formally provide for good advice and cooperation from the outside world of science, and to see that our aims are rendered obligatory in so far as is proper and in such a way as to protect them from ignorance or malice.

The whole of modern fisheries science teaches the lesson that adequate statistics are continuous statistics; that conservation implies continuous observation; and that some of the most fundamental problems are yet unsolved and must be the object of unremitting attack by biologists. And unless our work here can be placed on a permanent basis and provision made for its close, intimate contact with the whole field of work, there is little utility in proceeding further.

The writer would therefore recommend a legal foundation for the formal organization of the laboratory, the formation of a cooperative arrangement with the Federal Bureau of Fisheries, and the creation of an advisory committee or board to keep a general supervision of the scientific work. The time is most opportune for these things, in that the bureau is friendly, and that the various states are awakening to the need of the study of conservation. By our action we can set a precedent whereby the bureau can be made a unifying and correlating agency between the several states, to the end that cumbrous and awkward treaty control can be avoided.

The writer would also urge that the work done up to the present has demonstrated the importance of the statistical system, and its intimate connection with the biological work. He would recommend the careful reorganization of the statistical system to free it from any danger of its devotion to erroneous ends, and to place it under the immediate direction of a scientifically trained man.

Respectfully submitted.

W. F. THOMPSON.

In charge.

REPORT OF DEPARTMENT OF EDUCATION, PUBLICITY AND RESEARCH.

*The Honorable Board of Fish and Game Commissioners,
State of California, Sacramento, Cal.*

SIRS: It is with a feeling of gratification that I hand you herewith a report on the activities and accomplishments of the Department of Education, Publicity and Research, which you will find, reviews the most successful biennial period, so far as service to the public is concerned, since the establishment of the department in 1914. I am more than ever convinced that no more fundamental conservation work can be done than that accomplished through the development of a public sentiment favorable to wild life conservation.

The past biennial period has been marked by increasing demand for lectures and displays of motion pictures. Some of the increased demand has come from the numerous men's clubs such as Rotary, Lions and Kiwanis. Continued endeavor has been made to reach the numerous

LECTURES.

high schools of the state, as is evidenced by the record which shows that more than thirty were visited during the period. Return engagements are a common thing, showing that lectures and pictures are appreciated. One long-postponed trip to southern California resulted in a series of nineteen lectures and a total attendance of 9275. The demand for lectures continued from fish and game protective associations.

A particularly fruitful field of endeavor has been the numerous training classes for scout masters, camp fire guardians and leaders of girl scouts. Eight meetings with such groups have resulted in stimulating the interest of those who deal with boys and girls. Conservation needs can most readily be spread by contact with such groups as these.

Each spring, a series of nine lectures on fish and game have been given in a course in forestry at the University of California. These lectures afford a splendid opportunity for inspiring a student group that later goes out and carries the message of conservation into the field of forestry and industry.

The usual series of illustrated lectures have been given at the State Fair at Sacramento each September.

The following is a summary of the lectures given:

Lectures Given During Biennial Period, July 1, 1922, June 30, 1924.

| Organization | Number of lectures | Attendance |
|---|-----------------------|------------|
| High schools ----- | 31 | 10,223 |
| Grammar schools ----- | 17 | 8,100 |
| Universities and colleges ----- | 23 | 3,215 |
| Civic and public ----- | 34 | 7,053 |
| Boy scouts, camp fire girls, etc. ----- | 12 | 447 |
| State Fair ----- | 26 | 3,250 |
| Miscellaneous ----- | 17 | 1,481 |
| Motion picture films only ----- | 9 | 4,300 |
| Totals ----- | 168 | 38,069 |

FIG. 16. Studying nature first-hand. Nature guide field excursion, Yosemite Valley, Summer, 1924. Photograph by J. Lloyd.

SUMMER RESORT EDUCATIONAL WORK.

Through cooperation with the National Park Service, opportunity has been given each summer to build up public sentiment relative to conservation in Yosemite National Park. The director of your Department of Education and Publicity spent the summer of 1922 and that of 1923 in Yosemite lecturing and conducting field trips. The results have been most gratifying. Many thousands of people have heard conservation lectures and, better yet, have gained first-hand information relative to

game and nongame species. Personal contact with thousands and the teaching of natural history in the open is laying a worth-while foundation upon which the conservation of the future can be built. If "there is no more pitable sight than ignorance in action," then the converse is certainly true, that there is nothing more effective than intelligence in action. Let the people of this state really know the life history and habits of its fauna and its present status, and conservation will be assured.

It is a satisfaction to chronicle the fact that the nature guide work in Yosemite has proved so useful that the original goal—a museum and a park naturalist in every national park and a nature guide program every season—is now assured. No little share in the success of the nature guide movement is to be attributed to the farsightedness of the California Fish and Game Commission in supporting the work in its beginnings.

With an increased personnel, the same program of evening lectures and campfire talks, daily field trips and office hours has been pursued each summer with greatly increased attendance, as can be seen by reference to the following tables:

Attendance Record Yosemite Nature Guide Service.

| | Field trips | | Lectures | |

MOTION PICTURES.

The Educational Department has not been in a position to push the use of motion pictures by schools and other organizations because of the small supply of films on hand and because several of the films are badly worn. The only additions made in the past two years were a reel devoted to the life history and habits of the king salmon and several hundred feet on waterfowl in the Sacramento Valley made by ourselves. Particular mention should be made of a fine series of pictures of whistling swans taken in the rice fields of Butte County. A flock of a thousand birds was photographed in a rice field and splendid pictures of the birds in flight were secured on Butte Creek.

The need is for a more adequate library of films so that opportunity can be taken of the many requests for their use. Replacement of worn films is particularly urgent.

Nor does the demand come from within the state only, for during the past two years, requests have come from four western states and Hawaii for the use of our films. It was necessary to refuse these requests in that the pictures are so constantly used in our own state.

During the past biennial period there has been increased demand also for conservation literature on the part of teachers and pupils of the public schools. Evidently the public schools are placing more emphasis upon nature study and conservation and herein lies the reason for increased demand. The Commission's supply of teachers' bulletins is practically exhausted and hundreds of letters are written a year explaining that the supply of the bulletin, "Bird Study in the Public

FIG. 17. The place to teach conservation is out-of-doors. Cooperative work in Yosemite is building a better sentiment favoring conservation. Photograph by J. Lloyd.

Schools'' is entirely exhausted. Where can the commission's educational campaign be made more effective than in the schools of the state? Were we in a position to furnish suitable helps to teachers, much could be accomplished. Stress is here laid upon the urgent necessity of supplying this great need in the immediate future. In the same connection should be mentioned the opportunity afforded through boy scout organizations. If leaflets or bulletins, suitable for use by scouts, were available, suitable training relative to the conservation of wild life would be included in the educational program of each scout troop. A special fund to cover the preparation and publication of such leaflets and bulletins is most important.

The department again cooperated with the State Department of Education in the preparation of a bird and Arbor Day manual. A great deal of material was furnished but funds not being available for the publication of the manual, part of the material was utilized in a special number of the "Western Journal of Education."

As in the past, many contributions of specimens of birds and eggs were made to schools and nature study departments. This department of the Commission aims to act as a clearing house for information relative to the teaching of nature study and conservation and also as a source of material for objective teaching.

PUBLICATIONS.

Volume 8 of CALIFORNIA FISH AND GAME, the quarterly magazine of the Commission, contained 256 pages and 87 illustrations. Two special numbers, a Game Refuge number containing maps of every game refuge in the state and a description of each, and a Hatchery number of 80 pages containing a history of fish-cultural operations in California were issued. Volume 9 contained 192 pages and 41 illustrations. No special numbers were included.

The edition of the magazine is now 7000 and the circulation very close to 6500. Many applications from individuals and libraries for early numbers of the periodical in order to complete sets have been received. Unfortunately many early numbers are now so rare as to preclude issuance to any but public libraries or libraries of public or important institutions. There is continued evidence that the magazine is read from cover to cover and numerous commendatory letters have been received.

A clean-up of the mailing list in the fall of 1922 resulted in the elimination of only about 200 names. The mailing list grows at the rate of about twenty names per month.

One use which the magazine appears to fill regularly is that in the classroom in our high schools where it is constantly used for reference by biology classes. Articles taken from the quarterly often appear in outdoor magazines and in newspapers.

Numerous newspaper items have been sent to the more prominent newspapers of the state. These appeared to be well received by editors and nearly always appeared in print. Among the special series of articles should be mentioned a number dealing with books for sportsmen furnished the sporting editor of the San Francisco "Examiner," a short series of items dealing with the restoration of Lower Klamath Lake as a breeding ground and a long series of one item a week relative to saving the Klamath River as a fish reserve sent newspapers during the spring and summer of 1924. Material for several feature articles was furnished.

INVESTIGATIONS.

Several investigations of importance have been made. They include the destruction of steelhead trout in the Pajaro River due to pollution and low water, investigation of the status of game birds in the marshes of Butte and Sutter counties, fish resources of the Klamath River, and an investigation of the relation of birds and mammals to the foot-and-mouth disease. The latter was occasioned by the continued attempt to place the blame for the spread of the disease upon wild birds and mammals. In the case of the Merced outbreak, ducks and sea gulls were accused. Although many migratory ducks were found on infected areas, yet the disease failed to develop along the line of flight and no positive evidence could be found. Certain control measures involving buzzards were advocated near Merced.

An epidemic among predatory animals in El Dorado County during the spring of 1924 was found to be the result of rabies, as was shown by a positive test made on a California gray fox.

The department continues to compile data on the annual deer kill, on hunting accidents and on the work of the scientific collector.

Respectfully submitted.

HAROLD C. BRYANT,
In charge Education, Publicity and Research.

SACRAMENTO DISTRICT REPORT.

*The Honorable Board of Fish and Game Commissioners
of the State of California.*

GENTLEMEN: Moving of the board office to Sacramento occasioned considerable reorganization and expansion of the office force. Practically all of the general routine work of the Commission is now handled through this office.

Deputies in this division, like those in other parts of the state, have greater areas to patrol than those in most other states. Complaints as to law enforcement come largely from those who do not realize the impossibility of being at every place where a violation occurs when one man has to cover two counties. A larger patrol force is greatly needed.

FIG. 18. Ineffective screening of an irrigation ditch was responsible for this loss of fish life in Butte County. More than 2100 sunfish are shown in the picture. Photograph by A. E. Culver.

During the biennial period ending June 30, 1924, this division has had to deal with many difficult conservation problems. Chief among them, involving this division, has been the problem presented by a cement power ditch on the American River which menaced the lives of hundreds of deer passing between their winter and summer ranges. It took considerable experimentation to figure out means of getting the deer safely across the canal. The power company cooperated splendidly in rescuing deer and immediately began the construction of a fence which will prevent recurrence another year.

One serious problem in this division is found in the numerous projects where streams are wholly diverted from their channels for power purposes. Seldom is proper consideration given the fish thus destroyed. We sincerely trust that companies concerned will not divert all the waters in the streams but will permit sufficient water to flow in the main channels to insure the maintenance of trout life. The South Fork of the American River is one of the best trout streams of the state that is available to the large centers of population. It is useless to plant nearly a million trout in this stream and its tributaries if the water in its channel is allowed to be diverted.

FIG. 19. Rescuing deer from a power ditch on the American River. Until provision was made for safe crossing of migrating deer many were drowned or frozen and hundreds had to be rescued. Photograph by Euell Gray.

Since much of the best shooting ground for waterfowl, as well as the best deer country, is found within this district, the enforcement of law occupies an important place in our duties. Conservation sentiment in this district continues to expand, as is shown by the percentage of convictions for violations and the increase in the number of fines inflicted. California deputies each patrol a greater area of square miles than do the deputies of any other state. The force, moreover, is inadequate as compared with conditions in other states. Residents and visitors are now beginning to realize what a great asset fish and game are to the community. In years past few arrests were made and it was almost impossible to secure a conviction by jury even in the face of strong and conclusive evidence. How different today! The Commission now fearlessly submits the equity of the game laws to a judge or jury. Due to the steadily-growing belief of our best citizens that the fish and game laws are of equal value with other laws on our statute books, the Commission and its officers receive the hearty cooperation of the county prosecutors and justices.

A glance at the comparative chart on page 12 will show the tremendous burden placed upon our law enforcement deputies. The land area of California comprises 153,650 square miles and has less than eighty deputies to patrol its land and water areas and enforce its fish and game laws, besides it has nearly 1200 miles of coast line. Each California deputy's share of patrol is over 1387 miles, 810 acres of land, and more than 360 acres of freshwater streams and about 11,810 acres of lakes. New York state with but 46,070 square miles has 143 more salaried deputies than has California. The New England states with the addition of New York, Ohio and Delaware comprise less area than California, but have 436 wardens. These states expend \$794,028, as compared with California's expenditure of \$102,169 for warden service. Yet there are some who are prone to criticise the Commission for not detecting every violation of the fish and game laws.

Respectfully submitted.

GEORGE NEALE,
In charge.

SAN FRANCISCO DISTRICT REPORT.

*The Honorable Board of Fish and Game Commissioners,
State of California.*

GENTLEMEN: The past two years have noted few changes in game conditions in the San Francisco District. The biennial period, however, has been a severe one for trout on account of the fact that the rainfall throughout the state was practically half normal and in many places even less than that. Streams that have never failed in previous years have been without water. Very few of the coast streams carried enough water to clear the bars at the mouths, with the result that few steelhead were able to make their way into the lagoons, and even when they did the water was so low they could not reach the spawning grounds.

In certain streams fishing was excellent at the opening of the season the first of May. One of these, the Gualala, in Sonoma County, had

FIG. 20. A scene on the Klamath River above the Copco dam. Photograph by J. O. Snyder.

particularly good fishing during the entire month of May. The river was closed and the fish that were in the lagoon could not make their way into the ocean. One Sunday there were 135 limits taken, the fish measuring from 8 to 10 inches in length. Many limits were taken in less than an hour's time. There were so many fish in the lagoon that by the first of June the fish caught were very poor, there being insufficient feed in the stream to take care of them.

The dry season will have a very serious effect on the trout streams of the district. To bring conditions back to normal will require heavy stocking on the part of the Commission. It is hoped that with the return of normal rainfall the ocean steelhead will return and assist in stocking the coast rivers. The shortage of rain, however, is not entirely without some benefit. Predatory fish, such as suckers and hardheads, have been cleared out of many trout streams, and if the contention of many fishermen is true that these species prey largely on trout, newly planted trout will have nothing to do but to grow fat for the anglers.

Duck shooting during the biennium was excellent everywhere except in the San Joaquin Valley, where water conditions were not normal. In the Suisun marsh, the season of 1923-24 was as good as the most enthusiastic duck hunter could desire.

The Fish and Game Commission is severely criticized for not entirely stopping the sale of ducks. Few hunters realize how great a task it is to control a matter of this sort. There are bootleggers in ducks as well as other things, we will admit, but as a matter of fact the number of ducks sold in San Francisco now does not equal five per cent of those sold before the nonsale law was adopted. In San Francisco in the old days there were sold every season from three to five hundred thousand ducks. There were game transfer companies in operation, with the permission of the courts, that handled thousands of birds

each day. All of this has been stopped. The comparatively few birds that are now sold are smuggled into San Francisco by automobile and are peddled to those who are willing to take a chance. Restaurants and hotels are searched repeatedly and seldom do the deputies find in excess of the bag limit. The sale of ducks in the field is even more difficult to control. Market hunters will continue to sell birds to unlucky hunters. Such sales are between man and man and it is practically impossible to secure evidence that would warrant the taking of anyone into court.

Contrary to many reports, quail have not materially decreased during the past two years. More or less quail shooting can be had in every county of the state. Recently a well informed hunter from San Benito County was in the San Francisco office discussing conditions in that county. His estimate as to the number of quail in San Benito County was not less than 100,000 and not more than 200,000 birds. Fortunately, quail are good breeders. The average clutch of eggs is better than 15. With 100,000 birds or 50,000 pairs as breeding stock, and 15 eggs per pair, in that county alone we have a potential flock of 750,000 quail for the hunters to harvest. Even if only one-tenth of this number of young birds reach maturity, it must be admitted that San Benito County is well supplied with quail. Valley quail can adapt themselves to civilization better than almost any other game bird. You need not go farther than Golden Gate Park or any other similar park in our state to have this fact proved. Quail, as years go by, are becoming more and more educated as to the ways of the hunter and it is largely for this reason that complaints are received that quail are decreasing. In most sections of the state, as soon as a shot is fired, the quail take to the high brush where it is practically impossible for hunters to do any shooting.

The annual kill of deer in California is between 15,000 and 20,000. Deer hunting has increased largely on account of the ease with which the deer country can be reached by automobile. One of the most serious crimes that we have to contend with is the killing of deer at night by spotlight. Night hunters do not care whether they kill buck, doe or fawn, for they realize that it is extremely difficult to catch them. A deputy must be at the right spot at the right time, otherwise it is practically useless to go into court. We know of no law that can be drafted that will make it easier to control this illegal work. The present law is as strong as any law could be made. The only way that the work can be stopped is to put more men into the field.

The respect that people in general have for the laws on our statutes is proportionate to the ability of the government of the state to enforce these laws. Without proper enforcement any law will soon become obsolete and will be broken by otherwise high class citizens. The enforcement of the game laws is similar to the enforcement of all other laws, easier than some, perhaps, for game law violations are committed for the most part by those who fish and hunt or whose business brings them into direct contact with the law and not by citizens as a whole. Our California laws, with very few exceptions, are as good or better than the fish and game laws in other states. The laws are reasonable and are not opposed by those who take conservation seriously. There is, however, a considerable class who hunt and fish who are meat hunters and not sportsmen. Such men care nothing for

tomorrow. If they had the opportunity, they would kill the last quail, duck, or deer and then brag about it for the remainder of their lives. Such men cannot be reached by appealing to their finer sensibilities but must be educated through the courts. This education can only be accomplished by having men in the field to enforce the laws, who are trustworthy in every particular, who have the backing of the judges, and the assistance of all good sportsmen. Day by day the sentiment for the enforcement of the game laws is getting better and better. Heavier fines are imposed and more and more violators are convicted, but the best results can only be obtained by having a greater number of active game wardens working at all hours of the day and night. It is unreasonable to expect one man to keep an area of many hundreds of square miles free from violations. Those who hunt are increasing year by year and make no complaint regarding the payment of a dollar for a license. If the number of hunters increase, so should the number of wardens increase. The more seriously the laws are enforced, the more seriously will violations be considered. The penalty for violating a game law can be made as high as the conscience of the justice of the peace before whom the violator is taken, will allow. Fines as high as \$500 may be imposed and in addition a jail sentence may be given. In counties where heavy fines are imposed, there is a decided improvement in conditions. In other counties where the minimum fine is the rule, violations are more frequent. Many individuals are willing to take a chance on killing game during the closed season if when taken to court they will only have to pay \$25; but if there was a probability of their having to pay somewhere near \$500, they would not take a chance.

The work of the deputies in the San Francisco District has, for the most part, been entirely satisfactory. The general public has no conception of the long hours that a serious deputy puts in. It is not everyone who can make good in law enforcement work. It requires a peculiar training and fitness to make good as a game warden. The most discouraging thing that can happen to a deputy is to take a good case before a justice of the peace and have the defendants liberated or made to pay a petty fine.

More wardens, better cooperation of the judges, and the active assistance of sportsmen will assure game in California for years to come.

During the last two years fines totalling \$32,995 were imposed in the San Francisco District. Judge Ray Griffin of Redwood City imposed fines amounting to \$3,455 in his court. Other judges in various parts of the district did almost as well. One deputy working in San Mateo arrested defendants who were assessed a total of \$4,215. Another deputy in Santa Cruz County had fines to his credit in the amount of \$3,675. A third deputy in Marin County had \$3,025 to his credit. Fines of \$100 were not unusual. Some of the most noteworthy cases by deputies working in this district were as follows:

August 13, 1922, Judge Griffin of Redwood City fined Felix Doer and John Perasso \$250 each for killing a doe; December 10, 1922, Judge Whipple of Fort Bragg sent Amador Mecidas to jail for 180 days for using a set net; March 11, 1923, Judge Griffin fined P. S. Bogani \$200 for having illegal abalones in possession; April 9, 1923, Judge Wallace

of Salinas fined T. Kohanhoni, a second offender, \$150 for the possession of illegal Pismo clams; May 17, 1923, Judge Evans of Loleta fined Fred Simmons \$150 for killing a deer during the closed season; July 30, 1923, Judge Griffin fined Joe Trupiano \$200 for possession of illegal abalones; August 14, 1923, Judge Boyd of Plantation fined R. F. Webb and D. S. Cloughn \$100 each for killing a fawn; September 2, 1923, Judge Snow of Napa fined Manuel Lopez and Tony Alvorez \$100 each for killing a fawn; October 21, 1923, Judge Johnson of Daly City fined four Italians \$450 for taking 133 song birds in an Italian bird net; April 25, 1924, Judge Jacks of San Francisco fined Paladini Fish Company \$250 for having small striped bass in possession; May 25, 1924, Judge McGuinness of Dunsmuir fined the same fish company \$500 for shipping small bass to Portland; June 19, 1924, Judge Rudolph of Novato fined John Alberti \$300 for killing illegal deer.

Respectfully submitted.

J. S. HUNTER,
In charge.

LOS ANGELES DISTRICT REPORT.

*The Honorable Board of Fish and Game Commissioners
of the State of California.*

GENTLEMEN: Geographically comprising but the lower third of California, this southern division, during the biennial period ending June 30, 1924, has had to deal with the most spectacular population growth ever experienced anywhere over an equal area, bringing upon us an even greater than proportional gain in outdoor sporting enthusiasm.

Inevitably, this enormously has increased our responsibilities, far beyond capacity of the dollar-unit of license income adequately to finance meeting such demands by the general expansion in every department thereby indicated as necessary.

That these primary outdoor-attraction assets have assumed a new and greater importance in their ever more valuable relation to the general public welfare, scarcely needs suggestion excepting to the ever-shrinking minority which sees in fish and game pursuit only a pastime of our large leisure classes, and with more wilful perversity, persists in ignoring the enormous material, physical and psychological worth of wild-life to the entire commonwealth of California.

Our guiding principle during these troublous times steadfastly has remained the greatest general good, not only to the sporting classes most directly interested in conserving fish and game attraction-assets through their loyal and liberal support of our work with their hunting and angling licenses, but also to the non-sporting public. Through upkeep of these outdoor resources, so alluring to sportsmen of other older Eastern states where conservation has been less forehanded than here, our wild-life has called countless thousands of well-to-do men this side the Sierras to invest themselves, their families and their lifetime accumulations in the material up-building of this state. Yet, the nonsporting citizenry of California in this matter still continues enjoying the unique role of better than incidental beneficiary without

cost. The licenses of his sport-loving friends at an all-too-moderate dollar annual privilege-tax, have paid for everything the commonwealth has done in behalf of rod and gun attractions until today licensed hunters and anglers stand more than ever ready to double the dollar and do the job to the limits of what more money could accomplish.

FIG. 21. Klamath River Steelhead trout. Photograph by George Neale.

Conservation of fish and game, being carried on entirely by popular support of a minority, is dependent upon a favorable public sentiment for its financing to an even greater degree than any other self-supporting activity undertaken under state direction. The history of wild-life work in America is a chronicle of activities primarily initiated by sportsmen in behalf of sportsmen and paid for by sportsmen; since under no other system of general appropriation from tax funds has anything of lasting consequence ever been accomplished.

Over fifteen years ago, California's leading sportsmen, with commendable foresight, saw this great truth, and shot to center with the Hunting License Act, followed in due course with a similar tax upon which has grown, all too gradually, the considerable superstructure of an organization which up to date at least has accomplished the demonstration that money in large amounts intelligently invested toward the protection and propagation of fish and game, can long delay its extermination and the extinction of its allied industries, if not also perpetuate it. That, the future alone can determine; but present policy is being shaped to mould the conservation program along the indicated lines of civilization, and thus adapt it to the now assured destiny of southern California—intensive development.

In face of these facts, the importance of broad popular education to the economic as well as sentimental value of fish and game hardly could be ignored; so the last two years have seen no slackening in such activities throughout southern division work. Our veteran field patrolmen have consistently joined therein at every opportunity; liberal advertisement has been given of law-enforcement activities to the end that the law-abiding majority might know how much is being done to protect their interests against the careless or selfish who respect only the consequences of violation. That long years of patient effort seem at last to have borne some fruit in fostering popular support for earnest wild-life effort, is one of the gratifying demonstrations of the past biennium which offsets many a disappointment.

Transportation of sport-seekers and their housing has stimulated a huge expenditure in itself, being an enormous and duly-recognized contributor to the automotive industry, now conceded to be among the biggest businesses of the country. Perhaps a better idea of the financial importance of our outdoor assets may be derived from learning that this year the lower third of this state will license not far from a fifth of a million sport-seekers, each of whom, on a conservative estimate, will put into general circulation through the exercise of this dollar privilege, at least another hundred dollars in transportation, guns, ammunition, fishing-tackle, camping goods, general equipment; patronage of resorts and more beyond mention, totaling perhaps 20 million dollars.

Growing interest of other organizations than the Fish and Game Commission in wild-life, is another outstanding feature of the past biennium, due no doubt in considerable degree to desire of helping temporarily over a recognized emergency, of which expense an expected increase in sporting license will relieve the various now cooperating counties another year. Such cooperation, where genuine and non-competitive, nor losing sight of legitimate objectives, has been warmly welcomed as adding materially to the enforcement of law. Eventually the Fish and Game Commission expects in southern California to relieve these county cooperating agencies of any expense in fish and game conservation, just as the Supreme Court already has relieved the counties of any responsibility in fish and game regulation by consistently deciding that such regulation of hunting and fishing remains the special province and prerogative of the biennial legislatures, thereby lending at least some stability to these restrictions and allowing the sporting public as well as industries allied thereto, the opportunity to

learn what regulations were to govern them until the next legislative session, at least.

Suffice it to say that the ever-increasing needs of southern California these last two years have been met as far as we were able, and not as we would have met them; but rather, as our controlling limitations required.

Prosecution of petty offenders against the technicalities of the hunting and fishing restrictions is of course a necessary part of the day's work in wild-life conservation and must go on, lest the voluntary support of the vast majority in observing the laws they believe in, be prejudiced by seeing too large a proportion of persistent violators escaping the punishment they deserve. For this purpose, an elaborate and expensive patrol organization must be maintained. To the violating class, such constitutes the outstanding activity of the sportsmen's Fish and Game Commission; but to the vast majority who support the law consistently because they know that without restriction, fish and game speedily would become but a bad memory, real conservation represents bringing all the people to appreciation of what it actually means.

The fostering and encouragement of sporting resorts open and accessible to all the people has played a prominent part in southern division activities during the past two years, it also being truly constructive conservation of a particularly important nature in view of the self-supporting nature of all wild-life work in California. Herein also, the general public has proved a very direct party-at-interest, since whatever contributes to the outdoor attractiveness of the state can not fail to benefit every business in it, not to mention the inestimable advantages of facilitating healthful outdoor recreation.

As one result of such work, we see a steadily-swelling increase in number of hunting and fishing resorts where the average sportsman of moderate means may enjoy himself at reasonable cost. There is a very common tendency amongst promoters to found their propositions upon the quite generally exploded theory of exclusiveness, forgetting that volume of business is the surest prospect of lasting profit. The enormous success of our largest resorts has been built upon a broad policy of serving all comers, since the millionaire class naturally is in the minority.

Respectfully submitted.

E. L. HEDDERLY,
In charge.

| Totals | 2,119,950 | 255,950 | 816,090 | 80,000 | 35,495,550 |

RECAPITULATION, SEASON 1922-1923.

| | |
|------------------|------------|
| Trout..... | 56,527,105 |
| *Salmon..... | 35,495,550 |
| Grand total..... | 92,022,655 |

*There were 4,041,000 salmon hatched from eggs collected at the Klamathon station during the past winter and spring that will not appear in the statistical report until the next biennial report of the Commission. There would have been a great many more salmon eggs taken had not the racks been washed out by the floods.

REPORT.

THE GROWTH OF THE STATE SCHOOL SYSTEM.

Statistical tables submitted herewith give ample testimony of the growth of the public school system of California during the biennial period covered by this report.

There are several factors responsible for this growth which is without parallel in the history of California. First of all, there has been an unprecedented increase in the population of the state, particularly in southern California and in the San Francisco Bay region. Second, the high schools of California have expanded to include training in the vocations, Americanization, part-time education and home economics, thus attracting types of people hitherto not interested in high school education. Third, the compulsory education law has been revised in the interest of better enforcement and state, county and school districts have cooperated as never before in the enforcement of the educational rights of children. Fourth, there has been, during the last ten years, an improvement in the economic status of the average family which makes it possible for parents to keep their children in school for a longer period. Fifth, the spirit of America was quickened by the World War to a recognition that an American family which neglects to prepare its children to be the best and most efficient citizens they are capable of becoming, is a "slacker" family.

The following tables show the growth of the public school system in enrollment and average daily attendance during the last ten years:

Table Showing Growth in Total Enrollment in Public School System 1914-1924.

| Year | Enrollment |
|-----------|------------|
| 1914..... | 513,319 |
| 1915..... | 523,573 |
| 1916..... | 557,350 |
| 1917..... | 582,926 |
| 1918..... | 617,402 |
| 1919..... | 644,295 |
| 1920..... | 712,818 |
| 1921..... | 796,642 |
| 1922..... | 862,461 |
| 1923..... | 943,438 |
| 1924..... | 1,055,848 |

It will be observed that the increase in enrollment in all branches of the school system for 1914 to 1924 was 105.7 per cent.

Comparative Table of Average Daily Attendance.

| | 1914 | 1924 | Per cent increase |
|------------------------|---------|---------|-------------------|
| Kindergarten..... | 6,937 | 26,763 | 286 |
| Elementary school..... | 319,244 | 537,638 | 68 |
| Secondary school..... | 48,312 | 140,619 | 188 |
| Totals..... | 374,493 | 705,020 | 88 |

GROWTH OF SCHOOL EXPENDITURES.

Increase in Bonded Indebtedness.

The growth of school expenditures during recent years has been a matter for general comment. In any discussion of this matter it should be borne in mind that the growth in school expenditures is not peculiar to California. Throughout the nation, the expenditures for education have increased greatly since 1914. The percentage of increase in school expenditures in California during the last decade is greater than that of any other state in the Union. However, the increase is due almost entirely to the growth in population in California—greater proportionately than that of any other state—and to the fluctuation in the value of the dollar. With the population of California increasing annually at a rate varying from seven to eleven per cent, the various school districts have found it necessary to vote bonds and incur heavy building expenses in order to accommodate the children of newcomers. Heavy increases in bonded indebtedness are reflected in tax rates and expenditures for schools. If accommodations had not been provided for the children, the stream of newcomers would have stopped long ago. A heavy increase in bonded indebtedness for schools is a part of the price California has to pay for growth. It is significant that although all bonds for school purposes require a two-thirds vote and although the people of the community incurring the indebtedness are the sole judges of the necessity for bonding, few bond issues for school purposes have failed in recent years and most issues have carried by majorities ranging as high as twenty to one.

The following table shows the increase in bonded indebtedness for school purposes during the last ten years:

Comparative Table of Bonded Indebtedness for Schools.

| | 1914 | 1924 | Per cent increase |
|-----------------------------------|-----------------|------------------|----------------------|
| Elementary school districts ----- | \$21,148,897 00 | \$84,394,852 00 | 299 |
| High school districts ----- | 8,937,750 00 | 58,397,223 00 | 553 |
| Totals ----- | \$30,086,647 00 | \$142,792,075 00 | 375 |

The increase in bonded indebtedness for elementary and high schools during the last decade was 375 per cent. A large proportion of this increase in bonded indebtedness is due to the increase in enrollment amounting to 105.7 per cent during the same period. However, a considerable part of the increase is due to community pride and rivalry. In many school districts, elaborate and ornate school buildings have been erected for the purpose of "boosting" values in the vicinity and satisfying community vanity. The burden of paying for such satisfaction will be distributed over a period of many years whereas the satisfaction gained is only temporary. It is significant that in many communities that boast of expensive and ornate school buildings, the salaries paid to teachers are so low that good teachers can not be obtained. Such communities have sacrificed the substance of education for its shadow.

I wish to point out that the laws relative to bonding in California are faulty in that they permit districts to bond for an improvement that will not last the life of the bond issue. It is not uncommon for school districts to bond for forty years to erect a frame school building

that will be outworn in twenty-five or thirty years. The laws should be amended so as to provide that while bonds for fireproof buildings may be voted for a forty-year period, bonds for nonfireproof buildings can not be voted for more than a thirty-year period. This generation has no moral right to impose a debt on people living forty years hence for facilities which such people will never have opportunity to use.

Increase in Maintenance Charges.

The following table shows the increase in maintenance charges, including all school expenses except capital outlays:

Comparative Table Showing School Expenditures for Maintenance.

| | 1914 | 1924 | Per cent increase |
|--------------------------|-----------------|-----------------|-------------------|
| Kindergartens | \$309,627 00 | \$2,113,325 00 | 583 |
| Elementary schools | 15,073,325 00 | 43,676,755 00 | 190 |
| Secondary schools | 5,864,462 00 | 29,785,951 00 | 408 |
| Totals | \$21,247,414 00 | \$75,576,031 00 | 256 |

The total expenditures for maintenance of schools of elementary, secondary and kindergarten grade have, during the ten-year period, increased 256 per cent, whereas the increase in daily attendance (see page —) has increased only 88 per cent. An analysis for the reasons for this discrepancy in percentages of growth in attendance and expenditure shows that while there has been a large increase in the number of "dollars" expended for each pupil, reckoned on the basis of average daily attendance, the state is putting little more purchasing power per pupil into the schools than in 1914.

The following table shows the actual cost per pupil in 1914 and 1924 and makes a comparison between the cost in 1914 and the cost in 1924 reckoned in 1914 values. In translating 1924 values into 1914 values we have used the government estimate of the purchasing power of the 1924 dollar which is 64 cents, reckoned in terms of the 1914 dollar.

Comparative Table Showing Cost Per Pupil Reckoned on Basis of Average Daily Attendance.

| | Cost per pupil in 1924, reckoned in dollars of 1924 value | Cost per pupil in 1924, reckoned in dollars of 1914 value | Cost per pupil in 1914, reckoned in dollars of 1914 value |
|--------------------------|--|--|--|
| Kindergarten | \$78 96 | \$50 54 | \$44 68 |
| Elementary schools | 81 24 | 51 99 | 47 21 |
| Secondary schools | 211 82 | 135 57 | 121 39 |

It will be noted that the increase in cost per pupil reckoned in terms of the 1914 dollar, which is the only fair basis for comparison, was for the ten-year period ending June 30, 1924, as follows:

| | |
|--------------------------|-----------------------|
| Kindergarten | \$5.86 or 13 per cent |
| Elementary schools | 4.78 or 10 per cent |
| Secondary schools | 14.18 or 11 per cent |

These percentages represent the true increases in school expenses during the last ten years and are chargeable for the most part to the expansion of the schools along more practical lines and to the increase in the average number of days school was maintained from 172 in 1914 to 181 in 1924.

ECONOMY IN EDUCATION.

In practically every country of the world, the people are struggling under the burden of taxation due to the World War. In our own country the national debt was multiplied twenty-four times to finance American participation in the struggle. The interest on this debt each year amounts to almost as much as the total national budget before the war. The expenses incurred in taking care of the soldiers whose bodies were impaired by war, and the widows and orphans of the men who made the supreme sacrifice for their country, add greatly to the necessary taxes. There is therefore a demand, and a proper demand, that every unnecessary public expense be eliminated and that expansions in governmental works be curtailed so far as possible. In the light of the demand for reduced taxes, every agency of government is called upon to justify its expenditures. If any expenditure can not justify itself, it should be eliminated. Educational institutions and agencies may not escape such a test. However, education is fundamental in American democracy and any proposed impairment of the school system must be subjected to careful analysis. The people of this country can not afford to pay the debts of the World War or any great part thereof by sacrificing the educational opportunities of the young people of America. The greatest extravagance in which the people of this country can indulge is that involved in neglecting the education and proper development of their young people. The best and wisest economy that may be practiced by the American people is not in saving dollars, but in saving and developing talent, in saving boys and girls from ignorance and waywardness. That the people in California believe in saving young people as well as dollars, and that when a choice must be made they choose to save children rather than dollars, is evidenced by the tremendous majorities given school bond issues and the recent tendency to increase the majorities given such bond issues.

There are, of course, some citizens who would reduce school expenditures regardless of the effect of such reduction on the efficiency of the schools. There are others who urge that the schools are not as efficient as they should be and for that reason should have their revenues reduced. It is admitted that the schools are not perfect; in fact, they are far from perfect. However, these imperfections are due for the most part to the fact that they are only human institutions. They are imperfect in just the same way that civilization is imperfect. Can it be said that the government, or the church, or business, or any other human institution is more nearly successful? Would we reduce the revenues of any of these institutions on the ground that they are not so efficient as they should be? The absurdity of any such policy need not be argued. The remedy for imperfection in any institution is not to be found in the reduction of revenue, but in the improvement of the people who conduct the institution. If the schools of California are to meet the demands made upon them more fully than they have been meeting them, the state must furnish better opportunities for teacher-training. There is no place in the whole school system where a dollar will bring greater return to the state than in the teacher-training institutions of the state. It is in such institutions that the correction of the defects in our school system can best be made.

Suggested Economies.

It is possible to effect economies in school administration without impairing the efficiency of the schools. One of the chief savings that might be effected is in the school building. There is no justification for the elaborateness or ornateness of school building construction which is observable in many communities. School buildings should be substantial and of artistic design, and such buildings may be built at much less cost than the over-adorned and over-equipped buildings of which there are too many examples in California. As a matter of fact, the artistic effect of school buildings is destroyed by over-ornateness. A great saving could be effected by the adoption by local boards charged with the construction of school buildings of a modest type of construction.

Another considerable saving can be effected by reducing the number of weak school districts in California. Every new school district created in the state adds \$1,400 a year as a minimum to the expenses of the state and county. Every weak school district that is nursed along by the importation of a widow teacher with several children or by other questionable means adds to the burden of taxation in the amount of at least \$1,400 a year. It is my opinion that at least a quarter of a million dollars each year might be saved by lapsing school districts that have ceased to justify themselves. Districts remote from other district schools must be saved even though they are weak because the children in such district must be educated. But districts with small attendance within two or three miles of other schools and on well paved roads should be lapsed and the money spent on their upkeep saved to the taxpayers. Already a good beginning has been made along the lines of this suggestion. However, legislation will be necessary before this needed reform can be fully accomplished.

SCHOOL BUILDINGS.

The people of California are justly proud of their buildings. Nowhere in the world, I believe, can better public school buildings be found. In recent years, school boards have been erecting more substantial buildings, many of them fireproof. I wish to commend the policy of building fireproof structures wherever fire risks are extraordinary and wherever community wealth justifies the undertaking. During the last year, several large school buildings of nonfireproof construction were destroyed by fires, evidently of incendiary origin in most cases. The total losses due to such fires exceed \$1,000,000 for last year alone. The fire losses in cities like Woodland, Oakland, Alameda and Los Angeles, and losses of less degree in smaller communities, during the last year, give point to the recommendation that fireproof school buildings be erected in places that can afford such type of construction.

CODIFICATION OF SCHOOL LAW.

The school law of California has not been recodified since 1872. During the last fifty-two years, the laws relating to schools have been amended and added to without reference to any comprehensive plan. It is not uncommon to find a single topic treated in three different sections of the code and in three conflicting ways. The school law is

perhaps twice as voluminous as it should be. The courts in passing upon cases involving interpretation of the school law have frequently remarked the need for codification.

Among the chief reasons for the verbosity and generally unsatisfactory condition of the school law are the following:

First, the dual system of credentialing teachers due to the provision of the constitution that certification of teachers shall be in the hands of the county boards of education. An elaborate scheme of credentialing teachers is outlined in the law to govern the state board of education. A similarly elaborate scheme of certification is outlined for county boards of education.

Second, the plan of legislating for all school districts uniformly. It is absurd that a statute made to fit the needs of little school districts in the mountain counties should apply in all particulars to city school districts like Los Angeles and San Francisco. And it is equally absurd that a grant of power to city school districts like Los Angeles and San Francisco should apply to the smaller school districts of the state. The school law is generally complicated by amendments, provisos and exceptions to general regulations due to an effort to meet the great variety of situations in the school districts of California. Moreover, crude attempts to classify school districts according to number of teachers, or number of pupils, appear in the statutes. I am very doubtful whether any such classification is constitutional. It would be most unfortunate if a court should upset such classification on the ground that it is unconstitutional. The remedy is to work out a classification of school districts that will be constitutional and will at the same time give communities varying greatly in size and in school problems an opportunity to meet these conditions reasonably and without undue hampering.

The codification should not involve recommendations for organic changes. It should seek simply to eliminate conflicts, to cut out surplusage, to simplify and rearrange the various provisions of the law. Any attempt to reorganize the school system under the guise of codification is foredoomed to failure. I believe that a special commission should be appointed to consist of the Superintendent of Public Instruction, the president of the State Board of Education, the Attorney General, a county superintendent of schools and a district attorney, together with two senators and two assemblymen, such commission to be charged with the responsibility of codifying the school law and provided with sufficient funds to employ the assistance necessary for accomplishing the task.

REVISION OF THE COURSE OF STUDY IN THE ELEMENTARY SCHOOLS.

The making of the course of study of the elementary schools by legislation has not been successful. California has prescribed by law the teaching of no less than twenty-seven subjects in the elementary school whereas the average number of subjects prescribed in other states is fifteen. No other state approaches California in the number of legally required subjects. The situation would be acute if it were not for the fact that makers of courses of study have complied with the law only technically. Strict compliance with the statute would make real elementary education almost impossible.

Recognizing that a scientific reorganization of the course of study is necessary, the superintendents at the annual convention in 1923 asked me to appoint a committee to consider ways and means of effecting such revision. The committee soon came to the conclusion that a mere revision of the list of subjects would not suffice; that what is needed is a scientific analysis of the material now offered in the various subjects, including the old-time subjects, with a view to the elimination of obsolete and nonessential matter. To make such analysis a considerable fund is necessary. The appropriations made for the office of the Superintendent of Public Instruction were not sufficient to make such investigation possible. I therefore applied to the Commonwealth Fund of New York for a grant sufficient to enable the committee to undertake the work. A grant of \$18,000 was very graciously made and plans for carrying on the investigation were formulated during the summer of 1924.

Following is the plan finally adopted:

Plan of Organization.

The Superintendent of Public Instruction to whom the grant was made will be the general director of the investigation and of all efforts to secure acceptance of the results of the investigation by authorities charged with making the course of study. He will coordinate the work of the two committees.

There shall be two committees, each consisting of eight or nine members charged with the two phases of the enterprise, (1) the research phase, and (2) the phase of application of the findings to courses of study.

The research committee will nominate the active director, pass upon his plans for investigation and critically evaluate the results of the investigation before they are submitted to the general committee.

The general committee will consider and criticize the findings of the investigation, and assist in securing acceptance thereof by authorities charged with the making of courses of study.

The research committee will consist of the following members:

W. W. Kemp, Dean of School of Education, University of California.

J. C. Almack, Dean of School of Education, Stanford University.

Virgil Dickson, Director of Research, Oakland Schools.

Robert H. Lane, Director of Research, Los Angeles Schools.

C. L. Phelps, President Santa Barbara State Teachers College.

B. M. Woods, Representative of the President, University of California.

A. O. Leuschner, former Dean of Faculties, University of California.

H. B. Wilson, Superintendent of Schools, Berkeley.

Grace C. Stanley, State Commissioner of Elementary Schools.

The general committee will consist of:

Arthur Walter, City Superintendent, Salinas.

Susan M. Dorsey, City Superintendent, Los Angeles.

Fred M. Hunter, City Superintendent, Oakland.

Joseph Marr Gwinn, City Superintendent, San Francisco.

Mark Keppel, County Superintendent, Los Angeles.

Ira C. Landis, County Superintendent, Riverside.
Mamie B. Lang, County Superintendent, Tehama.
William John Cooper, City Superintendent, Fresno.
F. W. Thomas, Vice-president, Fresno State Teachers College.
E. P. Clarke, President State Board of Education.

The active director will be charged with the duty of outlining plans, appointing his assistants and making the investigation, subject to approval by the research committee.

The University of California will act as depository and auditor of the funds.

The University of California will furnish quarters for the director and his assistants.

NECESSARY ADJUSTMENTS AND ELIMINATIONS DUE TO DECREASE IN APPROPRIATIONS.

Adjustments in Superintendent's Office.

The budget of 1923 made a considerable reduction in the appropriations for the support of the office of Superintendent of Public Instruction and State Director of Education. In spite of these reductions the office has made every effort to carry on its constitutional and statutory functions as fully as possible. However, it has not been able to maintain all its functions unimpaired.

The following statement of adjustments made necessary by budget reductions is made:

(1) No increase in the salaries of the assistant superintendents has been made in spite of the fact that these salaries are forty per cent less than salaries paid assistant superintendents employed by the state board of education. The salaries of assistant superintendents in my office are at the rate of three thousand dollars per annum whereas the salaries of assistant superintendents employed by the state board of education are at the rate of \$4,500 to \$5,000 per annum. Such a discrepancy in salaries for employees of the same rank can not be justified.

(2) The Assistant Superintendent in charge of the important work of Americanization was obliged to take a leave of absence without pay for approximately three months in 1923 because of lack of funds to pay her salary. The Supervisor of Attendance took a similar leave of absence during the summer of 1924. Only the loyalty of these employees to the interests of the state enabled me to retain their services under such conditions.

(3) The office of Deputy Director of Education has been all but technically abolished because no appropriation for salaries was made. The business of the division of normal and special schools has been hampered because of lack of funds to employ clerical assistance necessary to check claims and salary rolls. Every claim has been passed by me merely as a matter of form with a specific disclaimer of responsibility for accuracy because no funds are available for checking claims.

(4) The appropriation was insufficient to enable me to publish the school law which the law requires me to distribute to superintendents, trustees and other school officials.

Adjustments in the Teachers Colleges.

Adjustments in the teachers colleges and special schools reported to me in September, 1923, as being necessary to meet budget cuts and keep a sufficient reserve to take care of the normal increase in enrollment during the second year of the biennial period were as follows:

Santa Barbara State Teachers College.

I am reporting at this time the adjustments in this institution made necessary by the reduced appropriations. We have had to eliminate the Music Department as a whole, leaving one person for half-time only to cover statutory requirements in that subject.

The specific cuts were as follows: Head of Department of Music at \$2,700 and one part-time person at \$135 per month, who should have been retained upon a full-time basis.

In the Home Economics Department, one person at \$1,800 was eliminated. It will be absolutely necessary to replace this person with one on half-time.

Among the employees, we have eliminated one man at \$1,140 from the grounds force, and one woman at \$900 from the janitorial service. We have also eliminated the telephone girl at \$25 per month.

I believe this covers the eliminations. The support fund is practically what it was before.

(Signed) C. L. PHELPS,
President, Santa Barbara
State Teachers College."

Chico State Teachers College.

Find listed below all positions eliminated because of budget cuts:

| | |
|---|------------|
| Supervisor of Industrial Arts Department..... | \$2,600 00 |
| Supervisor in Kindergarten-Primary Department..... | \$2,400 00 |
| Assistant Librarian in Training School and College..... | \$1,200 00 |
| Two Student Assistants in English Department..... | \$1,000 00 |

The entire extension work of the school, eliminating the work of one hundred sixty students.

Correspondence courses, eliminating fifty students.

Our Industrial Arts Department is one of our strongest departments. The instructor in charge has been granted a leave of absence for one year and a portion of the work will be carried by the Art and Kindergarten-Primary Departments. We can not satisfactorily carry on this arrangement for more than one year.

The dropping of the other lines of work means that the regular members of the faculty must assume just that much more work, and they are now pretty heavily burdened.

The extension and correspondence divisions have both been very important pieces of work. They have practically revolutionized the work of the teachers in northern California. The elimination of this work is one of our hardest blows.

In addition to the elimination of these two departments, two of our regular teachers are being carried on the city of Chico payroll.

The budget practically eliminates five and one-half full-time teachers.

(Signed) C. M. OSENBAGH,
President, Chico State
Teachers College.

San Diego State Teachers College.

In response to your request of July 18th, I enclose, herewith, a statement showing the situation as to the effect of the official state budget and appropriations made thereunder, upon the list of positions in this institution.

It is evident from this statement that the situation is that we shall have funds for the seventy-fifth fiscal year somewhat exceeding the funds available in the seventy-fourth fiscal year. Therefore, there will be practically no elimination of positions; but there will be, on account of the appropriation deficiency shown in the statement, a transfer of positions from state support to support by the high school district of San Diego and by the student fund for the summer session, 1923.

The appropriation deficiency, taking into account the balance in the salaries fund carried over from the seventy-third to the seventy-fourth fiscal year, is \$6,323.75. It is rather difficult to single out the positions transferred from state support to city support and student-fund support by reason of this deficiency. The fact remains that the budget necessitated these transfers and the consequent increase of local support.

As to maintenance, it is probable that, with the increase in the appropriations for support made to cover the appropriation of fees by the general fund of the state, there will be funds to cover losses of the income represented by our former contingent fund.

(Signed) EDWARD L. HARDY,
President, San Diego
State Teachers College.

California Polytechnic School.

Twelve teachers and eleven employees eliminated on account of budget reductions. The commercial, household arts, music and art courses were eliminated, and the mechanics and agriculture courses curtailed considerably.

(Signed) C. L. SLUSHER,
Business Manager,
California Polytechnic School.

San Jose State Teachers College.

In response to your letter of July 18th, the following eliminations have been made at the San Jose State Teachers College as a result of the reduced budget:

| | |
|--|-------------|
| Supervisor of Rural Education, salary----- | \$2,700 00 |
| Instructor in Art, salary (part-time)----- | 900 00 |
| Instructor in Home Economics----- | 2,100 00 |
| One Training School Instructor----- | 2,100 00 |
| Instructor in Agriculture and Nature Study----- | 2,520 00 |
| One Librarian----- | 2,040 00 |
| One Instructor in English (reduced from full-time to half-time) salary reduction----- | 1,000 00 |
| One janitress----- | 900 00 |
| | <hr/> |
| | \$14,260 00 |

(Signed) A. R. HERON,
Acting President,
San Jose State Teachers College.

Fresno Teachers College.

Replying to yours of the 18th instant, with reference to positions eliminated from the teachers college here because of budget cuts, it is rather a difficult matter to give a definite and detailed reply. While cuts have not required that we eliminate anyone from the combined teachers and junior college, we have been compelled to transfer to the Fresno city payroll one instructor in physics, one instructor in physical education for men, and one for women, one instructor in foreign languages, one instructor in English, one in social science, one in agriculture, one in biology and one in mathematics.

I trust this information will meet with your requirements.

(Signed) C. L. McLANE,
President,
Fresno Teachers College.

Humboldt State Teachers College.

Reductions in appropriations, Humboldt State Teachers College,
Arcata, California; 75th and 76th fiscal years.

The support reductions will make eliminations as follows:

| | |
|---|------------|
| Library books | \$2,400 00 |
| Laboratory equipment and supplies | 3,000 00 |
| Grounds | 1,000 00 |
| Lectures | 500 00 |
| Team hire | 400 00 |
| Exchange of typewriters | 250 00 |
| Supplies | 160 00 |
| | <hr/> |
| | \$7,710 00 |

(Signed) N. B. VAN MATRE,
President,
Humboldt State Teachers College.

San Francisco State Teachers College.

It was necessary to eliminate two instructors in music, one in art, one in hygiene, and two assistant librarians. It was also necessary to do away with the entire department devoted to overcoming speech defects such as stammering, stuttering, and foreign accent. The special training of kindergarten teachers for children of foreign speaking parents was given up. Several part-time instructors in the sciences were stricken from the roll. All provision for summer sessions work was disallowed in the budget so that our regular instructors probably will have to donate part of their vacations to the public service in order to keep the summer sessions going.

(Signed) FREDERIC BURK,
President, State Teachers
College of San Francisco.

The attached table sets forth the numbers of positions involved in the adjustments described above. I am pleased to be able to report that in the cases of certain of the teachers colleges the cooperation of the local communities has made possible the restoration during 1924-1925 of a small number of the positions eliminated during 1923-1924.

Table Showing Reduction in Personnel by Reason of Budget Reduction as Reported August, 1923.

*Partially replaced by part-time people.

REPORT OF THE DEPUTY SUPERINTENDENT OF PUBLIC INSTRUCTION.

RURAL SUPERVISION.

HON. WILL C. WOOD,

Superintendent of Public Instruction.

SIR: In 1920 the people by a very substantial majority adopted Constitutional Amendment number sixteen which provided better support for the elementary and secondary schools of the state. The legislature of 1921, in giving statutory effect to the constitutional provisions, for the first time in the history of the state, endeavored to place the rural schools more nearly on a parity with the urban schools.

While for years the city school systems had provided for supervision through city superintendents, supervising principals, and supervisors of special subjects such as music, art, manual training, domestic arts and physical education, the rural schools have had to be content with the cursory annual or semiannual visits of the county superintendents. Increasing responsibilities of administrations due to new requirements and added population, made these visits of the county superintendents less and less effective in their supervision of the rural schools. The legislature, recognizing this condition, in its 1921 session amended section 1858 of the Political Code so as to provide an emergency and supervision fund for rural schools. Previous to 1921 school districts having an average daily attendance of 700 or more in the elementary schools were allowed two additional teacher units for each 700 pupils in average daily attendance. This provides in part for supervision in city school systems. In 1921 section 1858 was amended so as to give one additional teacher unit for each 300 in average daily attendance to elementary districts having an average daily attendance of 300 or more, and one additional teacher unit for each 500 pupils or major fraction thereof in average daily attendance in the county at large, exclusive of the elementary districts having an average daily attendance of 300 or more. This latter is the basis of the rural supervision fund. It is the first recognition the state has given that children in the rural schools are entitled to the same educational advantages as is received by pupils in the city schools.

Strange as it may seem there are people who fail to realize that supervision is essential to good teaching. In this connection I can do no better than quote from the introduction of the report of County Superintendent C. H. Nielsen of Butte County, on rural supervision.

"It would seem that it should be self-evident that supervision of teaching is of such value to teaching and hence of such great importance in the country that it should have the unqualified support of all who wish to see progress and not retrogression in our national life. It would hardly be denied that the education of our boys and girls is their foundation for citizenship. And upon this education the future welfare of the nation depends.

Supervision has always existed in other fields of endeavor and its value is so self-evident that no one would think of dispensing with it. A road would not be built by a crew of men without someone to supervise

the work, no matter how skilled in road building the crew of men might be. The building of lives is surely as of great importance as the building of roads. And supervision in the field of education, where lives are built, is just as essential to the securing of uniformly good teaching as the supervision of the crew of men is in the securing of uniformly good roads."

So patent to superintendents were the needs of real rural supervision that as soon as the statute permitting it became effective it was put into nearly every county where the law permitted it. Some few counties had under their county government acts employed supervising teachers with the title of visiting deputy superintendents prior to 1921. Generally speaking, however, rural supervision has been in effect since the fall of 1921.

Types of Supervision.

The supervision reported may be classified as general and special.

The general supervision, as its name implies, consisted of the supervision of all the subjects of the course of study, and in addition thereto assistance in solving all the problems of the teacher which, left unsolved, might cause her failure not only as a teacher, but as an individual as well.

Special supervision may be subdivided into two classes, (a) the supervision of special subjects as Americanization, music, art, physical education, agriculture, penmanship and visual education, (b) scientific survey.

As an instance of the supervision of Americanization the following is quoted from the report of Miss Louise Clark, superintendent of Sonoma County:

"Statistical Report, September, 1923-July, 1924.

| | |
|---|-----|
| Number of Americanization centers | 12 |
| Number of classes | 21 |
| Number of English classes | 16 |
| Number of citizenship classes | 5 |
| Total enrollment | 478 |
| Men | 321 |
| Women | 113 |
| No data | 44 |
| Nationalities represented | 27 |

Citizenship.

| | |
|---------------------------------|-----|
| Applicants for first papers-- | |
| 1923 | 65 |
| 1924 | 114 |
| Petitioners for second papers-- | |
| 1923 | 17 |
| 1924 | 46 |

At the May naturalization hearing 10 of the 40 applicants for citizenship had attended the evening classes. All were passed with honors and were presented with diplomas by the United States Government.

In a survey of 5000 minors in the rural school districts 30 per cent were found to be of foreign-born parentage."

To succinctly explain the second division of special supervision,

scientific survey, the following extract is given from the report of Superintendent William H. Hanlon of Contra Costa County:

"When the supervision and emergency fund was established, I followed the usual procedure and appointed some supervisors of special subjects. It soon became apparent that such a plan was only 'pecking,' that it was my responsibility to know in an objective manner how well the schools were doing in giving the fundamentals of an education and where improvements in procedures and increased efforts were necessary.

Briefly, I used part of the supervision and emergency funds to employ expert service to measure the products of the schools in this county. It was necessary to know by the most accurate measures available of the pupils and in the light of these facts determine whether or not the school was doing as well for each individual pupil as possible. In short, we are trying to fit the school to the pupil rather than the pupil to the school as has been the tendency in the past.

This program has progressed to a point where we can justly tell that teachers now think of their pupils as individuals, have accurate knowledge of the capabilities of each and are endeavoring to teach so that each child gets the most possible for him out of school. This to my mind is the best evidence that we are at least on the way to realizing our responsibility toward the children and patrons of seeing to it (as far as is within our power) that school money is getting the best possible returns in terms of human betterment.

The supervision fund has further made it possible to have a scientific survey made of the school buildings and equipment of the county, and as a result we have a recommended program of building, consolidation, regrouping of schools, etc., such as when completed will give this community an ideal school system. We recognize that such a program will be difficult to put over and will take years but we get great satisfaction in seeing that each local improvement in the way of building or reorganization is so 'steered' as to be an accomplishment of the program. In short, we are daily moving toward the ultimate accomplishment of a definite plan instead of helplessly allowing local ambitions to carry out building plans that have no connection with a general plan, and which in a few years will prove to be narrowly conceived, and a large part of the people's investment wasted."

Results of Rural Supervision.

The results of supervision, such as are measurable in so short a time after its institution, are here considered under the following heads: (a) influence of supervision upon the community; (b) influence of supervision on the teacher; (c) influence of supervision on the pupil.

The following quotation from the report of Superintendent L. E. Chenoweth of Kern County indicates the great value to the community of rural supervision.

"It is difficult to give in a brief paragraph a measure of results obtained from rural supervision. The marked improvement of the rural school over the brief period that supervision has been in effect, is the best argument in favor of rural supervision.

Teachers are now checked up regularly, and as a consequence the work is kept in proper shape at all times; the school buildings and school grounds are cleaner and better kept, and the country children are receiving training which was available formerly only in the city schools.

As a concrete example of school improvement, our record shows that nineteen rural schools reached a condition known as Superior Standard, and twelve schools reached a condition known as Standard, making a total of thirty-one schools which, during the school year, met the very strict requirements for providing the best school facilities during the school year. These facilities include: sanitation of school grounds and buildings, management of light, heat and ventilation, condition of the

pupils and instruction given in the school, and require fifty points of perfection, to place the school in what is known as the Standard class. A Standard school is a practical, workable, livable, rural school, taking the place of the neglected, decrepit, run-down, forlorn institution, which has so long been a tragic joke. The patrons, community organizations, trustees, and all lovers of education, once their interest was awakened by the supervisor, contributed to the improvement of the school property, which in turn increased the value of the real estate surrounding the school, and bettered the community life.

Under the direction of the music supervisor, social gatherings, farm bureau meetings, and community meetings of all kinds have been enriched and improved. By arranging programs, country life has been bettered in many communities by the music supervisor, and through talks on home improvement, interior decoration and kindred subjects by the art supervisor.

During the first year of supervision, nearly fifty of these meetings were attended and participated in by the supervisors and the demand has grown so great, that it is now a question of attending such meetings as time will permit. An accurate record is kept of each meeting attended, the number of people present, and the result obtained.

Pupils with particular talent have been discovered by the supervisors, and placed in courses which led to their educational and financial advancement. Misfits and failures have been found and assisted to become useful factors of the community."

More attention was naturally given by superintendents to the effect of supervision on the teaching force since the contact here is closer than between either the community or the pupil and the supervisor. While some instances are quoted of a lack of cordial relationship between a small minority of teachers who refuse to be budged from their fixed and predetermined views, the great mass of teachers welcome the aid of the "helping teachers." The following incidents reported by Superintendent Ida M. Collins of San Bernardino County are illuminative:

"We have had many a teacher who would have given out and ceased to give of her best but for the impetus of the visiting supervisor and the thought that a visit was soon at hand when she could unburden her soul and get a fresh hold. One striking example was in a little railroad town in the midst of the desert, where a young teacher was getting her first experience, both with trying to live in an isolated community, where she was the only unmarried woman (and incidentally, the only one who did not smoke), and in teaching school. The discipline was hard, the school was composed mostly of boys, and they were getting away from her.

The supervisor came unexpectedly one day, saw her work, sensed her problem, stayed all night and so had a chance to thrash the thing out. She gave the teacher ideas for a school garden and simple problems in manual training (the children could bring the tools from home), and started the idea of a Boy Scout troop. The teacher welcomed the suggestions and when the supervisor came the next time the school yard had gardens, carefully fenced by the boys, plans were under way for a fountain and bird bath, as this was one of the few places where water was abundant, letters had been written for the seeds and this had motivated language; the boy scout master from the county seat came out and the boys were organized, etc. This all carried over into the home life and the parents were delighted, the school was running smoothly as the feeling between the teacher and pupil had been put on a different basis, both teacher and pupils were eager for the visit of the supervisor so that she might see what had been accomplished. This teacher puts her success up to the timely suggestions of the supervisor. The community offered this girl \$1,600 to come back but she had been sought by a desert community where junior high school work was to be started and they wanted such a teacher.

Another teacher, used to the best in the way of supplies, school room, and living conditions in a city system, came to the country and took a one-room school for a year. She felt herself much above the community and was very dissatisfied and disliked to take suggestions from the supervisor about methods which might be better suited to her present environment, as she felt she had had years of teaching in much bigger and better places and did not need the supervision. The community felt her criticism and dissatisfaction and told the supervisor they wanted to get rid of her before the end of the year if possible. To overcome this difficulty the supervisor sent this teacher to a near-by community where the conditions were much worse, the school house much inferior, and the classes of children harder to work with. Here she found an enthusiastic teacher making the best of circumstances, giving her youngsters the best she knew, making their lives brighter by bringing to them rays of her experience with the outside world, etc. Our disgruntled teacher went back to her community determined to make good with both community and children as she realized how much a good teacher had to give to such a far away community. She did make good, and thanked the supervisor for the lesson and the opportunity to make up for her failure."

Out of the numerous instances reported by the county superintendents of the beneficial influence exerted by the rural supervisor on pupils, these two taken from the report of Superintendent A. G. Elmore of Stanislaus County have been selected as characteristic:

"Leland and Merrill were the only eighth grade pupils in a small rural school, and both boys over age—fifteen. Leland was a handsome chap of more than average ability, but through irregular attendance, indifference and lack of home interest, had missed a year or more along the way. Merrill had come from an Oakland school with a transfer for the high eighth grade, but as there was no high eighth in this school he was in the same class with Leland. Either boy was harmless by himself, but together they made a disciplinary problem that was almost more than the teacher could handle.

Many times I tried to talk to them but they evaded all questions and confidences. Then as school was about to close for institution and Thanksgiving, it all came out—they were planning to quit and not come back. They figured that they looked like sixteen years old and that they could say they were and they were going to work. They considered themselves young men and they resented 'being with these kids in a one horse school' as they expressed it.

I told them that if they would come back and do some good work, so that I could recommend them, I would try and see if I could get them into high school at the mid term in February. They replied that the fellows in town could go in then but they would not take anyone from the country schools. I said, if they would promise to do their part I would guarantee to do mine. I then went to Mr. Morris, the principal of the high school, and explained the situation to him. He said, 'Yes, we will give the boys a chance and take them right now if you say so.'

But I thought it was better for the boys to work out their own salvation and prove their good intentions.

The work they did in the next three months not only surprised me, but themselves as well. When the mid term opened, I took them in and introduced them to Mr. Morris who personally helped them to make out their programs, inquired what they wanted to do in athletics and proved himself to be the 'dear old Jim' that he is to all the boys.

Leland was on the honor roll the first quarter, Merrill not until the end of the term.

The next September I was driving along the road when I was hailed by a young fellow on a huge load of hay. I stopped and who should come to talk to me but Leland. I expressed my disappointment that he was not back in high school and he told me he was leaving in three days for Kansas City. Thru his high school work and a correspondence course he had taken he had secured a scholarship in some school of

technology in Kansas City with the prospect of being able to get another scholarship that would take him to the Boston school of technology or to one in Chicago. He was enthusiastic and excited.

The last I heard from him he was doing good work, progressing rapidly and thoroughly enjoying his traveling experiences.

Merrill is still in high school and is a credit to himself and the school.

Angelina was a big, overgrown, untidy girl, without much ability, in the eighth grade of a one teacher school. She did not care about any school work except drawing and she certainly could draw—if she had more originality she would be an artist.

We tried to use her love of drawing as an incentive for her to enter high school, but she would show no interest and assured us that she was only waiting for her sixteenth birthday so she could quit school.

One day she admired the dress I had on and said so much about it that I said, 'Why Angelina, this dress cost only \$1.35 and I made it myself. You could make much prettier clothes for yourself and your sisters if you would only go to high school and take a course in sewing.' She seemed much impressed and the teacher reported an improvement in her school work and in her personal appearance from that time.

The next time I visited that school, I took out samples of sewing and cooking that the high school girls had done and explained to Angelina the advantages of a high school course.

By the time school closed Angelina was quite enthusiastic about going to high school. She worked in the cannery all summer and earned enough to buy some presentable clothes for school and enrolled with the fall class. She is taking English, English Composition, Sewing, Cooking and Drawing, and doing well in all of them. The much needed lessons in foods, balanced meals, cooking and sewing are being given to her family in a very satisfactory way.

At the close of school the high school girls had an exhibition and demonstration of their work and served the foods they had cooked, wearing the clothes they had made. When I saw Angelina, I was astonished. The neat, alert girl I saw there was a different creature from the Angelina of the Cole school. When I realized what a handicap she started with I appreciated how far she had gone in a year.

So many improvements have been made in her home and the whole family has taken a big step forward. Two of her friends, girls who left grammar school two years ago, have now entered high school thru Angelina's interest and influence and are making as marked improvement in themselves and their homes.

Angelina is hoping to become an illustrator for advertisements but I do not know whether she has enough originality for that or not, but whatever else she does or does not do, she is raising the standard of living in her whole neighborhood and that is the most effective kind of Americanization work."

How Superintendents View Supervision.

Every county superintendent finds in rural supervision one means whereby the rural school may be stimulated to do its best to give the pupils an opportunity to be prepared for their places in life. Superintendent Charlotte Cunningham of Shasta County has summarized the matter as follows:

"I consider school supervision has done more to solve the problems of the rural schools than any other recent legislation.

As a school superintendent, I have always deplored the fact that a country child was deprived of the advantages of a city child. For years, city teachers have been supervised and helped in their work. Rural supervision is at last equalizing opportunities of the country and the city child.

While it remains impossible for rural schools to secure properly trained teachers, their improvement during service is imperative. Rural supervision is the only agency whereby this may be accomplished.

Let's make our slogan: 'Give the country child the same advantages as the city child'."

The total cost of rural supervision in 1923-24 was \$320,356, all of which was paid out of funds raised under the provisions of Constitutional Amendment No. 16 and related statutes.

Respectfully submitted,

SAM H. COHN,
Deputy Superintendent.

REPORT OF STATE SUPERVISOR OF ATTENDANCE.

HON. WILL C. WOOD,

Superintendent of Public Instruction.

SIR: The work of the supervisor of school attendance for the period of the school years of 1922-24, in accordance with the directions of the Superintendent of Public Instruction, has included the following:

I. *Continuance of effort to secure a uniformly consistent interpretation of the compulsory education laws of California through assistance given to the superintendents of schools and by furthering the appointments of competent supervisors of attendance in the cities, counties and districts needing them.*

The tabulation which follows was made from replies to a questionnaire sent to the city and county superintendents of schools in April, 1924, and shows the extent to which appointments had been made to that date:

Distribution by Counties.

1. Alameda :
 County—One, full time.
 Cities—Alameda—One, part time.
 Berkeley—One, full time.
 Oakland—Director of Attendance and four full-time and one part-time assistants.
2. Contra Costa :
 County—One, full time.
 City—Richmond—One, full time.
 District—One, part time.
3. Del Norte :
 County—One, part time. Office combined with that of probation officer.
4. El Dorado.
 County—One, part time.
5. Fresno :
 County—Two, full time.
 City—Fresno—One, full time.
 Districts—Two, part time.
6. Glenn :
 County—One, part time. Office combined with that of probation officer.
7. Humboldt :
 City—Eureka—One, full time.
8. Imperial :
 County—One, full time.
9. Kern :
 County—One, part time. Office combined with that of supervisor of physical education.
 City—Bakersfield—One, full time.
 District—One, part time.
10. Kings :
 County—One, full time.
 District—One, part time.
11. Lassen :
 Districts—Two, part time.
12. Los Angeles :
 County—One, full time.
 Cities—Long Beach—One, full time.
 Los Angeles—Director and eighteen full-time assistants.

- Pasadena—Two, full time.
 Pomona—One, part time.
 Santa Monica—One, full time.
 District—Fifteen, seven full time and eight part time.
13. Madera :
 County—One, part time. Office combined with that of probation officer.
 District—One, part time.
14. Merced :
 County—One, part time.
15. Modoc :
 County—One, part time. Office combined with that of probation officer.
16. Monterey :
 County—One, full time.
 District—One, part time.
17. Napa :
 District—Two, part time.
18. Nevada :
 County—One, part time. Office combined with that of probation officer.
 City—Grass Valley—One, part time.
19. Orange :
 County—One, full time.
 City—Santa Ana—One, full time.
20. Plumas :
 County—One, part time.
21. Riverside :
 County—One, full time.
 City—Riverside—One, full time.
 District—One, part time.
22. Sacramento :
 County—One, full time.
 City—Sacramento—Director and two assistants.
23. San Bernardino :
 County—Two, part time. Office combined with that of health work.
 City—San Bernardino—One, full time.
 District—One, part time.
24. San Diego :
 County—One, full time.
 City—San Diego—One, full time.
25. San Francisco :
 City and county—One Director and three full-time assistants.
26. San Joaquin :
 County—One, full time.
 City—Stockton—One, full time.
27. San Luis Obispo :
 County—One, part time. Office combined with that of game warden.
 City—San Luis Obispo—One, combined with that of manual training supervisor.
28. San Mateo :
 Districts—Four, part time.
29. Santa Barbara :
 County—One, part time. Office combined with that of rural supervisor.
 City—Santa Barbara—One, full-time and one part-time assistant.
 District—One, part time.
30. Santa Clara :
 City—Santa Cruz—One, combined with that of probation officer.
 District—One, part time.
31. Santa Cruz :
 City—Santa Cruz—One, combined with that of probation officer.
 District—One, part time.
32. Shasta :
 County—One, part time. Office combined with that of rural supervisor.
 District—One, part time.
33. Siskiyou :
 County—One, part time. Office combined with that of probation officer.

34. Solano:
 County—One, full time. Office combined with that of assistant supervisor of schools.
 City—Vallejo—One, full time.
 District—One, part time.
35. Sonoma:
 County—One, full time.
 Cities—Santa Rosa—One, full time.
 Petaluma—One, part time.
 Districts—Two, part time.
36. Stanislaus:
 County—One, part time.
 City—Modesto—One, part time.
 Districts—Three, part time.
37. Tehama:
 County—One, part time. Office combined with that of health work.
38. Tulare:
 County—One, full time.
 City—Visalia—One, part time.
 Districts—Three, part time.
39. Tuolumne:
 County—One, part time. Office combined with that of school hygiene.
40. Ventura:
 County—One, full time.
 City—Ventura—One, combined with that of school nurse.
 Districts—Four, part time.
41. Yuba:
 County—One, part time. Office combined with that of health work.

California's problem in school attendance being more a rural than an urban one, the emphasis of effort has been placed upon securing supervisors of attendance for the counties rather than upon extension of the service in the cities. If the foregoing listing of appointments were indicated upon a map of the state, it would appear that all the counties south of the Tehachapi are now supplied with county officers as are the counties of the San Joaquin Valley. Of the coast counties, those from San Diego northward to Monterey, inclusive, have made appointments, and also San Francisco, Sonoma and Del Norte. The bay counties, excepting San Mateo and Marin, are supplied. In the Sacramento Valley, appointments have been few. Of this group, Butte, Yolo, Colusa and Placer have immediate need of full-time officers. The same is true of Napa, San Benito, Lassen, Humboldt, Mendocino and Modoc. The remaining counties, mountainous ones with lesser population, do not need full-time attendance officers, but would probably be best served by combining the work of school attendance with the duties of a public health nurse.

Summarizing, the appointments made are as follows:

| | |
|--|----|
| Counties with full-time supervisors of attendance..... | 19 |
| Counties with part-time supervisors of attendance..... | 17 |
| Counties with city and district supervisors only..... | 5 |
| Counties with no attendance officers of any kind..... | 17 |
| Total..... | 58 |

The counties without attendance officers are as follows: Alpine, Amador, Butte, Colusa, Calaveras, Inyo, Lake, Mariposa, Mendocino, Mono, Placer, San Benito, Sierra, Trinity, Yolo, Marin and Sutter.

Elsewhere in this report figures are given on school attendance. They are expressed as *average daily attendance* (derived by dividing the aggregate of days of individual attendance in each district by the actual number of days taught in that district) and as *state enrollment*, which represents the actual number of pupils enrolled in the various types of public schools during a school year, each pupil being counted but once, but counted if in attendance for only one day.

These figures, while valuable and necessary for the apportionment of school funds, are inadequate as a measure of the enforcement of school attendance because (1) the state enrollment is not given in its relation to school age population; (2) the state enrollment is classified by type of school attended and not by the age groups governed by school attendance laws; the elementary enrollment, for instance, including children under eight years of age (the minimum compulsory age), and the high school enrollment, including all pupils in attendance whether beyond the maximum compulsory attendance age or not; and (3) comparison between the average daily attendance and the enrollment in any district must be interpreted in the light of local conditions to have any value as a test of efficiency. These conditions can not be stated in all their complexities. An average daily attendance which is high percentage of the enrollment may mean, on the one hand, that much effort has resulted in regular attendance, or it may mean, on the other hand, that the "difficult" children and the itinerants, whose stay in the district it was known would be brief, were not enrolled. Conversely, a low percentage of attendance in a school may mean poor attendance work or it may mean the best of effort in a community of varying population. Without a comprehensive continuous school age census with which the school register figures can be compared, there can be no reliable statistics on the efficacy of the compulsory education laws.

An effort has been made to have the school register more indicative of attendance conditions. A column has been added whose entries will throw into relief the times of absence of each pupil enrolled. The total days of absence added to the total days of attendance will give the actual days of enrollment. These figures taken in relation to the days that school is maintained should focus attention upon continuity of attendance.

Respecting the appointments of supervisors of attendance, the chief accomplishment lies in the improvement of personnel. This would appear to be due to a better understanding of the scope and value of attendance on the part of the superintendents of schools rather than to any increase in requirements of the supervisor of attendance credential set by the State Board of Education.

The day of the truant officer is definitely passing, although he may still be found here and there doing petty police duty. His place is being taken by the person who, first of all, is capable of interpreting the public schools to parents, to boys and girls and to the public; who can interpret a child's social and industrial environment to his teacher and who can present the enforcement of school attendance to the public as an enterprise calling for the best of community effort.

No county having put on a full-time supervisor of attendance fully certificated for the work, has discontinued the service. In each instance

it has been found to "pay" not only in increased average daily attendance and augmented school funds, but also in better school morale.

II. *The making out and distribution of forms for taking the annual registration of minors as required by section 1662 of the Political Code.*

In the fall of 1922, new forms for the registration were prescribed. They were made as simple as conformity with legal requirements and endeavor to make expenditure worth while, would permit. The same forms were used in 1923.

The law, as a state-wide instrument for the registration of minors, is a dead letter. Los Angeles and a few of the smaller cities have proved to themselves the value of a yearly count of their school age population. These places would no doubt continue the work even if the law were repealed. Other places need a registration but have never done the work well enough to profit by its possibilities.

The weakness of the present law lies chiefly in placing the responsibility for registering children with the parents and in fixing no penalty for failure to comply with the law.

Knowing the value of a complete registration and the inability of the present law to accomplish such, a bill was introduced in the legislature of 1923 to amend the section to effectiveness. This bill passed both houses, but was vetoed by the Governor. A second bill, carrying a repeal of the present registration of minors law, was then introduced and was passed by both houses, but it failed to receive the Governor's signature. Further effort to amend should be made in the legislature of 1925.

III. *The distribution of working permit forms and the filing of duplicates of all permits granted and of reports on violation of the Child Labor Law sent to the Superintendent of Public Instruction by the Commissioner of the Bureau of Labor Statistics.*

No change has been made in the working permit forms since 1921. It is recommended, however, that both forms and procedure used in the granting of working permits be made as nearly uniform as possible for minors coming under the provisions of either the part-time or the full-time compulsory education law. In view of the fact that all employed minors are required to attend the part-time school, it is obviously desirable that there be no division of jurisdiction in matters pertaining to the related employment. Any amendment to either law that may be introduced in the legislature of 1925 should include this objective.

The following tables give the number of working permits issued in 1922-23 and in 1923-24 as reported by the city and county superintendents of schools to the Superintendent of Public Instruction, and by him in turn to the Commissioner of the Bureau of Labor Statistics.

Number of Permits to Work Issued to Minors, 1922-23.

| Counties | 14 years of age | 15 years of age | Between the ages of 14 and 16 to work during out of school hours |

IV. *The establishing and maintaining of schools for the children of migratory workers in the rural schools of the state.*

A report on this project, as carried on from September, 1921, to January, 1923, has been filed as a separate bulletin. It gives in detail the procedure in setting up and maintaining schools for migratory children in accordance with an act of the legislature of 1921. It describes the schools maintained in various harvest centers, particularly walnuts, cotton and asparagus, and states certain conclusions reached through the experiment.

The conclusion of first importance and the one which has determined the trend of effort subsequent to the closing of the first experimental schools is that for the school attendance of the children of migratory laborers a separate system of state schools is neither necessary nor desirable.

It has been found that under certain conditions of preparation and cooperation the existing public school system can be stretched to make room for the migratory children during their successive periods of stay in different districts, and that this can be done without undue financial burden upon any one district and without school confusion for the resident children.

The conditions are:

(1) Each county subject to seasonal influx of family labor must have the services of a competent full-time supervisor of attendance who, through cooperation with growers' associations, farm advisers and labor agencies, can anticipate the approximate number of children needing additional school facilities and can assist the trustees in providing them; who can make the compulsory education law known to parents and employers and who can interpret the emergency needs of a district to the county superintendent of schools.

(2) The financial burden should be shared by district and county—the district providing building, equipment and supplies, and the county (from the supervision and emergency fund) paying the salaries of additional teachers at least for the first year. In the initial year, when there has been no preceding increased attendance to furnish additional school funds, the school building has sometimes proved a financial difficulty and has led to the use of tents, partitioned-off ends of warehouses, empty houses and the like. At times, the growers have come to the rescue and provided housing. In fact, the most successful schools have had this assistance. Such aid is entirely optional with the growers, but when it has been given, school attendance has been increased by their interest and a better school has attracted and held better labor.

After the first year or two, the individual districts profiting by the returns on increased average daily attendance are able to carry on the work as part of the regular school business of the district and to make budgetary provision therefor.

Assistance to the district from the supervision and emergency fund is legitimate for all districts having an average daily attendance of less than five hundred and is usually available.

(3) There should be separate ungraded classes for all children who can not slip easily into the regular school because of language handicap or retardation. Individual instruction serves such children best and

can be more easily given in an ungraded class. Teachers trained in Americanization work have been most successful.

(4) When the agricultural work is very light and without hazards, there should be an adjusted school day beginning not later than the field work. This provides for the whole family leaving the camp at the same time, the adults going to the field and the children to school. It safeguards the children against working before school and from being left alone at the camp. It also means that the school day is over when the midday meal is ready. It provides also that the children may work in the afternoons. The last is not a concession to child labor; it is a concession to labor-camp life. The whole adjustment is made in view of what seems best for the child in relation to his camp life and arranges that when he is not in school he is with his family. The school session comes first and is a full session meeting regular requirements of time for study and recreation. The hours remaining for work can not then exceed five.

(5) There should be a state representative who cooperates with county superintendents of schools, county supervisors of attendance, growers' associations and labor supply agencies in making the enforcement of school attendance law uniform, and in demonstrating to the heads of families that this law is operative in every district in the state and can not be evaded by changing camp.

The second conclusion reached was that, while the school attendance of migratory children could be secured while in each harvest, their education by such start-and-stop method was a doubtful accomplishment. Even with the hundred per cent efficiency that would enroll the child upon arrival and keep him in attendance until departure, the time lost in transit between camps and the confusion incident to changes in teachers, school building, playgrounds and the like, would allow for little school progress.

It would appear that the problem of the education of migratory children must be approached not only with the mechanics of their school attendance in mind, but with the whole question of their migration as well. To this end it is recommended that the State Department of Education cooperate to the fullest degree possible with any effort to lessen the areas of migration of the "followers of the fruit."

Violations of Child Labor Law.

The Bureau of Labor Statistics has reported to the Superintendent of Public Instruction the following complaints of violation of the Child Labor Law received by his office during the school year 1923-24.

These have been classified according to type of violation, but it should be understood that the groups are not mutually exclusive:

| | |
|--|-----|
| Employed without permits..... | 63 |
| Employed at night..... | 21 |
| Employed in prohibited occupations..... | 8 |
| Employed in excess of eight hours per day..... | 32 |
| Employed under minimum age..... | 7 |
| Unclassified | 56 |
| Total..... | 187 |

Immigrant Children.

The United States Bureau of Immigration reports to the Superintendent of Public Instruction the names, ages and addresses of all children under 16 years of age whose destination is indicated as California. These are in turn reported to the persons in charge of school attendance in the prospective homes of the little immigrants. During 1922-24, the following, segregated by nationalities, were reported:

| 1922-23 | | 1923-24 | |
|---------------|-------|--------------|-------|
| English | 98 | English | 67 |
| German | 74 | German | 140 |
| Dutch | 15 | Dutch | 9 |
| Scandinavian | 26 | Scandinavian | 61 |
| Magyar | 2 | Magyar | 1 |
| Italian | 92 | Italian | 82 |

REPORT OF THE ASSISTANT STATE SUPERINTENDENT OF PUBLIC INSTRUCTION.

In Charge of Adult Education.

HON. WILL C. WOOD,

Superintendent of Public Instruction.

SIR: In an interesting address before the British Institute of Adult Education, the Archbishop of York said:

"Society, after all, does not mean merely the arena in which individuals are free to develop themselves. It ought to mean a community which makes the best of its common life, drawing out the best in its members and giving them the best that has been treasured in the records of human thought, achievement and experience. The fulfillment of this ideal depends on education."

And again:

"Adult education must be the center of the whole educational system, the goal to which all its parts converge. At present it is largely regarded as a by-product. We give our main thought and care to the education of the young, to the origins rather than the ends of education * * *. All education—elementary, secondary, university—must be held together by one question, dominant at every stage: 'How can the largest number of adult citizens become and continue to be educated men and women?' "

This newer conception of education is as yet scarcely given general recognition anywhere. We still are committed to the theory that all formal learning ends when the individual sets out to earn a living, marries and becomes a part of a new family unit.

The exigencies of earning that living, however, established one kind of adult education—namely, vocational education—and so long as a man needed a special skill in order to get or hold a position he attended a class organized to teach the subject. Therefore, education for adults which has the definite aim of increasing their earning capacity has become generally accepted. The wider purpose of education as conceived by Aristotle, "To help men to use their leisure well," or by Plato as "The training for citizenship," has scarcely found its rightful place in our scheme.

Certain beginnings have been made in that direction. The United States of America, with its rapidly increasing foreign-born population, millions of whom could not speak the English language, had a specific impulse to adult education. That impulse, so strengthened by the war, has now given Americanization, or adult immigrant education, a firm footing in the public schools. California was well in the vanguard in this movement and because, on January 1, 1925, California will have had for five years a Department of Adult Education charged with the instruction of foreign-born adults, it seems suitable that the biennial report to the superintendent from the director of that department

should be a summary of the work from the beginning instead of a record of the details of the past two years.

This report, therefore, will review briefly the needs for such education in California, the efforts that have been made to meet the need and the general aims and purposes of the department, both for the present and the future.

Foreign-born Population in California.

California has had as much need as any state to offer educational opportunity to foreign adults. The 1910 census gave her a foreign population of 586,432; the 1920 census 805,049. The nationality showing the largest numbers in both 1910 and 1920 were Italians, most of whom came to this country with little or no knowledge of English.

In 1920, in California, there were:

| | |
|------------|--------|
| Italians | 88,502 |
| Mexicans | 86,610 |
| Germans | 67,180 |
| English | 58,572 |
| Canadians | 57,256 |
| Irish | 45,308 |
| Swedish | 31,925 |
| Russian | 27,224 |
| Portuguese | 24,517 |
| French | 20,387 |

An additional problem is created by those persons in the state who can not read or write a single word in any language, who can not even write their own names. In 1920 there were 95,592 such in California, of whom 5359 were native-born Americans.

California has 11 cities with a foreign-born population of over 5000. The 1920 census figures are as follows:

| | | |
|---------------|---------|--------------|
| San Francisco | 140,200 | foreign-born |
| Los Angeles | 112,057 | foreign-born |
| Oakland | 45,162 | foreign-born |
| San Diego | 13,295 | foreign-born |
| Sacramento | 10,873 | foreign-born |
| Berkeley | 9,573 | foreign-born |
| Fresno | 8,552 | foreign-born |
| San Jose | 7,820 | foreign-born |
| Long Beach | 6,799 | foreign-born |
| Pasadena | 6,785 | foreign-born |
| Alameda | 5,877 | foreign-born |

It is not only in the cities that one finds need for teaching English. There are vast areas which have no urban centers large enough to have city school systems with a school superintendent, where the union high schools take the children from all the country schools in the vicinity. This constitutes California's real educational problem for foreign-born adults. In his book, "The Schooling of the Immigrant," F. V. Thompson estimates that the foreign adult living in rural or semirural sections of the United States has one-eighth as much opportunity to become an

American as his countryman who settles in the city. If America is to avoid the overurbanization of the immigrant, the public schools of the country must find some way of offering more nearly equal opportunity. In California, 145 union high schools outside the cities report a sufficient number of adults unable to speak English, living in their districts, to justify at least one class. To reach this rural population has been the particular task of the state department of education.

In the cities the foreign-born are employed much as they are in cities throughout the United States—in laundries, canneries, needlework factories, ship building, and wherever large numbers of employees are found. They do the roughest and most unskilled work as well as that of the most highly trained artisans. The potteries at Lincoln are typical. In the yard, hauling rubbish, carrying heavy irons, lifting and heaving, are the unskilled laborers. There, one does not hear English spoken. On the first floors, the bookkeepers, clerks, messengers boys, foremen, managers, are all American. Farther up, the molders, workers in the materials of the pottery are also American. But on the top floor, where the creative artists are at work—the designers and modelers and sculptors—there one hears again the foreign tongue and English only with an accent.

In the country districts, one finds the farm laborer and very often landed proprietor a man of foreign birth. As a proprietor, he is not always making a success of it, for he does not know American farm methods, land is too expensive to be worked in small acreage and machinery can not be purchased by the man of limited capital. Even the extreme frugality to which he is accustomed will not bring him through a bad crop season which leaves no earnings and many debts at the end of the year. The lot of the farm laborer is not altogether to be envied, either. In many cases, the short season does not afford sufficient work in one place to support a family throughout the year, and it is necessary to follow the crops up and down the state in order to find anything like steady employment. The same family may pick cotton in Imperial Valley, thin beets in San Bernardino County, harvest raisins in Fresno County and pick hops in Yuba County. Covering over a thousand miles a year in search of a living affords little leisure for education. It is this group, variously estimated from 15,000 to 40,000 families, which the public school scarcely reaches at all. Whatever effort this department has made has been expended in cooperating with the state supervisor of attendance in organizing the migratory school to provide for the children. For the adults it has seemed almost hopeless.

Other industries than agriculture in the less congested parts of the state call for the foreign-born worker—the mines and quarries in Amador, Calaveras and Mariposa counties, the fishing in San Francisco, Monterey and San Pedro bays, the lumbering and saw mills in Lassen, Mendocino, Humboldt and Siskiyou counties, the cement works in San Bernardino County, the sugar refinery at Crockett, the smelters at Selby and elsewhere in Contra Costa County. The railroads with their yards, construction work and section workers bring in the Mexican laborer and the Irish foreman—one of the amusing instances of the human diversity covered by the term "foreign-born." And always in California one finds the big construction work by which a new state

prepares for a greater and greater population. The new Edison dam above Lake Huntington, where 1500 to 5000 men are employed, uses a large proportion of foreign-born workers.

The following table gives the ten counties with the largest number of foreign adults, with the nationalities predominating:

| | Foreign adults | |
|----------------------|-------------------|--|
| Los Angeles ----- | 161,787 | Mexican, Canadian, English, German, Russian |
| San Francisco ----- | 141,124 | Italian, German, Irish, English, French |
| Alameda ----- | 73,842 | Portuguese, German, Italian, English, Irish |
| Fresno ----- | 28,102 | Russian, Armenian, Mexican, Italian, Swedish |
| Santa Clara ----- | 21,949 | Italian, Portuguese, German, English, Canadian |
| Sacramento ----- | 19,265 | Italian, English, German, Canadian, Irish |
| San Diego ----- | 19,185 | Mexican, English, Canadian, German, Swedish |
| San Joaquin ----- | 18,364 | Italian, German, Mexican, Canadian, Russian |
| Contra Costa ----- | 14,583 | Italian, Portuguese, Irish, English, Mexican |
| San Bernardino ----- | 12,565 | Mexican, Canadian, English, German, Swedish |

Establishing a State Department of Immigrant Education.

In January, 1920, California established a Department of Adult Education in the State Department of Education, and an Assistant State Superintendent of Public Instruction was employed to take charge of this work. However, this was not the beginning of immigrant education in the state. The Commission of Immigration and Housing, established by the legislature of 1913, had given serious consideration to the education of the foreign adult. The commission had made surveys of a number of cities where classes in English were held and reported on the unsatisfactory character of the teaching. Through their departments of camp inspection and the information bureau and complaint offices in San Francisco, Sacramento, Fresno and Los Angeles, they had gathered statistics showing the need for more American contacts and educational opportunity on the part of the foreigner. Most important of all, the commission prepared and was responsible for the Home Teacher bill, a law which made possible one home teacher in every school where there were 500 or more children; the duties of this teacher being confined to instruction and assistance of the foreign-born mother, who is the most neglected of all the members of the foreign community. The commission also printed and distributed the first set of lessons for use in these mothers' classes, and gave every possible encouragement to their author, Mrs. Amanda Mathews Chase, who made the home teacher a reality by giving over a year without salary to show the value of this new kind of school teacher. More will be said in another place of the development of the work of the home teacher.

When the State Superintendent of Public Instruction recognized the importance of giving official recognition to immigrant education, he was without funds, and the Commission of Immigration and Housing transferred to him a sufficient part of its budget to set up the new department and pay a salary to the new assistant state superintendent. The superintendent took over to this new post from the Commission of Immigration and Housing the Director of Immigration Education, who had been carrying on the propaganda and investigation in this field for a year and a half.

Before the year was out, it was evident that there was a distinct advantage in working inside the school system. The fact that a program

is official gives it sanction which it never has otherwise. Although there was not more real authority nor new legislation, the administrators in the schools gave a more sympathetic ear to the appeal to make provision in the budget for night schools. That the State Superintendent of Public Instruction was taking an aggressive attitude on the question changed the situation instantly. Throughout, the interest and leadership of the state superintendent has been an important factor in the growth of the work.

This does not mean that the lethargy, indifference and even prejudice of communities and school boards were easily overcome, or that this work was given any place comparable to that occupied by the education of children. In fact, the reaction from the war and the stir it had made for Americanization had already set in, and the old slogans "Why should we spend money on the foreigners who do not pay taxes?" or "If we spend it for night schools we are depriving our children," were invoked by the native-born American, whose training for citizenship had not taught him that the only safeguard for democracy is an educated adult population, that everyone pays taxes, whether he owns a house or rents a tenement, and that a new educational demand does not require abandoning old responsibilities equally important. A world that had been organizing itself to make sacrifices for war was resentful at the necessity of making sacrifices for peace.

Improving the Teaching Method.

In 1920 there were already many cities in the state offering classes in English and citizenship. One city, Los Angeles, on the advice of the Commission of Immigration and Housing, had employed a trained director for this work, who carried on teacher-training courses at the university in order to give the teachers on her staff some knowledge of the technique of teaching English as a modern language. Other cities, like San Jose and San Francisco, had had citizenship, or English classes for many years, but with a few rare exceptions practically all were taught by untrained teachers whose instruction of adults was patterned after the instruction of children, with little or no concession to the maturity or previous education of the students.

The first six months, therefore, were devoted to making plans for better teaching. In fact, all the work of the department falls into the two divisions of improving the method and extending the field. In improving the method, the first task was to see that teachers could get practical help. During 1920 the Commission of Immigration and Housing was devoting its attention to community organization as the best way to bring about the assimilation of the foreign-born. In the promotion of this task the Commission had the cooperation of the extension division of the University of California. As the schools are the natural center for any community organization, four training courses for teachers were given at Los Angeles, Fresno, Oakland and San Francisco, which at once interpreted the background of the foreigner and suggested a plan for his orientation in American life. Although teachers were in the majority, these extension courses were well attended by social workers, club women, business men and other representatives of the native-born. They served admirably to create a new attitude toward the whole problem and to weld together all the forces working for the amelioration of the difficult conditions which surround the newcomer.

An elementary teacher who successfully completed all the work of one of these institutes was granted a special credential for teaching foreign adults by the State Board of Education.

This was the beginning of a requirement of systematic training which, as years went on, took more definite shape. In the beginning most of the classes in the cities were conducted on the elementary basis, thus emphasizing the childish character of the work. With the enactment of necessary legislation and on the insistence of the assistant state superintendent in charge, practically every class in the state has been changed over and is administered as secondary education.

This was not easy of accomplishment, for in the larger cities it required a revolution in bookkeeping and other administrative arrangements. Superintendents had to spend many hours with the assistant state superintendent, rearranging schedules and working over probable financial and professional gains, before they could make the necessary adjustments. This was done, not because there is any closer relation between the work of the night school and the high school than between the work of the grades and the high school. Adult education is as separate and distinct as elementary education. Experience showed that it is more easily financed in this way, more economically administered and can demand better equipped teachers, especially prepared for this particular undertaking. At present, no one may teach the foreign adult who has not had at least two years' training beyond the high school and four years' teaching experience, in addition to six semester hours in especially designated courses. These courses cover a thorough study of methods of teaching English, with a review of the whole field of modern language instruction and the careful preparation of practical lessons for use in the classes. In every case, demonstration and cadet teaching supplement the lecture. In addition to teaching methods, these courses deal with the social and anthropological side of the immigration question—a study of migration and assimilation as a world-old problem and the specific causes and results of the enormous migrations to the American continent and the United States in particular.

For the sake of bringing to the teacher a more critical attitude and greater familiarity with America, a course in American political institutions is recommended. This deals with as many controversial questions in American life as can be discussed, and prepares the teacher in turn to deal with the questions asked and unasked which come to the mind of any stranger who has not our emotional bias in favor of the traditions of our own country. It seems logical that one who is to induct the foreigner into America and teach him English should understand English, the immigrant and America. And the force of that logic soon became apparent to the superintendents and principals, for the trained teacher held her classes and the untrained lost them after a few weeks. Adult education presents the acid test of our effectiveness, for there are no compulsory attendance officers to hold our students to the school.

Teacher-Training Courses.

The greatest help in teacher-training came from the cooperation of the universities. The private institutions have been of inestimable value and the state university in particular has rendered unique service.

The first community organization institutes were followed up during the summer by sessions at both Berkeley and Los Angeles, and from that time special courses, designated by the assistant state superintendent, have been offered at all the summer sessions. The assistant state superintendent has been invited to give courses whenever possible and for three summers accepted, in order to organize the method material and get in close touch with the teachers from all over the state. Over four hundred teachers were met in these three summer sessions.

The greatest contribution, however, has come from the extension division of the state university. During the spring of 1921, the assistant state superintendent held numerous conferences with a committee appointed by the president of the university to develop a method by which the university could cooperate with the schools for Americanization work. In the fall of 1922 the extension division employed an expert in immigrant education to give training courses to teachers who were already engaged in teaching foreign adults, wherever enough could be gathered together to warrant such a course. During the preceding year, the assistant state superintendent had held short institutes for all the teachers of foreign adults in the state, meeting in San Diego, Los Angeles, Tulare, Hanford, Fresno, Stockton, Sacramento and San Francisco. Some of these institutes lasted for two weeks and the response was so general, and demands for a repetition of this plan so numerous, that it was decided to establish a less haphazard arrangement following the same general plan. Miss Ethel Swain, whom the university chose for this position, has been giving courses for two years and is again engaged for 1924-25. Her classes have been held in San Francisco, San Jose, Mountain View, Stockton, Madera, Fresno, Kerman, Reedley, Hanford, Tulare, Bakersfield, Los Angeles, Long Beach, San Pedro, Santa Ana, Fullerton and Santa Barbara. The particular advantage of this plan comes from helping the teacher while she is at work. Every difficulty can be brought to the course for discussion. Miss Swain can visit the schools and use all the classes for demonstration and helpful criticism. The university can not be sufficiently commended for this splendid service which it has rendered to the public schools of the state.

That results are measurable here will be shown from the fact that whereas in 1919-20 only a small handful of teachers in Los Angeles had had any training for this work, in 1923-24 out of 895 classes maintained throughout the state, 85 per cent had trained teachers, and since 1920, including state and private universities as well as the teachers colleges at San Jose and San Francisco, extension summer sessions, upwards of 3000 teachers have taken the required training courses. More than half of these were already holding positions which they wanted to fill more efficiently.

Teachers' Organizations.

The most satisfactory part of the work of state supervision comes from the contact with the teachers. By far the larger number have chosen this teaching because of their keen interest in it, rather than for the remuneration it brings. They are prodigal of their time and effort, and ever ready to join a conference to discover new and better ways. For this reason, teachers' organizations in this department

have been particularly successful. The Alameda County organization was started soon after the assistant superintendent began work. Los Angeles city had organized without assistance and included all evening school teachers; later the San Joaquin Valley and southern California, and Santa Clara County, were organized. These groups hold most instructive meetings in their own localities and keep up an esprit de corps and a more or less continuous discussion of the best that has been formulated by experts all over the United States. Growing out of the summer session at San Jose and now carried on by these section organizations is the publication of a most valuable magazine—the Community Exchange Bulletin. Each section organization edits the bulletin once each year, so that all parts of the state know of the successful experiments elsewhere, the teachers in a given section are greatly stimulated by working together and much of the feeling of isolation which all experienced in the old days has been eliminated.

Organization and Expansion of Immigrant Education in Cities.

The training of teachers and the extension of work to new centers of activity had to go on side by side. For the first year much time was spent in the cities meeting with superintendents and boards of education, urging them to recognize the importance of adult education, and in planning adequate budgets to support the work. It had been the custom in the cities for the most part to carry on these classes in the evening high schools where the other night classes were held, such as the vocational and regular high school work for the native-born. The state department believed that this would reach only those foreign people who had already made a large number of American contacts and were no longer timid about going into new places. For those people who lived in foreign neighborhoods such a program would not serve. Boards of education were therefore urged to open classes in foreign communities. If no school building was conveniently available, the classes were put in stores or any other place that the board could rent.

Adult education demands the greatest flexibility in school administration. Former Los Angeles city superintendent, Dr. Shiels, was once heard to say that the poorest place to hold a night school was in a school, and the poorest time to hold it was at night. The idea that a class for foreign adults should be held in any place, and at any time that the people would attend it, was given wide circulation throughout the state. It was also apparent that the night high school principal who is engaging teachers to do all varieties of night school work is not always the best judge of a good Americanization teacher, nor is it satisfactory to leave the decision as to the setting up of classes for this work to a superintendent of schools who has too many administrative duties to undertake the special kind of organization. School boards were therefore urged to appoint directors of Americanization, whose duty it should be to discover just those neighborhoods within a city where the largest attendance could be counted upon and to find just the right teacher to deal with the particular foreign group. A very good teacher may be unsuccessful in teaching Mexicans because her temperament fits her to deal with Armenians or Japanese or North

Europeans. Without this kind of administrative direction a class is started in one school and continues year after year, although a large part of the foreign population may have moved to a new neighborhood. The director's salary is more than covered by the economy effected in efficient supervision.

Los Angeles city has developed the best administrative program of any city in the state. As the first to have a director of immigrant education, it later added a specialist in teacher-training who had unusual skill in the preparation of lesson material. This assistant in the department keeps in constant touch with all of the classes and knows precisely the kind of lessons that will be suitable for the needs of the individual students. She prepares and sends out to the teachers these lessons, which obviously have a timeliness and a local application that could not be found in any text book. Text material in the Los Angeles city schools is otherwise well cared for through the Los Angeles school library, where a librarian is especially assigned to the distribution of books for these classes. In this way it is possible to have the widest variety of texts. A class may use one or two sets of textbooks for a few weeks and return them to the library and get fresh material. In addition to the texts and lesson leaflets which are distributed, the librarian makes a collection of pictures, charts and other graphic supplements to the lessons, as well as patterns and drills and sample materials for the women's classes.

Since the director of immigrant education does no teaching and has no other duties outside the department, she is able to make the work of every teacher as effective as possible. In this particular instance, the director, Miss Flora D. Smith, an executive of marked ability with a rare vision, has the advantage of having had all of her experience and training qualify her especially for this type of work. She has the confidence of her staff because of their assurance that she can do all of the work herself. Where the director has other duties, such as acting as the principal of the evening high school or supervising part-time work, there is bound to be some loss of efficiency and such a high degree of precision is not possible.

There are 33 cities in California large enough to have city superintendents in charge of the entire system, elementary and secondary. In all of these cities there is some foreign population. In 1920-21, after one year of state supervision, 22 of these cities offered classes for foreign adults; in 1921-22, 28; in 1922-23 there were 25, and in 1923-24 there are again 28. The cities which do not offer classes are: Vallejo, San Luis Obispo, Oroville and Grass Valley. (For the completed list, see the statistics appended.)

The number of classes offered has shown a steady increase. By the end of the school year of 1921, there were 269 classes in city districts. In 1922, 402. This number dropped in 1923 to 398 and has increased in 1924 to 591. The increase in enrollment has been even greater than the increase in number of classes. By the end of 1921, there were 9088 people enrolled in these classes; in 1922, 14,741; in 1923, 21,162; in 1924, 30,566. In the year 1922-23 there was spent in the cities and high schools of California for immigrant education \$288,759.15; in 1923-24 there was spent \$374,632. The increased efficiency is shown

by the fact that the cities handled an increase of 48 per cent in the enrollment in 1923-24.

Organization and Expansion of Immigrant Education in the High School Districts.

Since the first year, the state department has directed its efforts most vigorously toward the organization of classes in the country districts. Before 1920, practically none of the high schools outside the city systems were offering classes in English or citizenship. There were a few straggling classes held in union high school buildings attended by more progressive foreign adults who lived near enough to the high school to make attendance possible. The legislation of 1919 providing maintenance for evening high school classes gave great encouragement to all adult education. By the end of the school year 1920-21, 35 high schools were offering classes; in 1922, 52; in 1923, 72; in 1924, 76. The organization of the high school work has been the most satisfactory attempt at rural adult education in this country. Whereas, in the beginning, all of these classes were held in the high school building, it was soon discovered that the foreign colonies are usually far from the center of the high school district where the high school building is to be found. Union high schools usually include in their districts from five to twenty-five elementary school districts. The elementary school is familiar to the foreigner and not so imposing as to discourage his attendance. The little country school could not support a night school, but the union high school is justified in setting up classes out in the country wherever at least fifteen people can be enrolled. This makes it possible for the high school to employ a full-time director of adult education. This director gets in touch with each elementary school in the high school union. He visits the homes of the children where English is not spoken, searches out the leader of the foreign colony and organizes classes at a time and place satisfactory to the foreign people.

As it is usually necessary to employ the country school teacher to carry on these classes, the director must prepare the lesson material and give the teacher the necessary training and supervision to make her work a success. By keeping in close touch with all the leaders amongst the foreigners themselves, the director is able to discover whether or not the instruction given is practical and suitable. These directors of immigrant education in the union high schools have become the guides and leaders of the foreign colonies. They come to know every foreign family throughout the entire countryside. As they drive about the country roads, they are continually stopped and asked questions and presented with the most personal and difficult problems. In some districts, as in Tulare, the director, in addition to his adult education duties, has been most valuable in cementing a friendly relation between the elementary and the high schools and in insuring a 100 per cent enrollment from the eighth grades of the grammar schools into the high school.

The most hopeful aspects of the Americanization work are developed in these rural communities. The intimate understanding of the foreigner which the trained director in the high school is able to acquire makes it possible for him to organize around the school much of the

social life of the community. The foreigner makes his contribution to this social life as he does nowhere else in America. The school is more grown-up in its manner than it can become in the city because it bears none of the day school traditions. It sometimes happens that a country school has a larger attendance at night than it has in the daytime. The moving picture machine and other necessary equipment is bought by the students. The school house is their club and general meeting place, and in the midst of the freedom and ease of association English is readily taught. One by one each nationality has been conquered by this method. In the beginning it was said that only the most ambitious groups could be reached in the rural districts. The long hours of work for the farmer would make it impossible for him to attend school. It was a familiar report from the board of high school trustees or high school principal, "We have Portuguese dairymen in this district, so it is no use opening a night school." However, after successive night schools were opened and attended almost wholly by Portuguese dairymen, the practical answer was given to the theory that no one will attend school in the evening who has to get up at three in the morning and begin milking cows. Somehow the dairymen found a way, when the social activities were made sufficiently engaging and the English sufficiently practical.

There is no more difficult nor important task than continuing to urge high school boards and principals to undertake this rural adult education. There are still 69 high school districts where classes should be offered. It is, however, time-consuming for the assistant state superintendent. It is usually necessary to meet three or four times with the high school principal and two or three times with the board of trustees before anyone is convinced that an experiment can be made and a trained director engaged, and even after a most successful year with a skilled teacher in charge the cry of economy in the district may frighten the board into abandoning the work.

The figure for the year 1924 which shows little increase over 1923 does not mean that no new schools have been started. It does mean that 18 districts were inoculated with the general panic and closed their classes. It is encouraging that even in so trying a year there were 22 others to open and take the places of the more timid. For the most part, however, these high schools which had undertaken work not only rejected every idea of retrenchment, but have tremendously expanded. In 1921 there were 77 classes in rural districts; in 1922, 140; in 1923, 234; in 1924, 304. The enrollment reflects the steady improvement in teaching. In 1921, 1380 were enrolled; in 1922, 3554; in 1923, 6301; in 1924, 9342—or an increase of 48.1 per cent over the previous year.

In order to urge city boards of education and high school boards of trustees to consider the importance of the adult immigrant education, the assistant state superintendent has visited 114 high schools and 33 cities, making an average of 8 visits per city and 4½ per high school during the four and a half years since the establishment of the office. The increase in enrollment during that period in the cities has been 224 per cent, and in the high schools 530 per cent, making a total increase of from about ten to forty thousand, or 400 per cent, since the work started.

Legislation.

The legislation for immigrant education in California has made much of the increase possible. The first law to be initiated, the Home Teacher Act, was passed in 1915, as mentioned above, at the instigation of the State Commission of Immigration and Housing. The next law passed in 1919, section 2 of the second section of the part-time act, made it compulsory for high school boards to supply classes wherever twenty or more men and women between the ages of 18 and 21, unable to speak, read or write the English language with the proficiency of the sixth grade, could be found within a radius of three miles of the high school building. This law also made it compulsory for such persons to attend these classes when established by the high school. No effort has been made to emphasize the compulsory features of this law, but the high school boards have been more conscious of their duty because of this legislation.

A law similar in wording which deals with the adult over 21 was passed in the 1923 legislature. This requires high school boards to offer classes to adults who can not speak, read and write the English language with the proficiency of the sixth grade wherever twenty persons apply for such classes.

The naturalization law passed at the 1921 legislature, requiring school boards to offer classes wherever twenty-five or more applicants for the first or second papers asked for such classes, rounds out all the legislation necessary to carry on adult immigrant education. The law which provides for the financing of these classes is particularly well planned. It provides (see pages 284 and 289, Sec. 1760, California School Law, 1921 edition) for a bonus of \$80 from the state and \$40 from the county per unit on the first ten units of attendance in night school classes, and \$60 from the state and \$30 from the county on the second ten units of attendance, and \$40 from the state and \$20 from the county on the third ten units of attendance, making a total of \$2,700 a year bonus on the first thirty units of attendance. This is sufficient to pay the salary of the director and insure the district of enough state and county money to pay more than two-thirds and in most cases all of the cost of maintaining such classes.

The law passed in 1923 requiring districts to spend as much money on the maintenance of classes in any school year as was earned in the attendance in the preceding year gives a new hope of permanency to the adult education program.

Just as the class room methods and administration were at first modeled on the elementary and secondary education, so has the legislation followed in the footsteps of other school legislation, rather than making a clean break between the day school for children and the adult classes. At the meeting of the high school principals in the spring of 1923, the assistant state superintendent had a special committee appointed to study all of the legislation which affects adult education and to prepare for some future legislature a law written with the distinctions of adult education well in mind, and creating a separate school department for this work. Such studies are now being made and a report from this committee will be handed in before the 1925 legislature to the superintendent of public instruction and the commissioner of secondary education. Whether it will be deemed wise to

enact legislation at this time is as yet uncertain. The research will be valuable, however, for future action.

It is to the generous financial support from state and county funds and the use of full-time teachers, that California owes her success in immigrant education. These full-time teachers can be specialists, giving all of their thought to the adult aspects of education rather than devoting only a few hours to this work after a full day spent with children. It is, of course, necessary to use many teachers who belong to the latter group, but so long as there is direction and supervision from specialists a high standard can be maintained. In 1920, when the state department was inaugurated, there were very few such full-time teachers; in 1924 there were 134.

Home Teacher.

The home teacher has probably been California's most outstanding contribution to immigrant education in the United States. By this means, the public schools gave their first recognition to the importance of the home as an educational agency. Visiting teachers, adjustment teachers and other public school officials concerned with the adjustment of the child are found in other states, but California was the first state to recognize the mother as the important factor in the home education and to give her public school service, whether her child had shown any maladjustments or not. It is not because the child is under-nourished or tardy or absent or dull or sleepy that the home teacher visits the foreign mother. It is because she is a foreign mother. If her child is doing well in school, so much the better. It is still important that she learn English, have contact with American life and create for the child a home which will not be in conflict with his American education.

As has been said earlier, the home teacher bill was sponsored by the commission of immigration and housing and passed the legislature of 1915. It permits one home teacher for every 500 children in average daily attendance in the public school, and its particular purpose was for home work among the foreign parents. No school district had the temerity to undertake the employment of such teachers for the year 1915-16. In Los Angeles, however, Mrs. Amanda M. Chase gave her services for that year and part of the next in order to show the value of this kind of teaching. It was soon discovered that the home teacher formed a perfect link between the school and the foreign neighborhood. She interpreted the school to the foreign community and the foreign community to the school. All morning long she traveled back to the home of the children in attendance at the school and made friends with the mothers. The ultimate aim of all her contacts was the organization of classes where the mother would learn whatever she needed to know to make her a more effective head of her American household. Sewing classes usually made the first appeal, but a sewing class can soon become an English class.

In the second year both Oakland and Los Angeles were convinced, and employed home teachers. So long as there was not state direction in the department of education, there was some confusion as to the function and work of the home teacher, and an increasing tendency developed to use this person, who seemed the one free agent in the school, for whatever emergency might arise. The assistant state

superintendent, therefore, held a series of conferences with the home teachers, school principals and superintendents, to point out that, although the home teacher did not have the same categorical duties, her work was nevertheless as much defined as that of the fourth grade or kindergarten teacher and it was only by concentrating upon the field of her own work that she could produce results. If she were deflected to attendance problems or other difficulties which arose in the course of the regular school day, she would be doing the work of the principal or the grade teacher and neglecting her own assignments. This idea has now taken firm root. The home teacher does as much visiting in the home as she ever did, but it is all with a definite aim of reaching the largest number of foreign mothers in the community with an education to fit them for American life.

In the city districts the home teacher usually holds classes in the afternoon in the school building. In the morning she visits and holds smaller classes in the home for women who are too shy or too encumbered to go to school. Los Angeles has the largest number of these teachers who are working with the foreign mothers, reporting 49 for the year 1923-24. They work in the neighborhood of the foreign schools, in railroad camps, in congested foreign communities, in model cottages bought by the school in order to demonstrate the best American standards of living under difficult conditions, and they teach on the sidewalk and in the alley as they are making their rounds of the neighborhood, continually answering questions, giving information, straightening out difficulties and serving always as the doorway by which the foreign family may find the agency which it needs at the moment.

During the year 1923-24, San Francisco has made great strides in this field. For many years this city has doubted the efficacy of this type of work. During the past year, however, a program of expansion has been undertaken which has been more than justified by the results. Under the new director of adult education four new home teachers were employed. Care was taken to find well trained women and even in the first year in new fields they were able to show an attendance of more than twenty women a day in each of their classes. What this means to the future citizenship of the native-born children of foreign parents in San Francisco can not be measured.

Oakland, one of the first cities to undertake home teacher work, has not been able to expand with the rapidity of its first hopes. It has, however, furnished expert teachers to other cities in the state where the work was being inaugurated, and is probably responsible for expansion in new places which financial pressure made impossible in Oakland.

Outside the city systems, home teachers, as such, have not been generally employed. The directors of adult education, however, who are giving all of their time to organizing classes for foreign adults under the union high schools usually teach a few mothers' classes in the various elementary school districts in which they are organizing night schools. This gives the school a splendid contact with the foreign home and insures the night school's success.

Education of the non-English Speaking Child.

Just as it was difficult to define the work of the home teacher and keep the emphasis entirely on the adult aspects of her work, so it has never been possible to limit the work of the state department of immigrant education to the adult field. In surveying the state to discover just where the foreign populations live and to advise school boards and high school principals as to the extent and variety of their work, the assistant state superintendent in charge of immigrant education visited the elementary schools in order to learn the number of children who had come from foreign homes. This brought the alarming information that many children were entering our public school system with no ability to speak English; and because the teacher had had little or no preparation in dealing with these children they were rapidly becoming a retardation problem and sitting through the same grade two or three years without acquiring enough of the English language to keep up with the other children. It seemed absurd that a state should be concerned itself with teaching English to adults when the children of those adults in the elementary day schools were not learning English. Studies were made of the advanced grammar school grades and early high school, which brought most convincing figures to show that the foreign child was a laggard in many cases in those subjects which required a wide knowledge of language, and superior in those subjects where language was no handicap. The fact was also revealed that the foreign child dropped out of school at the end of the compulsory attendance age without having made a sufficient number of grades to insure him the education which should be necessary to cope with American conditions.

A less obvious but equally important fact was brought out by these visits to the elementary schools. The mingling of various nationalities, instead of producing a tolerance and understanding and sympathy between unlike peoples, was producing antagonism. The apparent ease with which the English speaking child, forced to make no adaptations, progressed through the schools, and the natural intolerance always displayed by the majority for any unlikeness in the minority, gave to the foreign child a handicap which created more of a barrier than the language. The teacher herself, usually with rather a provincial experience, did not understand how to use the traditions of the Italian, the French, Spanish and Oriental children as a way for enlarging the horizons of her American children and creating an international understanding which might be America's great contribution to world civilization.

At the very beginning, therefore, during the winter of 1920, a conference of representatives of normal schools was called to discuss this problem. Each normal school president sent his representative, and plans for the following year were formulated. Among the best of those plans was an institute to be held by each of the normal schools for its own constituency, in which the normal school faculty would lecture and hold demonstration classes for the teachers in the vicinity who could attend the institute, in order to make them conscious of this rather startling problem. With the cooperation of the assistant state superintendent, the normal schools carried out this program with remarkable enthusiasm. Institutes were held in Sacramento, Fresno,

San Jose and Santa Barbara. Classes of foreign children were taught for the observation of many hundreds of teachers. A discussion of the background of these children and the traditions and culture which they brought and the social significance of a class of mixed nationalities, give the teachers a new point of view about their foreign children, who often up to this time had been considered distinct liabilities.

The assistant state superintendent participated in all of these institutes and offered to do demonstration work in the classrooms of the teachers in attendance. Realizing that with all the other administrative duties only the most haphazard results could be obtained by the assistant state superintendent, an appeal was made to the Commission of Immigration and Housing to assist once more in the educational field and undertake an experiment in the education of the foreign child. To this end Mrs. Grace Stanley was engaged and ten schools throughout southern California were chosen as centers for experimentation. The superintendents and principals agreed to abandon the usual course of study and to give Mrs. Stanley complete freedom in directing the work of the teacher. Monthly conferences were held and material sent out. The school at Cucamonga was chosen as the center for experimentation and methods tried there were recommended in other places.

Before the experiment was completed, Mrs. Stanley became the commissioner of elementary schools and has therefore carried over into her supervision of all the elementary schools in the state the experience which she gained in this special study of one group of foreign children. As a result, it has seemed unnecessary for the assistant state superintendent to further concern herself in the field of elementary education, except with regard to teacher-training for this work. To this end there are three centers of teacher-training with special emphasis on the foreign child in the elementary school. The teachers college at San Jose is developing training for the rural school in the foreign community. Two rural schools are used for the cadet teaching—one at Milpitas and another at Centerville. Here the cadet teacher has an opportunity to discover the way in which the rural school may become the center which is the dominant factor for Americanization in the country.

Although teaching of the child is the first aim, the student teacher soon discovers that you can not teach the child except as a part of his home and environment. She is therefore led out into the community and is forced to bring the parents into the school for active participation in the life of the school. Cleaning up the school grounds, studying better methods of school sanitation, providing hot lunch, helping the parents to become naturalized American citizens—all are included in the technique of elementary teaching for a rural school.

At Fresno one member of the faculty has specialized on the best methods of speaking and reading to foreign children, and by combining supervision of reading in the city schools with her lecture work in the college is able to give demonstration and practice along with theory. It is hoped that this can be expanded to extension work throughout the county and that ultimately no teacher shall be graduated from this institution who has not had thorough training in dealing with the foreign child.

A Model Neighborhood School for Immigrant Education.

An experiment which is more far-reaching in its possibilities than any which has yet been undertaken is the program of the state teachers college in San Francisco. Through the interest of the directors of a settlement in the community, a piece of property was donated to the state to be used as a demonstration center for the best educational methods for a foreign neighborhood. This property, known as the People's Place, in the heart of the Italian community should eventually become a model for all public schools so located. For three years the state has maintained here a kindergarten taught by student teachers from the college. In addition, afternoon classes for mothers and evening classes have been held. A member of the faculty of the teachers college lives on the grounds and has become thoroughly familiar with the life and personnel of the foreign community which surrounds her on every side. Extension training has been given which is quickly reflected in the superior work done by the teachers of adults in the San Francisco city schools, but adult education is not the primary purpose of the use of the demonstration center.

The most important conception for the teacher of a foreign child to get is that she can not teach him apart from his traditions and environment. She can not make a good American out of him by cutting him off at the roots. Rather, she must undertake the most careful and tender transplanting. The teacher must know the child's mother, know her efforts and failures at adjustment in America, have appreciation and sympathy for her reverence for her European birthplace. She must know the social maladjustments in the foreign community in an American city, and recognize the long hours in which the child is being educated out of school in ways that will not contribute to his future citizenship.

For the year 1924-25, therefore, each of the teachers who receives her practice training in this demonstration center will have that work correlated in her courses in methods and in sociology. Field work and other neighborhood studies which will interpret her classroom experience will be assigned. She will help with the afternoon classes for women and with the evening school, not for their own sake but in order to understand better the children she is attempting to teach. Her history and geography will also be concerned with Italy and with comparisons between the life of the old world and the new. It is hoped that the training classes may be extended through the primary grades and that a community building may be built, largely financed by the Italians themselves, for carrying on educational work for the entire community. The city board of education has promised to assign teachers for the adult classes so that the teachers college may have no expense beyond the training of teachers for the elementary schools.

One sees teachers going out from this institution with a new attitude toward education and world citizenship. This is the only real hope for world peace. It must begin with an understanding, painstakingly worked out, which no longer decries everything that is different but finds in that ultimate civilization which man may work out a contribution from all the peoples of the earth.

Throughout the state the education of the foreign child is being given greater attention than heretofore through the appointment of super-

visors of immigrant education under the county superintendents of schools. These supervisors study the elementary schools in the rural districts where foreign children are in attendance, assist the principals to reorganize the classes, so that the foreign child may be given the greatest possible opportunity for practice in oral English, and in addition they stimulate the organization of classes for adults—so that the education of the foreign child and the parent may be carried on *pari passu*.

Citizenship and Classes Preparing for Naturalization.

The culmination of his educational experience comes when the foreign adult receives his American citizenship. Because we regard this as a purely subjective and spontaneous expression of his conscious adjustment, the state department for the first two years made practically no efforts to improve or direct the citizenship training. That most of it was bad and narrowly conceived did not seem a justification for an effort in this direction, since the real citizenship training came through outside contacts rather than through the school room. As the general school work adopted broader ideas and as the English teaching began to function effectively, however, the necessity for giving the foreigner an interpretation of political America became necessary. The classes which prepared for naturalization were doing this to some extent. However, the fact that the teacher was dominated by the knowledge that his success was to be rated by his pupils' ability to make precise answers to precise questions given by the Naturalization Examiner had a tendency to encourage cramming methods rather than the stimulating discussions suitable to an adult class in political science. The student himself, harassed by the terrors of the impending examination, was not in a happy frame of mind to think critically about political and social institutions.

Two plans to improve this condition have been adopted: First of all, in the training of the teacher for immigrant education, a course is now included in American political institutions. This course has been worked out by the assistant state superintendent and discussed with the members of the university faculties who are giving it. It is urged that these classes will not be informational but controversial. All of the problems of American life about which there is question are to be brought up for discussion. With this wider horizon the teacher will be less satisfied with a categorical question and answer class for his own teaching. The state department has provided an outline for the naturalization class, the introduction to which is quoted below, in order to show the point of view of this outline:

Outline of Course in Citizenship for the Use of Teachers in Naturalization Classes.

Note to Teacher:

The teaching of prospective American citizens preparing for their examinations affords an opportunity for the teacher to enlarge his own ideas of government and to give searching inquiry to his own prejudices and convictions.

No teacher can give genuine leadership in this field who is not studying himself and constantly modifying and adjusting his own opinions in the light of new facts and experiences. It is only the teacher who is himself a student who can teach others to study and think constructively. It is therefore urged that the teacher continue to read for the stimulation of his own thinking books not only of facts about government but of opinion and comment on present day American institutions.

Government is never finished; it is always "a becoming". To know only those forms and institutions which are successful is to fail to lend a hand for the future. The teacher must be as aware of the criticisms as of the perfections. To this end a short list of books for the teacher's reading is appended to this outline. These are chosen not because of the finality of their judgments, but for their possibilities for provoking disagreement and thought.

The following outline for a course in citizenship for naturalization classes is indicative of the kind of study which should be undertaken. The questions at the end of each section have been made as provocative as possible. Their purpose is to invoke discussion and lead to further study. Few could be given a categorical answer, for the answers to many of them are still matters of dispute. However, these are the questions which every American citizen should be attempting to answer for himself. If a class launches into argument, it will begin to need more information and greater understanding will come.

Citizenship is not an accumulation of knowledge; it is a way of life. It is not achieved by learning the constitution by heart, but by active participation in the life of America. The discussion of the topics indicated here will give a man or woman more power for that participation.

After a class has spent a season working on these problems, it will be ready to receive its diploma and to be passed through the courts to undertake the responsibilities of citizens.

During the year 1923-24, conferences were held with the teachers of citizenship and the federal naturalization examiners and an agreement reached whereby teachers would ultimately be relieved of the worry of examinations and the students free to devote all their attention to a study of citizenship which would give them greater power for participation in the life of the community. Important paragraphs of this agreement follow:

Program for State of California.

Education for Foreign-born Persons Who are Applicants for Citizenship in the United States of America.

Purpose: An understanding of the political and social factors which determine the life of a citizen in the American democracy. To learn how to live together in modern America.

Methods: Close cooperation between the schools, the bureau of naturalization and the courts.

Part 1. The Public School.

I. Attendants.

- (a) All applicants for first papers who can be induced to enter the classes.
- (b) All applicants for second papers except those who show exceptional knowledge of American institutions.

NOTE.—Before a man is taken into the naturalization class he should have a thorough working knowledge of English.

II. Length of Attendance.

Until the purpose has been obtained. Course of study to be determined later. Good teaching methods should discourage short term courses of three months as too much like cramming.

III. Organization.

- (a) Carefully graded classes of applicants, of not more than thirty and preferably not less than ten in average attendance in a class, to meet as near as is practicable to the homes of the students.
- (b) Direct continuity between the classes in English for non-English speaking and foreign-born and the class for citizenship. The course of study in the evening school classes for English should be directly linked with that of the naturalization class, and work done in the former should be accepted in the latter as direct preparation for citizenship.

Part 2. The Bureau of Naturalization.

- I. Accreditation of all teachers who have (a) sent forty successful pupils for examination, or (b) taught for two years without the failure of one recommended pupil.
- II. Discreditation of any teacher who has recommended three pupils who fail in any one school year. (Students may come for examination without the teacher's recommendation.)
- III. Occasional visits by naturalization examiners to the classes of accredited teachers to see that the work stays up to standard.
- IV. Granting of certificates of proficiency or diplomas to all students recommended by accredited teachers upon cursory examination.
- V. Examination of all pupils recommended by teachers not yet accredited whether ready to go to court or not, and granting certificates of proficiency or diplomas to all who pass.
- VI. Certificates of proficiency to be binding on all other federal examiners, to be accepted without further examination when or wherever presented.
- VII. Due recognition by the Bureau of Naturalization that knowing the facts of the constitution alone is not sufficient evidence of a man's educational fitness for citizenship as a voting unit in democracy.

Methods of Teaching.

(1) Entirely discussion methods with the introduction of as many controversial and provocative questions as the teacher can formulate, with constructive emphasis.

(2) Class composed, not of teacher and class, but of one group of students searching for the best methods of forwarding the ideals of American democracy.

(3) Subjects for discussion: Everything which affects the welfare of the individual in civilized society—health, safety, transportation, finance, education, justice, etc., as well as questions of control.

The department of naturalization has promised the fullest cooperation with the state department of immigrant education.

Cooperation with Volunteer Organizations and the Community.

One of the most important activities of the state department in the field of immigrant education has been obtaining the support and cooperation of the American community for carrying on this work. However well educated the foreign-born may be, or however eager he may become to make his contribution to American life, unless the American himself shows some willingness to receive him, his education will be futile. The department has therefore been very happy in the remarkable cooperation which it has had with the California Federation of Women's Clubs, the League of Women Voters, parent-teacher associations, and in some communities with the business men's luncheon clubs. The Federation of Women's Clubs has held citizenship meetings all over the state, has furnished funds for initiating school work, has had the most elaborate exhibits of foreign arts and crafts, working side by side with the women of foreign nationalities in preparing for these exhibits. Best of all, it has continuously, year in and year out, educated its own membership in the duties of citizenship of the native-born.

During the coming year the state department is furnishing an outline for the study of American citizenship and political institutions in the clubs all over the state. At the request of the assistant superintendent, the clubs made a contribution which enabled the state department to employ Miss Ethel Swain to write the text of seven sets of lessons for

use in adult classes. These lessons are printed by the state superintendent and sold at cost. The following titles are now being distributed:

- Lessons for Illiterates who speak English.
- Oral Lessons for Beginners—Women's Classes.
- Oral Lessons for Beginners—Rural Classes.
- Lessons for Intermediates:
 - Little Journeys.
 - Biographies.
 - Some Industries of California.
 - California People and Some of Their Laws.

The League of Women Voters has given particular assistance to the new ventures in adult education which will be described later.

In giving a report of a five-year period it is impossible to enumerate the many activities which must be undertaken in order to accomplish anything in a state the size of California. The assistant state superintendent has given hundreds of talks before every sort of organization which could be interested in the subject, has made two trips throughout the east studying the best work done in all the centers of immigration in the United States, has served as vice president of the section on immigration education in the national education association and planned and directed the program of that association at its annual meeting in San Francisco. Pamphlets have been written and edited on the education of the foreign child, the education of the adult, and the work of the home teacher. Statistics have been collected annually from each city school system and high school district and graphs and charts made to show the progress of work and need for further effort. Sums of money have been raised from private subscriptions to carry on temporary experiments and continuous effort made to give to the work broader implications.

Enlarging the Meaning of Adult Education.

After all, the real service of leadership which a state department can render is in sweeping away the obvious definitions of the task and enlarging the vision of its possibilities. In the beginning the practical need of developing a technique for teaching the English language and devising a practical method for administering adult education was the first demand on the time of the assistant state superintendent. In the main, the problems incident to these first steps have been solved. For the past year, whatever freedom there was from the routine of expanding the work into new territory or giving encouragement and stimulation to work already undertaken, has been spent in an effort to give a new meaning to adult education and to remove from immigrant education the peculiarity which it has had, and to exploit it as a basis for an adult education movement which would involve the entire adult population. This can be done in two ways: Wherever immigrant education is carried on in such a way that the night school ceases to be a scholastic institution and takes on a social character, the foreign-born will begin to find expression for its own gifts and endowments. In the eyes of the native population he will be given a new dignity, and an understanding between two groups, naturally antagonistic, can be developed.

The state office has therefore urged, particularly in those country districts where there is a meager social life, that the night school take on a community character and permit as much direction as possible from the people who attend. Letters urging the directors of immigrant education to study the customs and life of the foreign colonies have been sent out, material prepared on these subjects for their use and suggestions of plays and pageants have been distributed from time to time. Most gratifying results could be reported if there were space.

It is not by chance that San Jose has enrolled the largest proportion of its foreign population in the night schools of any community of the state. San Jose has had a long night school history and has had an enviable reputation for the character of its citizenship work. A superintendent with an unusual social vision, who employed as the director of immigrant education a woman of wide European experience as well as much experience of social service in this country, has had much to do with giving San Jose her prominent position. In each of the five centers of work outside the high school, the foreign adults of the neighborhood feel a real responsibility for the conduct of the school. The leaders of the foreign societies all work in close cooperation with the director and from time to time express their spontaneous appreciation of the work of the schools through their own preparation of a celebration to which the school faculty and American community are invited.

Santa Ana has achieved the impossible in developing leadership and capacity for organization among Mexican population, and has created a mutual sympathy between the Mexicans and the native-born that is most unusual.

The neighborhood schools of Los Angeles, with their cottages for centers of Americanization work, the citizenship classes organized as veritable civic bodies, throughout the San Joaquin Valley, are all heartening examples of a new day in adult education.

Universal Adult Education.

The response made by the foreign population has proven to the assistant state superintendent in her four years and a half of service that much power for the future America is being lost if the adult education of the state is to be confined to the education of the foreign-born and to those members of the native-born who are illiterates or interested in increasing their earning capacity through some vocational class. Throughout the world in the last ten years a new attitude has been taken on the relation of the public schools to society. The work of education is not done with graduation from grammar school, or high school, or university. With the complexity of social and governmental organization, with the complete changes effected in daily living through a new discovery like the automobile or the radio, it is necessary that education—even formal education—continue throughout life.

Everywhere in Europe, and in some places in America, adults who have been denied educational advantages in their childhood, or whose education was not adequate for solving the social and economic questions which come before an adult, have sought for a new means of renewing their contact with all the best of man's thought since the beginning of civilization. In order to understand this new movement

and to bring to California an expression of it which is suitable to her genius, the assistant state superintendent made a trip to Europe to study adult education where it had been best developed. In the Workers' Education Association of England, the people's colleges of Belgium, the youth movement in Germany, and the Danish high schools, one finds hundreds of thousands of men and women, many of whom spend all their life working with their hands, giving their evening hours to serious study of literature, politics, economics and science. America, in her prosperity, has not yet felt the need for this kind of an adventure. There is no question, however, that some response would be made if opportunity were given.

During the year 1923-24 an effort has been made to lay the ground for such an enlarged educational program as would create within any adult capable of feeling the need a desire for more knowledge and a better understanding of life. Meetings have been held throughout the year with all the administrators of adult education in various parts of the state, in an attempt to discover the best type of organization for carrying on this work. Adults will never submit to education over which they have no control or to courses selected for them. It will therefore be necessary to use whatever organization there is already in the community to further this program.

The league of women voters has been particularly aggressive in studying the field and in creating an understanding of the importance of the effort. The American federation of labor has already been committed to a program of workers' education to be carried out in cooperation with the extension division of the university. The state department of education has held conferences with presidents or their representatives of all the universities and colleges throughout the state, in order to work out better methods of cooperation between the public schools and the institutions of high education.

During the summer of 1924, the assistant state superintendent has held a class for the purpose of training teachers who could undertake this more advanced field of adult education, and during the winter of 1924-25 the assistant superintendent will cooperate with the cities of Los Angeles, Fresno and San Francisco in carrying on important experiments in this field. In San Francisco, two of the larger public schools will be used as demonstration centers and a course of study developed for adults which will make a clean break with everything which has been formulated in the public schools for children. A new approach to subject matter which is commensurate with the purposes of the adults in the class will give freshness to old material. In Los Angeles, special classes will be organized for various nationalities that have expressed a desire for higher education, and other classes will be held for the young women in the needlework industry who have already expressed their wish for a better understanding of their own future as industrial workers. In all of this, there is only a new application of an old idea. It was Plato who said that the best of education should be given to the rulers of the republic after they were thirty. In the American democracy, where all men are rulers of the republic, the process of education must be continuous and lifelong, and the public school must not be satisfied until it has given to all the men and women in its vicinity a sense of their obligations to be

untiring in their efforts to increase their own knowledge and consequently their own usefulness as citizens.

Respectfully,

ETHEL RICHARDSON,
Assistant Superintendent of Public Instruction,
in charge of Adult Education.

Total: 69 High schools where classes should be offered in 1924-1925.

Respectfully submitted.

ETHEL RICHARDSON,
Assistant Superintendent in charge of
Adult Education.

REPORT OF THE ASSISTANT SUPERINTENDENT OF PUBLIC INSTRUCTION.

In Charge of Statistics and Accounts.

HON. WILL C. WOOD,
Superintendent of Public Instruction.

SIR: Surveys and statistical reports prepared by the Assistant Superintendent of Public Instruction in charge of statistics and accounts are submitted herewith as follows:

First: Survey of Union (Consolidated) Elementary Schools.

Second: Statistical Survey of Junior High Schools.

Third: Statistics of Acceleration and Retardation.

Fourth: Problems of Teacher-Training and Supply.

Fifth: The customary tabular statements reporting the condition, progress, services and financial transactions of all sections of the Public School System, Public School Offices and University of California.

Attention is directed to the fact that the requirements of section 1532 of the Political Code, subdivisions second and third, particularly relating to the date upon which the report of the Superintendent of Public Instruction must be rendered, are practically impossible of fulfillment and should be amended to conform to the present conditions of the public school system.

Respectfully,

A. R. HERON, C. P. A.,
Assistant Superintendent of Public Instruction,
in charge of Statistics and Accounts.

SURVEY OF UNION (CONSOLIDATED) ELEMENTARY SCHOOLS.

(Information for the year 1922-1923 is used as the basis of survey as the same facts for 1923-1924 can not be collected and tabulated in time for publication with this report.)

Values of consolidation of small schools are widely known. Three methods of consolidating the operation of elementary schools are provided in California.

One method is contained in section 1608a of the Political Code, adopted in 1923. This is a simple provision that one school district "may perform school service for another * * * and receive pay from the other * * *", and sets up a prompt and direct process of entering into the necessary contract. This provision, being new, supplies no experience which can be surveyed at this time.

A second plan is contained in section 1617e of the Political Code: and provides that the trustees of one school district " * * * may

enter into contract * * * with any other elementary school district of the county * * * for the education of the children of the first district. The procedure for authorizing such a contract involves an election in the first district, and several necessary later steps. The payment for such service apparently must be made from state and county apportionments. The time for making such contracts effective is somewhat restricted. Relatively few districts have taken advantage of this law and none of them have been included in this survey.

The third method is the one used in the case of each district included in this study. It consists of the formation of a "union" elementary district by two or more separate districts. Each district must vote upon such proposed union. Each district entering such union continues its own existence, and receives its apportionments of state and county aid on the basis of its own average daily attendance. Legal provision for creating union elementary districts are contained in sections 1585 to 1591, inclusive, of the Political Code.

Exhibit I—General Data.

| | |
|--|--------|
| Union elementary districts in state----- | 142 |
| Original districts included in unions----- | *395 |
| Schools maintained by union districts----- | 173 |
| Teachers employed by union districts----- | 851 |
| Pupils enrolled in union districts----- | 26,542 |
| Average daily attendance in union districts----- | 22,587 |

Exhibit II—Districts Included in Union Districts.

| |
|--|
| 76 Unions include 2 original districts each. |
| 38 Unions include 3 original districts each. |
| 17 Unions include 4 original districts each. |
| 6 Unions include 5 original districts each. |
| 4 Unions include 6 original districts each. |
| 1 Union includes 7 original districts. |

Exhibit II shows the composition of existing union districts in terms of the number of original districts which have entered each union district. It will be noted that more than half the existing union districts include two original districts each. Of the 395 original districts now in union districts, 152 are in two-district unions and 114 are in three-district unions.

Exhibit III—Schools Maintained by Union Districts.

| |
|---|
| 128 Union Districts maintain 1 school each. |
| 6 Union Districts maintain 2 schools each. |
| 5 Union Districts maintain 3 schools each. |
| 1 Union District maintains 4 schools. |
| 1 Union District maintains 6 schools. |
| 1 Union District maintains 8 schools. |

Exhibit III shows the number of union districts maintaining one school and those maintaining more than one school.

Practically all the union districts—134 out of a total of 142—employed two or more teachers. The consolidation of two one-teacher districts into one union district did not generally result in a reduced teaching force. Of the existing union districts, 76 consist of two original districts each but only 8 of the union districts were served by

*Five original districts subsequently suspended.

one teacher each. This indicates that the first desire of the districts forming union districts has been to provide better school facilities for their children, not to reduce the cost of such schooling.

Exhibit IV—Statistics of Union Elementary Schools for 1922-1923 Classified According to Size of District Expressed in Terms of Teachers Employed.

| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 |
|-----------------------------|-------------------------------------|---|--|--|--|--|--|
| Number of teachers employed | Number of union districts employing | Total number of teachers employed by such union districts | State enrollment in such union districts | Average daily attendance in such union districts | State enrollment per teacher in such union districts | Average daily attendance per teacher in such union districts | Cost per pupil on average daily attendance |
| 1 teacher.... | 8 | 8 | 165 | 137 | 20.62 | 17.12 | \$143.61 |
| 2 teachers.... | 30 | 60 | 1,369 | 1,125 | 22.82 | 18.75 | 117.64 |
| 3 teachers.... | 25 | 75 | 2,114 | 1,784 | 28.19 | 23.79 | 99.04 |
| 4 teachers.... | 18 | 72 | 2,209 | 1,911 | 30.57 | 25.15 | 82.65 |
| 5 teachers.... | 10 | 50 | 1,569 | 1,350 | 30.14 | 27.00 | 80.20 |
| 6 teachers.... | 6 | 36 | 1,152 | 1,022 | 32.00 | 28.39 | 87.80 |
| 7 teachers.... | 6 | 42 | 1,467 | 1,215 | 34.93 | 28.93 | 72.64 |
| 8 or more teachers.... | 39 | 508 | 16,497 | 14,043 | 32.47 | 27.64 | 77.89 |
| Totals.... | 142 | 851 | 26,542 | 22,587 | 31.18 | 26.54 | \$82.64 |

Exhibit IV presents various facts regarding union districts classified according to the number of teachers employed by the district.

Columns 6, 7 and 8 of this exhibit may be considered in the light of the general average of all elementary schools of the state. In the entire elementary school system, during 1922-1923, the state enrollment was 30.74 pupils per teacher; the average daily attendance was 25.87 pupils per teacher; the cost exclusive of transfers was \$82.57 per pupil. The cost of \$82.64 per pupil in union districts includes certain transfers which cannot readily be segregated; therefore the cost per pupil in union districts is actually slightly lower than in the elementary schools as a whole.

Of the original districts now included in union districts, over two hundred would otherwise exist as one-teacher districts. It is therefore interesting to examine the following 1922-1923 statistics of all one-teacher districts in the state not included in union districts:

| | |
|---|----------|
| Number of one-teacher districts not in union districts..... | 1,850 |
| Total state enrollment in such districts..... | 32,431 |
| Total average daily attendance in such districts..... | 25,395 |
| State enrollment per teacher in such districts..... | 17.50 |
| Average daily attendance per teacher in such districts..... | 14.27 |
| Cost per pupil in average daily attendance in such districts--- | \$117.08 |

It has been impossible to make a direct study of retardation in one-teacher school districts as compared with union districts composed of two or more one-teacher districts. However, it is possible to determine that retardation is relatively higher in one-teacher districts than in larger schools.

In 18 counties, there are 633 elementary districts outside union districts and of this number 537, or 85 per cent, are one-teacher districts. In these counties, on March 1, 1924, 2053 pupils out of a total of 19,368 were "repeating" a grade—taking the same work a second time because of failure of promotion. "Repeaters" were 10.6 per cent of the total.

In one county containing one city of over 50,000 population, 33 districts included in unions, 54 one-teacher districts outside unions, and 21 larger districts, the following is reported:

In the city only, "repeaters" were 666 out of a total of 11,526; "repeaters" were 5.8 per cent of the total.

In the county outside the city "repeaters" were 582 out of a total of 6430; "repeaters" were 9.0 per cent of the total.

From these typical situations it appears that retardation and repetition of grades are likely to be much greater where one-teacher schools are the rule than where they are the exception. Mere size of schools has little direct relation to this relative efficiency. Indirectly, the elimination of one-teacher or one-room schools tends toward increased efficiency, first, by producing conditions likely to attract better teachers, second, by making possible specialization in primary and advanced grades, and third, by providing better equipment and better buildings at less cost.

The saving in building costs which results from one union school serving in place of two or more separate district buildings is a potent factor in promoting union districts. It is in theory partly offset by the cost of transporting pupils to the central location. However, Exhibit IV indicates no increased operating cost from the addition of transportation costs; therefore the economy of consolidated buildings must be accepted as absolute.

A partial survey in 1922 indicated the following facts regarding transportation in the union elementary districts reporting:

| | |
|--|------------|
| Median average distance (one way) of transporting each pupil | 4 miles |
| Median average time (one way) for transporting each pupil | 25 minutes |
| Median cost per pupil per mile for transportation | 3 cents |
| Median number of pupils transported | 55 |

Of the unions reporting in the above survey 24 reported on relative percentages of attendance to enrollment before and after formation of the unions; 20 reported gains and 4 reported losses, the average of all being a gain of 5.4 per cent.

CONCLUSIONS.

Few union elementary districts have been formed since the year 1921-1922. It appears that districts are now inclined to use the simpler provisions of section 1617*c* or section 1608*a* of the Political Code to accomplish the practical results of school consolidation without actual union. A survey will be made in the near future to determine the extent to which the schools are using these legal provisions, and the results of such contracts as have been made thereunder.

STATISTICAL SURVEY OF JUNIOR HIGH SCHOOLS.

Junior high schools have become so important a section of the public school system that statistics regarding them are greatly needed. As constituted, however, there seems to be no opportunity to treat them as a separate classification in the statutory reports. These schools by law include two grades corresponding to the seventh and eighth grades of elementary work and one or two grades of high school work. Distinct requirements exist for the lower two grades in junior high schools, relat-

ing to records of enrollment and attendance, provision of funds, certification of teachers and other matters covered by statute. Apparently it is necessary that all reports relating to junior high schools be so segregated as to include in elementary school reports all data relating to seventh and eighth grade attendance, and in high school reports all data relating to management, and to ninth grade attendance.

Information of prime value in matters of growth, cost, and service of junior high schools in the state as a whole has been difficult to secure, because of this necessity of dual reporting. To provide as far as possible a group of facts reflecting the present condition of junior high school development, the county and local school officers have cooperated with the state office in compiling the data for a special report which is submitted herewith. The report relates to all junior high schools existing as of June 30, 1924.

Limitation of Survey.

This study makes no attempt to treat of strictly educational aspects of the junior high school movement. No effort is made to deal with educational objectives, courses of study, distinctive methods of instruction, or similar problems, which are dealt with in a forthcoming publication of the State Department of Education prepared by the Commissioner of Secondary Schools.

The questions covered by the survey here presented are those that permit of statistical treatment, including types of administration, history, enrollment, attendance, graduations, retardation and acceleration, teaching force, and finance.

Definition.

In other states the term "junior high school" has been used to describe various units of school organization, in most cases consisting of grades seven and eight; grades seven, eight and nine; grades eight, nine and ten, or grades seven, eight, nine and ten. Units organized on the same plan have also been described as intermediate schools or upper grammar schools. In all cases the organization involves the factors of a separate grouping of selected grades for purposes of administration, and a revision of both courses and methods of instruction to suit the needs of the ages 12 to 14 or 15.

In California the grouping of seventh, eighth and ninth grades in "intermediate schools" began as early as 1910. Present legislation, dating chiefly from 1917, defines junior high schools very specifically. In both legal provisions and common usage the name "junior high school" has completely superseded "intermediate school" in this state.

A junior high school in California is a school unit, administered by a high school board, and including grades seven, eight and nine or grades seven, eight, nine and ten. Courses of study for junior high schools are subject to the approval of the State Board of Education in the same manner as those for regular high schools.

In other states, organization of "six-year high schools" has been provided and many such schools exist. Specific authority for such organization is not given in the laws of California; but in many cases junior high schools have been organized and practically attached to a senior high school. In many cases, the same buildings are used, the same principal and teachers serve both schools, and in effect the grades

seven to twelve are comprehended in one school. The state recognizes a junior high school when legally organized, and those attached to senior high schools are included in this survey; but their operation is obviously so different from that of separate junior high schools that separate statistical treatment is used in most phases of the study. Junior high schools reported as attached to senior high schools in the manner described are 27 out of a total of 86 junior high schools in the state.

Method of Establishment.

The law authorizing the establishment of junior high schools provides for their establishment by boards of high school trustees or city boards of education (section 1720, Political Code). In the case of a county or union high school district, the establishment must be by the written consent of a majority of the boards of trustees of elementary districts included in the high school district, or by authority of a majority vote at an election called for that purpose (section 1750a, Political Code). In a district governed by a city board of education the authority is practically automatic as the high school board and the elementary board are identical.

Of the 86 junior high schools existing as of June 30, 1924, 67 are in districts governed by city boards of education; 19 were established by written consent of a majority of the boards of trustees of the elementary districts included; and none were reported as established by authority of a special election for that purpose.

Time of Establishment.

The 86 junior high schools existing as of June 30, 1924, were established as junior high schools or intermediate schools in the years indicated in the following exhibit:

Exhibit No 1—Year of Establishment of Present Junior High Schools.

| School year in which established | Separate junior high schools | Junior high schools connected with senior high schools | Total |
|----------------------------------|------------------------------|--|-------|
| 1923-1924----- | 9 | 5 | 14 |
| 1922-1923----- | 14 | 2 | 16 |
| 1921-1922----- | 5 | 5 | 10 |
| 1920-1921----- | 9 | 2 | 11 |
| 1919-1920----- | -- | 2 | 2 |
| 1918-1919----- | 1 | 2 | 3 |
| 1917-1918----- | -- | 4 | 4 |
| 1916-1917----- | 1 | 2 | 3 |
| 1915-1916----- | 5 | -- | 5 |
| 1914-1915----- | 1 | 1 | 2 |
| 1913-1914----- | -- | 1 | 1 |
| 1912-1913 or before----- | 14 | 1 | 15 |
| Totals----- | 59 | 27 | 86 |

It will be noted that the years during and immediately following the World War are marked by a practical halt in the movement for the establishment of junior high schools. In the two years from 1911 to 1913, there were established almost as many junior high (or intermediate) schools, as during the seven years following. Since 1919-1920, however, the movement has progressed rapidly. Of the junior high schools reported as of June 30, 1924, almost half had been established

within the past three years, and 60 per cent within the past four years.

In addition to the junior high schools included in this survey, the cities of Eureka, Sacramento and San Jose have adopted the reorganization program and will maintain junior high schools during the school year 1924-1925.

Related Senior High Schools.

In high school districts which have established junior high schools there are 67 senior high schools. Of these 27 are directly connected with junior high schools to such an extent that the two constitute virtually one six-year high school. Two others are two-year senior high schools including eleventh and twelfth grades only. Six others are three-year senior high schools including the tenth, eleventh and twelfth grades and not directly related to any junior high school. Thirty-two are full four-year high schools.

Elementary Enrollment in Junior High Schools.

Where junior high schools have been organized in union high school districts, the majority of the elementary districts within the high school districts continue to maintain seventh and eighth grades in their elementary schools. Where junior high schools have been organized under city boards of education, it has been possible in some cases to provide for all of the seventh and eighth grade pupils in the junior high school, leaving to the elementary school organization the responsibility for the first six grades only. The largest city where this accomplishment seems to have been possible is Berkeley. In Los Angeles city, nearly 80 per cent of the total seventh and eighth grade enrollment is reported as being cared for in junior high schools; in Oakland something over 60 per cent; in Fresno approximately 70 per cent; in Long Beach something over 70 per cent; in San Diego approximately 75 per cent. In San Francisco, the establishment of junior high schools has been more recent than in the other large cities. Buildings are being provided for this type of school as rapidly as possible but during the past year only about 10 per cent of the total seventh and eighth grade enrollment was cared for in junior high schools.

It is interesting to note that pupils enrolled in the seventh and eighth grades in junior high schools (including those connected with senior high schools) represent approximately 28.7 per cent of the total enrollment in corresponding grades in the entire state; pupils enrolled in ninth grade in such junior high schools represent approximately 27.8 per cent of the ninth grade enrollment of the state.

The seventh and eighth grade enrollment in these counties in which junior high schools exist represents 72 per cent of the total enrollment in such grades throughout the state. The ninth grade (or first-year high school) enrollment in these counties represents 69.2 per cent of the total ninth grade enrollment of the state.

In two of the 25 high school districts where junior high schools have been established, operation of the junior high school is not reported in such a manner as to permit of tabulation, due to incomplete organization.

In the 33 high school districts where junior high schools have been operated to an extent to permit tabulation, including junior high schools connected with senior high schools, the following results appear:

Eleven of the 33 districts indicate all their seventh and eighth grade pupils as being in junior high schools.

Three of the 33 districts report 90 per cent to 99 per cent of their seventh and eighth grade pupils as being in junior high schools.

Seven of the 33 districts report 61 per cent to 80 per cent of their seventh and eighth grade pupils as being in junior high schools.

The 21 districts reporting as above include about 96 per cent of the total junior high school enrollment of the state.

Ninth Grade Enrollment in Junior High Schools.

Greater progress appears to have been made in providing for inclusion of ninth grade (or first-year high school) pupils in the junior high schools, compared with inclusion of seventh and eighth grade enrollment, as indicated by the following:

Sixteen of the 33 districts report all of their ninth grade pupils as being in junior high schools.

Two of the 33 districts report 81 per cent to 90 per cent of their ninth grade pupils as being in junior high schools.

Four of the 33 districts report 61 per cent to 80 per cent of their ninth grade pupils as being in junior high schools.

Seven of the 33 districts report less than 40 per cent of their ninth grade pupils as being in junior high schools.

Teachers in Junior High Schools.

The types of certificates held by teachers employed in junior high schools indicate clearly the process of transition through which such schools are passing. Laws governing the employment of teachers in junior high schools permit holders of general elementary certificates to teach in grades of junior high schools corresponding to the seventh and eighth grades of the elementary school; authorize holders of special elementary certificates to teach in all junior high school grades the special subjects named in such certificates; provide for a junior high school credential authorizing the holder to teach in any grade of a junior high school or an elementary school; and authorize holders of secondary credentials to teach in any elementary or secondary grades including the junior high schools.

Relatively few junior high school teachers employed during 1923-1924 were holders of junior high school certificates. This condition raises an interesting question, inasmuch as this type of certificate and credential is designed especially to serve the needs of these schools. At least two factors are represented in the explanation: first, the recent establishment of this type of credential, and second, an apparent policy in some districts to establish a standard for junior high schools fully equal to that for senior high schools. For instance, in one large city employing 602 teachers in junior high schools not connected with senior high schools, 346 of those teachers have regular secondary (high school) certificates, 253 have special secondary certificates (covering the teach-

ing of special subjects in high schools) and 3 have regular elementary certificates, and none have junior high school certificates.

The following table indicates the various types of certificates held by all teachers in junior high schools not connected with senior high schools. Similar information for junior high schools connected with senior high schools has not been tabulated for the reason that the faculties of such schools are usually identical in large measure with those of the associated senior high school.

Exhibit No. 2—Types of Certificates Held by Teachers in Junior High Schools Not Connected With Senior High Schools, During the Year 1923-1924.

| Certificate | Number holding | Per cent of total |
|--------------------------|----------------|-------------------|
| Regular secondary | 695 | 39.8 |
| Junior high | 205 | 11.7 |
| Regular elementary | 170 | 9.7 |
| Special secondary | 646 | 37.0 |
| Special elementary | 32 | 1.8 |
| Totals | 1,748 | 100.00 |

Acceleration and Retardation in Junior High Schools.

Included in the survey of acceleration and retardation which is a part of this report are items of information bearing on the results of junior high school establishments in the saving of time of pupils. Exhibit No. 3 below deals with acceleration and retardation of seventh grade pupils in counties where junior high schools exist as compared with counties where no junior high schools exist. Exhibit No. 4 presents similar facts regarding eighth grade pupils.

Exhibit No. 3—Acceleration and Retardation of Seventh Grade Pupils as of March 1, 1924.

| | In all counties having junior high schools | In all counties not having junior high schools | Total in entire state |
|--|--|--|-----------------------|
| Percentage of pupils accelerated | 7.07 | 5.12 | 6.50 |
| Percentage of pupils of normal ages | 58.31 | 55.10 | 57.37 |
| Percentage of pupils retarded | 34.62 | 39.78 | 36.13 |
| Percentage of pupils repeating grade | 5.18 | 9.68 | 6.50 |
| Percentage of pupils taking two grades in year | 3.03 | 2.73 | 2.94 |

Exhibit No. 4—Acceleration and Retardation of Eighth Grade Pupils as of March 1, 1924.

| | In all counties having junior high schools | In all counties not having junior high schools | Total in entire state |
|--|--|--|-----------------------|
| Percentage of pupils accelerated | 7.48 | 5.77 | 6.97 |
| Percentage of pupils of normal ages | 60.81 | 56.34 | 59.47 |
| Percentage of pupils retarded | 31.71 | 37.80 | 33.56 |
| Percentage of pupils repeating grade | 3.83 | 7.85 | 5.03 |
| Percentage of pupils taking two grades in year | 3.22 | 3.08 | 3.18 |

Factors other than junior high school organization undoubtedly influence the conditions above noted. However, after allowing for all other measurable influences, it is clear that those areas which care for large portions of their seventh and eighth grade children in junior

high schools are thereby effecting very definite gains in eliminating retardation and repetitions of grades.

This is even more obvious when consideration is given to the length of time junior high schools have been in operation in the various counties, and the extent to which such schools care for the seventh and eighth grade pupils. Junior high schools in one of the largest counties date from 1922-1923 only, and in 1923-1924 included less than 10 per cent of the seventh and eighth grade pupils. If that county be eliminated from the junior high schools, the remaining counties will show the following results:

| | Seventh grade pupils | Eighth grade pupils |
|---|-------------------------|------------------------|
| Percentage of pupils accelerated..... | 7.52 | 7.81 |
| Percentage of pupils of normal ages..... | 58.68 | 60.15 |
| Percentage of pupils retarded..... | 33.80 | 32.04 |
| Percentage of pupils repeating grade..... | 4.37 | 3.65 |
| Percentage of pupils taking two grades in year..... | 3.23 | 3.44 |

The omission of the county referred to in the foregoing also minimizes any doubt of the value of the comparisons, based on the assumption that counties having junior high schools are also the largest counties. The probably higher degree of retardation in small schools is also discounted by including the entire seventh and eighth grades of each county having junior high schools, although such counties also contain 483 one-room schools not in union districts.

It should be possible in the future to make a segregated report on retardation of seventh and eighth grade pupils in junior high schools for comparison with similar data in regular elementary schools. From the data now available, however, there is a definite indication that the junior high school aids directly in reducing loss of time due to retardation and failure of promotion.

Promotions From Eighth Grade.

With the adoption of junior high school organization, the end of the eighth grade ceases to be a point of completion or "graduation." The end of the ninth grade takes its place in the thought of both pupils and public as the point of passage from school to school with importance similar to elementary school graduation under the old type of organization.

The junior high schools report that during the year 1923-1924 a total of 11,710 of their pupils completed ninth grade. Of these 10,660 were in junior high schools not connected with senior high schools, and 1050 in junior high schools connected with senior high schools.

Promotions from eighth grade, or the number of pupils completing eighth grade, in junior high schools, is reported definitely for all but four junior high schools enrolling 1335 in the eighth grade. Including the incomplete figures for those schools, the reports indicate that 13,859 pupils completed eighth grade in junior high schools during the year 1923-1924.

This figure is practically subject to comparison with the total enrollment in the eighth grade in junior high schools, namely, 17,961. On this basis, the number completing eighth grade in junior high schools

was 77.16 per cent of the total number of individuals enrolled in eighth grade in such schools during the year.

In all schools of the state, including junior high schools, the individual enrollment in eighth grade during the year was 60,726; the number of graduates was 46,413, or 76.43 per cent, a slightly smaller percentage than in the junior high schools. In addition to this should be considered the fact that "promotion by subject" in most of the junior high schools transfers a large number of pupils to advanced work in certain subjects without recording such pupils as "graduating" from, or completing, the eighth grade.

Financial Data.

From the standpoint of finance, those junior high schools which are administered in direct connection with a senior high school present conditions entirely different from those of separate junior high school units. The organizations connected with senior high schools are in many cases not properly defined as "junior high schools."

Of the 27 schools reported as junior high schools connected with senior high schools, ten (10) are in districts serving rural or semirural communities, and have an average enrollment of less than 122, or an average of about 40 to each grade.

Costs of operation of junior high schools connected with senior high schools are not reported with sufficient definiteness to permit tabulation. In most cases it appears that costs of such junior high schools can not be accurately separated from those of the senior high schools. For all practical purposes, it is apparent that financial features of this survey will be more valuable if confined to those junior high schools which are distinctly of the type described in the law and whose financial records are definite.

Of the 59 junior high schools reported as distinct from senior high schools, one was operated for too short a period to provide any report. Three (3) of the other 58 report maintenance of seventh, eighth, ninth and tenth grades. Statistics for these three schools are presented separately from those of the three-year junior high schools, in Exhibit No. 5 of this survey.

Conclusions.

The nature of this survey leaves untouched many points which are of great interest to educators and administrators. The limitations of the work prevent definite conclusions on many questions of both public and professional interest. Certain facts, however, may be stated as a summary of the study.

First, the junior high school movement in California is progressing so rapidly that it will soon be universal in areas where enrollments of 200 or more are available for junior high school grades.

Second, the cost is, and will continue to be, considerably greater for seventh and eighth grade pupils than under elementary school organization. The average per capita cost in junior high schools not connected with senior high schools is \$124.91. The average tuition for seventh and eighth grade pupils, based on local elementary costs, is \$58.52. The average per capita cost in all the elementary schools is \$81.24. The higher cost in junior high schools must be justified by the measurably greater value of the educational service.

Third, the cost in junior high schools is very much lower than in senior high schools—\$124.91 compared with \$211.82. This constitutes a saving in the case of ninth grade pupils largely offsetting the increased cost for seventh and eighth grade pupils.

Fourth, relatively lower costs for buildings and plant are indicated for junior high schools compared with senior high schools.

Fifth, junior high schools apparently improve educational service as measured by training of teachers, promotion of pupils, acceleration and retardation, and repetitions of grades.

Sixth, for purposes of economy, better administration and more accurate measurement of results, future legislation should provide for separate treatment of junior high schools in matters of legal control, apportionment of funds and statistical reports.

STATISTICS OF ACCELERATION AND RETARDATION.*

Reports of ages of all pupils in elementary schools on March 1, 1924, were collected by county superintendents of schools and transmitted to the state superintendent. A total of 584,968 children in grades one to eight inclusive were reported upon. A small additional group in ungraded classes was also reported upon but has been omitted from the tabulation.

So far as known, every child in the public elementary schools of the state on March 1, 1924, is included in these reports, with the exception of two one-teacher schools. The number covered by this survey is so large that it has been considered wise to analyze the results in some detail. The resulting tabulations are submitted as exhibits of this report.

Explanation of Terms.

Ages of children are reported in accordance with explicit instructions to teachers, simplified by a table indicating clearly, for purposes

*The Department of Education acknowledges with thanks the kindness of Dr. Virgil E. Dickson, Deputy City Superintendent of Schools and Director of the Bureau of Research and Guidance of the Oakland City Schools, in conference and suggestion upon the subject of this report.

of the report, the age on March 1 of a child born on any given date. The statistical age then represents an actual age ranging from one-half year younger to one-half year older than the statistical age. Thus, the number reported as seven years old includes all who on March 1 were between six and one-half and seven and one-half; eight years old includes all between seven and one-half and eight and one-half.

"Normal ages" as used for respective grades are those which are nationally accepted as the result of general experience. In terms of actual years, such "normal years" are as follows:

| | | |
|---------------------|------|------------|
| First Grade ----- | ages | 5½ to 7½ |
| Second Grade ----- | ages | 6½ to 8½ |
| Third Grade ----- | ages | 7½ to 9½ |
| Fourth Grade ----- | ages | 8½ to 10½ |
| Fifth Grade ----- | ages | 9½ to 11½ |
| Sixth Grade ----- | ages | 10½ to 12½ |
| Seventh Grade ----- | ages | 11½ to 13½ |
| Eighth Grade ----- | ages | 12½ to 14½ |

Probable Causes.

The tabulations of acceleration and retardation are presented at this time without the accompaniment of studies as to causes. Certain outstanding situations, however, demand some consideration aside from the mere figures.

It is found that in some counties where school equipment is poor, where most of the teachers are undertrained and where attendance records are low, there is nevertheless a low percentage of retardation and of pupils repeating a grade, or failing of promotion. The assumption is almost automatic that the poorer school facilities in some of these counties are accompanied by a lower standard for promotion of pupils.

Foreign Children.

Certain counties whose percentages of pupils retarded are extremely high are evidently serving as frontiers in the assimilation of foreign groups; schools equipped for the education of American born English speaking children are failing to serve as fully the needs of foreign born. Presumably the large elements of foreigners in many of the counties will swell the "retarded" groups for the additional reason that many of them have been deprived of opportunities for continuous school in previous years.

Other counties having relatively high school standards still show high percentages of retardation. In some instances considerable groups of migratory laborers are known to be required for the agricultural needs of such counties. The deficiency of school opportunities of children of such families may bear some relation to the retardation.

Comparison of Boys and Girls.

An interesting ratio is shown between records of boys and girls. Girls exceed boys in the percentage accelerated, the percentage of normal ages, and the percentage taking two grades in one year, and show smaller percentages than boys in those retarded and those "repeating" a grade. In all grades, 35.02 per cent of the boys are

retarded as compared with 28.42 per cent of the girls. The "repeaters" among boys are 11.55 per cent of all boys, and among girls only 8.94 per cent. These marked differences appear as early as the first grade, where retardation is 22.69 per cent among boys and only 18.83 per cent among girls, and where "repeaters" are 21.20 per cent of all boys and only 17.55 per cent of all girls. How fully this difference in progress is explained by natural differences in rates of maturity is not definitely ascertainable. Whether any part of it may be due to a tendency to adapt the schools more directly to the needs of girls than of boys may be worthy of consideration in future studies.

Periods of Greatest Acceleration and Retardation.

It will be noted that retardation reaches a maximum among both boys and girls in the fifth grade. It is known that a habitually retarded pupil is likely to spend an average of 1.5 to 2.0 years in each grade. Entering school at six or later, many such pupils will have spent so much time in grades one to five that the end of the fifth grade finds them at the limit of the compulsory education age; they accordingly "drop out" and do not appear in the record of later grades, thus tending somewhat to reduce the retardation above the fifth grade.

The percentage of pupils accelerated increases in each grade to the eighth, a natural result of the added opportunity for such progress offered by each successive year in the pupil's life.

Repetition of grades, or failure of promotion, is greatest in the first grade, while pupils are experiencing the transition from home life to school life, and the resulting readjustment, and is consistently reduced through all grades to the eighth. The first grade in school marks the earliest general application of any standard of accomplishment and reflects the inevitable differences between children, which differences are not recorded prior to school entrance. The only criterion for a child entering the first grade is age. His promotion from the grade depends upon accomplishment. Since the accomplishment of children in first grade hinges upon numerous factors such as native endowment, previous training, health, and irregularity of attendance, it is but natural that all of these operating together will produce a large percentage of failure.

Percentages taking two grades in one year are substantially constant in all grades from the second to the eighth, being generally slightly higher among girls than among boys.

Use of the Facts.

It is recognized that such age grade studies as this do not reveal whether instruction is good or bad in a school, nor do they show whether or not the work in any grade is up to standard. They do show the speed with which children move through the school and, still more important, they reveal something of the physical maturity of individuals who are thrown together to work as a group. Retardation, measured by chronological age, is not a sure measure of the service rendered by the schools. There is, however, some relationship between such retardation and the degree to which the schools have adjusted themselves to the needs of the pupils retarded. It is conceivable that a pupil fourteen years old in the fifth grade may be receiving there the most valuable instruction which the school can give him. It is more likely, however,

that he is entitled to a modified or altered schooling to fit his individual needs, rather than to be required to spend years repeating work which he can not successfully accomplish, at the same time serving as a drag upon all other pupils in the fifth grade class. In the promotion or failure of pupils, greater attention must be paid in the future to the factors of physiological and social adjustment of each child to the class in which he must work.

Studies of retardation may, therefore, serve to call attention to situations where large numbers of pupils in the schools are not receiving instruction fitted to their respective needs and capacities.

The importance of such situations may be emphasized by the cost feature. The direct and actual cost of teaching the same grade a second time to 60,163 pupils, at the average cost per pupil, is as great as the cost of maintaining all the elementary schools in the San Francisco and Santa Clara counties, or all the elementary schools in the Sacramento valley, or more than five times the entire cost of the state teachers colleges during the year 1923-24.

More serious, however, is the indirect economic cost of the loss of time of these 60,163 repeaters and over 186,000 retarded pupils. The principles of genuine economy demand that a pupil who lives through a year only once shall not be required to waste that year or any part of it in repeating needlessly the work of a grade.

In so far as retardation is the result of conditions within the school, it is obvious that true economy in education will result from the provision of better trained teachers through an adequately financed teacher-training program; through better supervision and adjustment within the schools by means of adequate provision for county, city or district supervision; and through provision of well adapted modern textbooks in ample number. Expenditures for these purposes represent investments which will directly contribute to a reduction of failures and retardation.

Exhibit No. 1.—Acceleration and Retardation of Pupils in Elementary Grades as of March 1, 1924, Classified by Counties.

| Counties | Pupils accelerated | | Pupils of normal age | | Pupils retarded | | Pupils repeating grade | | Pupils taking two grades in year | |
|-------------------|--------------------|----------|----------------------|----------|-----------------|----------|------------------------|----------|----------------------------------|----------|

PROBLEMS OF TEACHER SUPPLY AND TRAINING.

Various estimates have been made of the number of new teachers needed annually to serve the public schools in California. By careful analysis of records of the Teachers Retirement Salary Fund Board for the years 1921-1922 and 1922-1923, information on this subject has been obtained in more accurate and specific form than by any previous study. Presented herewith are, first, the most complete estimate previously made on the basis of general facts, and, second, the actual result of the study of two years' experience.

The following is a condensed summary of the estimate prepared in 1923 by the Deputy Director of Education, dealing with elementary schools only:

During the next ten years California must have 34,851 new teachers for elementary schools—8291 for new positions, 26,560 for replacements.

For New Positions.

During the past 14 years (from 1907-1908 to 1921-1922) the average biennial increase in the number of teaching positions in the elementary schools has been 10.879 per cent—almost 11 per cent increase each 2 years.

Assuming that the increases of the past 14 years have been abnormal and that for the next 10 years the increase will be only 8 per cent each 2 years, the number of *new positions* in the elementary schools for which teachers must be provided will be 8291.

For Replacements.

A study of records of graduates of one California normal school approximately 45 years after its establishment showed that the average teaching life of graduates to that date was less than 6 years.

Another California study indicated an average teaching life of 3 years among teachers of rural schools.

A survey for the Public School Teachers Retirement Board indicated yearly withdrawals and deaths approximating 16 per cent of the teachers employed.

Studies elsewhere in the United States indicate an average teaching life of 3 to 6 years.

It is conservative to estimate that replacements in California elementary schools must be 15 per cent of the total number employed each year. To be still more conservative it may be assumed that the replacements will not apply to the 8291 new positions.

On this basis, replacements alone for the next ten years will require 26,560 new elementary teachers.

The following specific facts are secured by the study of the records of the Teachers Retirement Salary Fund Board for the years 1921-1922, and 1922-1923, and corresponding official statistics:

During the year 1921-1922 there were employed in the kindergarten, elementary and high schools, a total of 25,040 teachers.

Of this number approximately 1200 were exempt from contributing to the retirement fund and approximately 23,840 were contributors.

Of these 23,840 who were contributors in 1921-1922, a total of 3162 did not contribute (and therefore were not employed) during 1922-1923.

Therefore, the actual number withdrawing from service was 13 per cent of the number employed.

The withdrawals among the "exempt" teachers would be greater in proportion, as all such teachers were in service before 1913.

The records are not segregated to show elementary teachers as a

group. Observation indicates that withdrawals are more frequent among elementary teachers than high school teachers. No attempt is made to estimate the percentage of withdrawals among elementary teachers separately. The record of 13 per cent among all classes of teachers is accurate and sufficient.

Compared with the total of 25,040 teachers employed in 1921-1922, there were 28,283 teachers employed in 1922-1923—an increase of 13 per cent representing 3243 new positions.

For the year 1922-1923, therefore, the State of California was obliged to secure 6405 new teachers for kindergarten, elementary and high schools (aside from replacements of teachers exempt from the retirement fund contributions).

The teachers employed in 1921-1922 were distributed as follows:

| | |
|------------------------------|-------------|
| In kindergarten schools----- | 3 per cent |
| In elementary schools----- | 71 per cent |
| In high schools----- | 26 per cent |

While recognizing that high schools are growing more rapidly than others, it is certain that nearly 70 per cent of the new teachers were needed for elementary schools—or approximately 4500 new elementary teachers.

To meet this need the state has provided seven state teachers colleges and the teachers college at the Southern Branch of the University of California. All these institutions combined were able, with the funds provided for 1922-1923, to supply less than 1500 teachers trained to teach in elementary schools—about one-third of the number needed. Private and other institutions supply a negligible number.

California is still depending on other states to train the vast majority of her teachers. To induce well-trained teachers to come from other states California must offer more attractive salaries as well as more attractive climate. From the standpoint of mere financial saving, it will obviously be less expensive finally for California to provide the necessary funds to enable her teachers colleges to train more instead of fewer of the young people of this state to teach in the schools of this state.

Too much importance can not be attached to the fact that the progress of California in improving the standard of training of elementary school teachers has not only been checked during the present biennium but that there was an actual though slight lowering of the standard. During the school year, 1920-21, 80.8 per cent of the teachers employed in the elementary schools were graduates of a normal school or college. For the school year, 1921-22, this standard had been improved so that 85.1 per cent of the teachers employed in the elementary schools were graduates of normal schools or colleges. The biennium covered by this report reflects very definitely the failure of California to provide adequate teacher training facilities to meet the increased needs of the schools. The percentage of elementary teachers employed who were graduates of a normal school or college was actually smaller each year than in the preceding year—84.6 per cent in 1922-23 and 84.4 per cent in 1923-24 as compared with 85.1 per cent in 1921-22.

SECTION IV. STATISTICS OF SECONDARY SCHOOLS.

TABLE No. 16-C.

State Enrollment in All High School Departments and Classes, in High School Junior Colleges and Post-graduate High School Classes, Classified by Sex and by Grade, for the School Years Ending June 30, 1923, and June 30, 1924.

| | 1922-1923 | 1923-1924 |
|---|-----------|-----------|
| Enrolled in Regular Day High Schools. | | |
| First year— | | |
| Male | 26,493 | 29,123 |
| Female | 27,333 | 30,088 |
| Second year— | | |
| Male | 17,491 | 19,987 |
| Female | 18,908 | 21,187 |
| Third year— | | |
| Male | 12,126 | 13,802 |
| Female | 13,342 | 15,491 |
| Fourth year— | | |
| Male | 8,915 | 10,140 |
| Female | 10,335 | 11,750 |
| Specials— | | |
| Male | 970 | 1,039 |
| Female | 1,359 | 1,235 |
| Totals— | | |
| Male | 65,995 | 74,091 |
| Female | 71,277 | 79,751 |
| Totals, male and female | 137,272 | 153,842 |
| Enrolled in Special Day and Evening Classes. | | |
| Male | 17,661 | 18,133 |
| Female | 19,408 | 20,913 |
| Enrolled in Compulsory Part-Time Classes. | | |
| Male | 9,433 | 10,413 |
| Female | 6,751 | 8,106 |
| Totals in special and part-time classes | 53,253 | 57,565 |
| Enrolled in Junior College Departments. | | |
| First year— | | |
| Male | 518 | 545 |
| Female | 536 | 579 |
| Second year— | | |
| Male | 203 | 269 |
| Female | 159 | 225 |
| Totals— | | |
| Male | 721 | 814 |
| Female | 695 | 804 |
| Totals, male and female | 1,416 | 1,618 |
| Enrolled in Evening High Schools. | | |
| Male | 43,591 | 51,183 |
| Female | 34,562 | 41,935 |
| Totals, male and female | 78,153 | 93,118 |
| Grand Total High School Enrollment, including Regular Day High Schools, Special Day, Evening and Part-time Classes, Junior College Departments and Evening High Schools. | | |
| Male | 137,401 | 154,634 |
| Female | 132,693 | 151,509 |
| Total, male and female | 270,094 | 306,143 |
| Enrolled in Post-graduate High School Classes. | | |
| Male | 15 | 18 |
| Female | 47 | 19 |
| Totals, male and female | 62 | 37 |

SECTION IV. STATISTICS OF SECONDARY SCHOOLS.

TABLE No. 24-F.
Grounds and Property.

| | 1922-1923 | 1923-1924 |
|--|----------------|----------------|
| Area of grounds, acres..... | 131.35 | 131.35 |
| Value of grounds, buildings and equipment..... | \$1,335,000.00 | \$1,335,000.00 |

(Note: Chapter 899, 1921, provides for division of land for the separate School for the Blind. The division made leaves all present structures on the property reserved for the use of the Deaf, but the buildings are now used jointly by the two schools. For this reason, no division of the valuation of the property is submitted.)

SUMMARY No. 1.

Kindergarten Schools.

| | 1922-1923 | 1923-1924 |
|---|----------------|----------------|
| Number of counties maintaining | 43 | 45 |
| Number of separate kindergartens | 653 | 658 |
| Number of teachers employed (all women) | 893 | 977 |
| Number holding certificates for kindergarten and first three grades | (a) 798 | 150 |
| Number holding certificates for kindergarten and first grade | | 476 |
| Number holding special certificates for kindergarten only | 95 | 351 |
| Number of pupils enrolled: | | |
| Boys | 21,538 | 25,318 |
| Girls | 22,136 | 26,065 |
| Totals | 43,674 | 51,383 |
| Average daily attendance | 22,974 | 26,763 |
| Average number of days schools were open | 183 | 183 |
| Number of visits by county superintendents | 684 | 944 |
| Number of visits by school trustees | 549 | 692 |
| Number of books in libraries | 2,828 | 5,546 |
| FINANCIAL STATISTICS. | | |
| Receipts— | | |
| Balance on hand | \$383,819 02 | \$415,700 97 |
| Taxes for maintenance | 2,293,645 50 | 3,080,930 95 |
| Special taxes for buildings | 3,452 00 | 692 39 |
| Donations and miscellaneous | 3,248 05 | 6,762 94 |
| Totals | \$2,684,164 57 | \$3,504,087 25 |
| Expenditures— | | |
| Salaries of teachers | \$1,369,688 38 | \$1,533,982 71 |
| Contingent expenses (b) | (c) 794,714 24 | 560,803 03 |
| Sites, buildings and furniture | 95,412 25 | 144,603 78 |
| Library books | 511 32 | 1,822 48 |
| Apparatus | 8,308 54 | 16,717 70 |
| Transfers and payments to school districts | | 796,487 47 |
| Totals | \$2,268,634 73 | \$3,054,417 17 |
| Balance unexpended | \$415,529 84 | \$449,670 08 |
| Average cost per pupil (exclusive of transfers and outlays) on average daily attendance | (c) \$94 59 | \$78 96 |
| Valuation of property— | | |
| Sites and buildings | \$281,268 00 | \$302,954 00 |
| Library books | 16,763 00 | 9,125 00 |
| Furniture, apparatus and equipment | 148,904 00 | 172,341 00 |
| Totals | \$446,935 00 | \$484,420 00 |
| Average salary paid supervisors | \$2,012 74 | \$2,032 40 |
| Average salary paid principals | 1,617 41 | 1,630 00 |
| Average salary paid regular teachers | 1,422 49 | 1,437 00 |

(a) Certificates for kindergarten—primary reported in 1922-1923 without segregation.

(b) Includes supplies, rents, etc.

(c) Includes certain transfers not reported separately for 1922-1923.

SUMMARY No. 2.

Elementary Schools.

| | 1922-1923 | 1923-1924 |
|--|-----------------|-----------------|
| Number of school districts— | | |
| Regular active—not in union districts..... | 2,965 | 2,927 |
| Regular active in union districts..... | 390 | 412 |
| Active union districts..... | 142 | 149 |
| Joint districts (included in above active districts)..... | 66 | 66 |
| Suspended districts—not in union districts..... | 133 | 124 |
